From: Eric Trowbridge <jbart@bigsky.net>
Subject: GO CODE !!! GO CODE !!!

I am so happy that code is a requirement for the best portions of the Amateur radio spectrum that I wish that there would be more testing that required code. GO CODE, GO CODE Onward and most of all upward learn it or stay on the frequencies that are more appropriate for you so that you can't propagate bad and poorly referenced information about code. Fortunately anyone that has done the code and is on the H.F. frequencies never complains about learning it, they may not use it but they don't complain. Notice the people who complain about it have to do it on the internet because the frequencies that they use won't get the job done otherwise, as for their belly-aching and complaining mentality so what, learn code or stay off H.F. simple isn't it. GO CODE !!! GO CODE !!!

Eric KC7YGH
Code knowledge and proud of it!!!

From: moler@battelle.org
Subject: Opinions of TS-680

I'm considering purchase of a Kenwood TS-680S. This is a general coverage HF transceiver and covers 160m-6m. It is the twin to the Kenwood TS-140S which doesn't cover 6m.

I have seen the review done in QST in Oct 1988, but I'd like anyone who has any experience with this rig to give me some additional feedback on it's performance and user satisfaction. Thanks in advance.

Most large electrical supply houses will carry them. The one I like is made
by Delta Arrestors of Big Spring Texas. Cheap and effective. But there are
others.

There are preamp projects in The Satellite Experimenter's Handbook, The
Proceedings of the Central States VHF Society, and The VHF/UHF Dx Book,
among other places. There are also suitable designs in *older* ARRL Handbooks.
There was recently a MMIC preamp in QST, but that won't have a low enough
noise figure to improve on an ordinary receiver at 70 cm. A few suitable
preamps
have appeared in QEX. You really want a GASFET design. Far Circuits offers
circuit boards for some of these preamp projects.

There are a number of companies which sell preamps. SSB Electronics and
Advanced Receiver Research are well known, and make good ones. Expect
to pay from $80 to nearly $200 for these, however. One of the few Hamtronics
kits worth buying is their helically filtered 70 cm preamp. This is a good
unit,
and fairly cheap too. Forget the Ramsey junk.

Subject: How much power do aircrafts TX?

On 5 Dec 1997 04:27:41 GMT, kn6epsac@aol.com (KN6EPSac) wrote:

>Been curious about this for a long time. WHY is all aircraft Tx AM and not
FM?

It is primarily just a historical artifact. Back when they started putting
radios in airplanes, AM was the dominant voice mode, so the radios
were AM. Inertia, and a very large installed base, has kept it that way.
AM is generally "good enough" for air to ground communications, and
it does fit in a somewhat smaller amount of spectrum than FM.

There are a couple of other incidental benefits as well. The constant
AM carrier makes DFing fairly easy. And there is no FM capture
effect, so doubling is detectable, and often one can copy both signals
rather than just the stronger one. This has a safety benefit. AC could
switch to SSB, and they have for long HF circuits, but that loses the
ability to DF the signals easily because of the lack of a constant
carrier.

Replacing 570S Battery

Go to your local battery supplier and get a CR2032 Lithium Battery. RS
and most drug stores carry them.

Do the following in exact order.
1. Remove the top and bottom covers.
2. Remove the two brass-colored screws at each side of the top side
brackets holding the front panel to the main chassis. Loosen the two
brass-colored screws at the side bottom brackets (with a slot on each
side) holding the front panel.
3. Hook up the power supply to the radio and turn on the power supply.
4. Turn on the radio and then turn it off (leave the power supply on)
5. Slide the front panel forward and tilt it down and the battery can be
seen in it's holder---most likely a black plastic holder. Replace the
battery.
6. Turn on the radio and turn it off.
7. Replace screws and covers and you're back in business.

Subject: lightning strike detection

Does anyone know of a system for detecting lightning strikes within a
pre-defined area which displays the results as a 3D image on a computer?
There used to be a company in Texas that supplied such a kit in the
early 1980's. It involved placing 4 RX masts around a town and combining
the info from all 4 to generate a 3D map.
Any suggestions?

David Shenton.

I think this is the link that you will be most interested in:
http://www.glatmos.com/products/data/thunder.html

I have a friend who manages the transmission and distribution power grid for a large electric power company. He took me to the Control Center one night during a thunderstorm, and showed me the lightning detection system. Very impressive. The screen looked very similar to the screen shot on this webpage.

Some FACTORY.TPL will not be usefull to you, you will probably
not be able to upload it (who knows what mod you are in)

> p.s. Yes, I did turn the squelch off when trying to upload.
> No hardware mods have been done.
>
> Any help would be appreciated.
>
> Larry
> N1ZGI

Do as follows:

Find e HEX editor.

1. Start the FT50 Programmer and save this as BLANK.RDF
(Start and save (BLANK.RDF is a empty .RDF))
2. Make a Template from your FT50, name it MY.TPL
3. Read from the MY.TPL the bytes on adress 05E2 and 05E3
(let's call them value1 and value2)
4. Edit the BLANK.TPL and set the byte on adress 05E2 to be
value1 and the byte on adress 05E3 to be value2
Change the first 3 letters in BLANK.RDF from RDF to TPL
5. Rename BLANK.RDF to BLANK.TPL
6. Upload the BLANK.TPL to the FT50

Everything will be normal now.

Don't play with the "Pull the cable out method"

Read the following info:

FT50R - Software Modifications
Ingra-Beton@t-online.de, Date: 31.03.97
==========
This is modification of the first version, with same fix up's, typing
error corrections and better explanations (one Example too).

The Problem:

I have purchased a FT50R a couple of days ago and tried to make the MOD's
as described by Bill Childers (KE6VVW).

The removal of the solder jumper Nr.1 worked just fine and the
MARS/CAP was there. But as I tried to make the Trick to pull the
adapter cable out of the radio, ..., that don't work.

RT Systems says:
> The firmware inside the radio has been changed so that pulling the plug
> will not toggle the radio into a European mode. This change was made in
> radios with the 3rd and 4th digits of the serial number greater the 05.
> --
> Rod, RT Systems Amateur Radio Supply, Huntsville AL.
> Sales 1-800-723-6922, Tech 1-205-880-3093

So I had to find something else, here it is.

This is a method to do any MOD to your FT50R. The procedure is very simple
and fast done:

1. You make a template from your FT50R
2. Change 3 Bytes in the template
3. Upload the template to your FT50R

So you can switch to any BAND, you don't have do hardware interventions
or similar staff like pull the adapter cable out, ...

If you want do return the FT50R to its original state, just upload the
old (unmodified) .TPL to the Unit.

Information and explanations:

All MOD's can be made by software only. To do the MOD's you need the
ADMS 1C Software (I am using the 1.05 Version) and a HEX editor to
manipulate the .TPL file (I am working with .TPL file's only)
I am using HIEW 5.24 (Hacker's View) but any HEX editor will do the
job (PCT, Norton, Multiedit, ...)

Everyone has noticed the problem after making same MOD's to the Unit
that the old .TPL files can not be uploaded to the Unit any more.
There is a simple protection scheme (2 bytes) that prevents uploading
a .TPL file from a different hardware configuration to the Unit.

This is a description how to bypass this protection. By uploading a
.TPL file with different hardware configuration, (from a other Unit
or just to change the 2 bytes) the Unit will be assigned to this new
configuration.

First a description of Terms and Positions:

1. Current_Byte
.....
This is the Byte that tells the current Status (Hardware configuration) of
the Rig, you can get this Byte as follows:
- Make a .TPL file from the Rig.(Menu: <Radio> <Create template>)
- Edit the .TPL File with e HEX Editor.
v this is the first byte*
- On the File Address 05E2 is the sequence 07 XX
^ Current_Byte (Addr.:05E3)
- The Current_byte can be in the Range from 00 to 06.
- *the first byte is usually 07, by experimenting with nonstandard Numbers
you can change this byte also. (03 or same other value, but very rare)

2. Key_Byte (Security Key)
.....
The Key_Byte is at the same place as the Current_Byte, but in the .TPL
file you intend to upload.
If you want to upload a .TPL File to the Rig, the Key_Byte must match the
Current_Byte (that means that the Hardware configuration of the Unit and
the .TPL file you intend to upload must be the same). Just change with the
HEX Editor the Key_Byte of the .TPL file you intend to upload to be the
Current_Byte and you can upload anything (any .TPL file) to the Rig.
!!! No more CERR Messages !!!
(As mentioned in 1. if you change the first byte, you have to change this)
(byte also (in the .TPL File you intend to upload) to be the same Byte as)
(in the Template you have just made to read the Current_Byte.)

3. Band-Set_Byte
.....
- Edit the .TPL file you intend to upload with e HEX Editor
v* v Sub_Band-Set_Byte (Addr.:0CE8)
- On Address 0CE6 is the Sequence 07 XX XX
^ Band-Set_Byte (Addr.:0CE7)
This Byte tells the Rig to switch to Band XX (XX is a Nr.between 00 and 06)
To change the Band simply change the Band-Set_Byte to the desired Number.
After Uploading the Modified .TPL File to the Rig, it switches to the
desired Band and the Current_Byte becomes the Band-Set_Byte. That means if
you want to upload later something else to the Rig, you have to change in
the .TPL File you intend to upload the Key_Byte to the new Current_Byte
(with the HEX Editor).
The Sub_Band-Set_Byte tells the Rig in with Sub Band to switch (see Table)
*The byte (0CE6) is usually 07, rare 03 or same other number.

Example
.....
Now, to do a band change do as follows:

- let's assume you have BAND_A1 (USA) and want to switch to BAND_F3
- make a .TPL file from your unit (let's assume original.tpl)
- copy the original.tpl to mod1.tpl (this file we are going to upload)
- read the Current_Byte from original.tpl (as described in 1)
(for the BAND_A1 we assumed you have it will be 01))
- set the Key_Byte in mod1.tpl to be the Current_Byte (01) (as described
in 2). It is logical that the Key_Byte will already be 01, you've just
made the copy, but it is a matter of principle, keep reading.
- set the Band-Set_Byte in the mod1.tpl to 00 (for the BAND_F)
- set the Sub_Band-Set_Byte in the mod1.tpl to 03 (for the Sub BAND F3)
- upload the mod1.tpl to the unit.
- power off, power on, now you have BAND_F3, DONE.

- let's assume you want to switch now to BAND_B2a
- make a .TPL file from you unit (let's assume temp.tpl)
- read the Current_Byte from temp.tpl, it will be 00. (BAND_F)
- copy the original.tpl to mod2.tpl
- set the Key_Byte in the mod2.tpl to be the Current_Byte (00)
- set the Band-Set_Byte in the mod2.tpl to 02 (BAND_B)
- set the Sub_Band-Set_Byte in the mod2.tpl to 01 (Sub BAND B2a)
- upload the mod2.tpl to the unit.?
- power off, power on, now you have BAND_B2a, DONE.

and so on ...

Here are the MOD's (Band's) available:

I 00 01 02 03 I <- Sub_Band-Set_Byte (Address 0CE8)
---
00 I F1 F2a F2b F3 I
01 I A1 A2a A2b A3 I
02 I B1 B2a B2b B3 I
03 I C1 C2a C2b C3 I
04 I D1 D2a D2b D3 I
05 I H1 H2a H2b H3 I
06 I FrEE FrEE FrEE FrEE I
---
^ Band-Set_Byte (Address 0CE7)

When you set the Rig in a band (with the Band-Set_Byte) then you can switch
from Sub Band X1 to X3 (if solder jumper 1 removed) with the key sequence:
- Hold Lamp and Knob by powering_on to switch to X3 Subband
- Hold Lamp and Knob by powering_on (you will see ALRST prS5) and then
press the function key to switch to X1 Subband

The TX for the X3 Bands is:

BAND SUB_Band TX
F 3 120-222 320-500
A 3 140-174 420-470
B 3 140-174 420-470

C 3 140-174 420-470
D 3 144-146 432-438
H 3 144-148 430-450
FrEE 50-300 300-540*

*It will TX from aprox. 118-233 and 312-508
RX from aprox.71-540 and 600-999 depending from the Unit.

The Sub Bands 1,2a and 2b are with restriction variations in TX and RX and
I am to tiered to examine them closely and write them down. I guess that
they are not very interesting.

ARS lost - effect

The FT50R has e BAND_PLAN like database and depending for witch country
your unit is configured (A,B,C,D & H) it is using the repeater database?
from his Memory for that country.

It is understandable that for the BAND_FrEE and BAND_F (TX:120-221&320-499)
there is no data in the database because those band's are not for any
specific country. That is why the ARS does not work any more, and not?
same mess up (magic) in the memory of the unit.

That does not mean that it is not possible to enter additional data to
the ARS memory database (I am working on it).

If you want to use the ARS again you just have to switch it into any
ordinary country BAND_X and it will work again.

Original .TPL file

If you don't have a original .TPL file, you can make (improvise) one:
1. Start the ADMS 1C software
2. Goto the File Menu and save a .RDF file as original.rdf
(don't download anything from the Unit, don't use a template)
3. Change with a HEX editor the first 3 bytes from RDF to TPL
4. Set the Key_Byte in this file to be the Current_Byte of your Unit
5. Rename the original.rdf to original.tpl
6. Start the ADMS 1C and upload the original.tpl to the Unit.

This will switch your unit to BAND A1 (USA), ARS will work again !

Disclaimer:

Don't TX and RX at frequencies that you are not allowed to!
I do not guarantee the validity of this information,
as Yaesu may change programming or hardware so that some of the
techniques in this document may cease to function. I am not
responsible if these instructions damage your rig in some way. All
I can say is that I have performed the following procedures to my
unit, and I am quite pleased with the results. Your mileage may
vary, etc.

Date: 5 Dec 97 17:07:58 GMT
From: sca00135@mail.wvnet.EDU (Sam Hall)
Subject: Kachina comments

It seems like there is quite a bit of interest in the Kachina 505 with requests for information. I have operated the 505 for a couple months and offer the following as my initial impressions. I have been somewhat hesitant reporting on the 505 as I don't want to mislead anyone about the rig. Please accept the following for what it is and nothing more. Remember, one man's trash is another man's treasure, what I like or dislike may be totally different from another perspective. I bought the 505 primarily to remote control at a site 7 miles from my home. I am told the telephone modem will be available after the first of 1998 and can't wait to operate the 505 remotely.

First, the caveats, I am not an engineer, I have not used any sophisticated test equipment (only my eyes and ears) , my total operation time amounts to about 10 hours involving DX, casual contesting and rag chew. I operate about 90% CW and 10% SSB. When possible I tried to compare the 505 with a 1000MP sitting side by side in an A/B configuration.

Generally, the 505 is not Dick Tracy's wrist TV, what it is a very good HF Transceiver. The look, feel and operation is "different", not necessarily better or worse than top of the line YaWoodCom's, but subjectively different.

I can not hear any difference in the receiver sensitivity between the 505 and the 1000MP. The filters in the 505, ranging from 100 Hz to 3.5 KC are very effective and seem to be truly "brick wall" effective. The 505 filters are definitely better than the 1000MP. Off frequency interference heard on the 1000MP is totally eliminated with the 505. Also, the narrow settings (100 and 200 Hz) seem to produce less "ringing" in the 505.

The variable AGC speed capability in the 505 is great. I had no idea what a difference AGC speed made on received signals and receive fatigue. I find myself often adjusting the AGC for given band conditions. Very good feature in the 505.

The DSP is a mixed bag. Describing the DSP operation is quite difficult. First, it is very effective in reducing noise levels. However, when engaged it makes the receive audio somewhat "strange" and difficult to understand weak SSB signals. The more I listen to it the better I can understand the SSB audio. Stronger SSB signals are much easier to listen to and understand. The DSP is wonderful for CW. There seems to be very little, if any, effect on the sound of a CW signal while considerably reducing the noise levels. There is a variable "Noise Reduction Level", but I can't tell much difference in the minimum and maximum settings. There does seem to be a correlation between the "Noise Reduction Level" and the AGC speed. I need to play with this combination a little more before I can form any opinion. Overall, I find the DSP very useful for SSB and outstanding for CW.

On the subject of noise, the 505 does not have a "Noise Blanker" as most other HF rigs have these days. Living in a high power line noise field, a "Noise Blanker" is critical for my operation. The lack of this feature in the 505 is definitely a minus for the rig. Also, I don't believe the notch filter in the 505 is as effective as the 1000MP. The 1000MP notch filter is not the best out there for my taste so the 505 is definitely lacking in that department. The DSP does lessen he power line noise, with the side effects stated.

One entirely subjective comparison between the 505 and the 1000MP is the overall receive audio. The general noise audio in the 505 sounds higher pitched and raspy to me, while the same noise level in the 1000MP sounds more "mellow" . For me, this results in the 1000MP being a little easier to listen to, especially in high noise and weak signal conditions. The "edge" is taken off the 505 by moving the IF shift -200Hz.. Probably shouldn't even comment on this point because it is entirely subjective and

perhaps without merit.

The transmitter seems to be as advertised. I find my best audio reports are with the "Tx Eq" at the maximum bass setting with a Heil microphone. I haven't used the rig for SSB enough to comment, other than to say I have not had any negative audio reports.

The CW "Dynamics" adjustment is a very nice feature. I understand that the adjustment actually varies the CW waveform from soft to hard. CW ops will appreciate this feature. Also, the sidetone is activated by pressing the spacebar with the sidetone volume easily adjusted by keystroke or mouse. Much easier to spot the receiver on frequency than the 1000MP. The numerous other TX features of the 505 are all as advertised and don't need my impressions. The built in tuner is very fast and seems to work fine. The Smith Chart antenna impedance data seems to work fine and is a feature I really like. Another feature I particularly enjoy is the "Band Sweep" display. Performs as advertised and is useful for quickly looking at band activity especially for 10 and 15 meters.

The control software is very, very good. I have used various CAT programs to control the 1000MP and other HF rigs with some programs being better than others. It is obvious the 505 software developers have spend a lot of time making the software intuitive and easy to use. I generally prefer keyboard control rather than mouse control. The keystrokes required to control the rig are minimal and quickly learned. Mouse control is point and click (and sometimes slide). The primary operating controls are accessible directly form the operating screen. Some lesser used controls are accessed only from drop down menus therefore requiring an extra keystroke or mouse click. I prefer every control being accessible directly from the operating screen and hope future software revisions provide for this. One point that deserves mentioning is the operation of the 505 is different than what you are used to with conventional radios. It took me several hours of operation to get the "feel" for using a keyboard to control a HF transceiver. Didn't really like it much at first (having used dials, knobs and switches for 35 years) but have now grown used to it and find in many respects it is easier to operate than the 1000MP. However, there is a certain primal quality to having the rig with it's knobs in front of you on the operating bench. Also, remember that you will have to have a computer monitor running at all times and if your monitor is like mine, it is RFI dirty. I find this a real problem and am in the process of trying everything I can to clear up some of the interference. There is an extension cable available for the 505 which would allow separation of the radio from the computer which may be one possible fix for monitor noise but I prefer to have the computer and rig together. If anyone has any advice as to a brand of monitor that is RFI free, I would really appreciate the information.

This has gone much longer than I had planned. Hope I have answered some questions. Overall, I find the 505 an excellent HF Transceiver with the exception of the notch filter, lack of noise blanker and pitch/tone (for lack of a better description) of general band noise. Many features of

the 505 I like better than the 1000MP. The major pluses are the Band Pass Filters, DSP for CW operation, adjustable AGC, CW adjustments, Band Sweep, Smith Chart impedance data, American made with customer support that is truly exceptional, but that is another story.

I would be happy to answer any questions anyone might have and if you want to stop by my QTH in southern West Virginia for a hands on demonstration just drop me an EMail. 73's, Sam--K8WVA--

Subject: FT920 MOD "NO WIRES TO CUT,NO SCREWS TO TAKE OUT"

I will send you the mod ONLY IF YOU PROMIS TO post to the Usergroup.
I am willing to also post the elusive IC-756 MOD. I finally found them on a
Hard Drive
that had problems. I can't posibly send them to every Ham so I ask that
they be published.

No, it is Class C biased and will not do SSB as it normally is wired..
IF you wired a bias ckt to the base of the xstr, it would do Class B or
AB and work on SSB...but if you dont know how to do it, get someone
who DOES....you CAN and WILL blow the xstr up if you dont set the bias
correctly!

Hello All;
I am selling 5ft Glen Martin Roof Tower w/ matching thrust bearing
and 9ft heavy duty aircraft aluminum 2" diameter mast. All in great
shape almost like new. Email: n2rif@amsat.org You can try calling

but my phone is usually busy cause Im on the net most of the time.
My ph# is 609-386-9382..
New it cost over $400 for everything. I am asking $290 OBO. It is
assembled. Shipping will probably be a bit hard to re-package. So
anyone who is within driving distance should probably re: My qth
is Burlington, NJ about 5 miles NorthEast of Phila,Pa and 12 miles
South of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Subject: FT-847 (again!)

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio
to be available in the USA in Mid February 1998. I don't think it has
aremote faceplate
or built in tuner. There is an optional "FC-20" tuner that will sit next
to the radio. No price
but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.
There are two optional Collins Mechanical filters in the second 45 KHZ
IF. One is
2.75 KHZ and the other one is 500 HZ. It appears this radio has the same
IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736
Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847
has some stuff specifically for satalite work (alpha Tagging)?
The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.
The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION and
has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746 has
a built in

AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this scope

operates faster but has less resolution. Also, the IC-746 has TWIN
PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF
and then "SLOPE DSP
Tuning " in the ausio section.

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio

to be available in the USA in Mid February 1998. I don't think
it has aremote faceplate

or built in tuner. There is an optional "FC-20" tuner that will sit
next to the radio. No price

but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.

There are two optional Collins Mechanical filters in the second 45
KHZ IF. One is

2.75 KHZ and the other one is 500 HZ. It appears this radio has the
same IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736

Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847

has some stuff specifically for satalite work (alpha Tagging)?

The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.

The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION
and

has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746
has a built in

AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this
scope

operates faster but has less resolution. Also, the IC-746 has TWIN PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF and then "SLOPE DSP

Tuning " in the ausio section.

Subject: HELP!! I need some advice on my first radio (HT) purchase!

KB4UTZ@yahoo.com wrote:

>I need some help from those of you with handy-talkie (HT) experience.

>I just passed my Tech Plus exam and am now in the process of choosing my
>first radio. I enjoy hiking, camping, and backpacking so I am currently
>leaning toward getting a dual 2m/70cm HT rig as opposed to a mobile rig. I
>do plan on listening/using the radio during my daily commute of about 25
>miles into metro Atlanta (Georgia) also though.

Kirby,

You will "sooner" than "later" acquire both a HT and a mobile because
both have their advantages and disadvantages. Nothing wrong with
picking up the HT first. Since you mentioned you like hiking (far
away from a repeater?) , I would steer or lean toward a radio that has
the potential of putting out 5+ watts. This narrows down the field.
At 5 watts, then I would see which radio has or can get the larger
battery so you have more air time. No fun having a radio with 2-4

hours of battery life between recharges and be on a hike and run out of juice. This again narrows the choices.. Plan on getting an optional antenna cause the rubber duck antenna will work fine in cities but the further away you get, the worse the performance till nothing.. Do you have adequate 70cm repeaters in your area to warrent the dual bander? If not, you can save a bundle of money that could go toward the mobile, by buying a single band radio.. Buy a single band radio(s) now and expand into the 70cm band later?

>My specific questions are:

>1. What radio would you recommend for a 2m/70cm beginner like me? Mobile
>or handheld? Why?

See my statement above. You will eventually get both. We were all beginners at one time. I would suggest joining a Ham club in your area and asking the members for their opinion and experiences and they would be glad to show you their radios up close and in person and tell you all the pros-cons of each...

>2. Depending upon the answer to #1, what radio(s) would you recommend and
>why?

Icom, Yaseu, Kenwood, Allinco all make good radios, both HT's and mobiles... Hummmm, not much help am I?? I have a mixture of all four brands if that tells you anything, and each one does something a little better than the others, but none are bad.

>3. As I stated before, I am leaning toward a handheld... in particular
>possibly either the Yaesu FT-50RD or the Kenwood TH-G71A since they both
>have the MIL-STD 810 rating. Would either of these two radios be a good
>choice? Would one be preferable over the other? Why? What are the pros
>and cons of each radio? Or... should I forget these two radios and
>consider something else altogether?

Good choices. I have not owned either, but have heard good things about both... Like I mentioned above, if you are hiking far away from repeaters, I would want a radio that puts out 5+ watts and have a relatively large battery capacity, with a telescoping antenna... Do these models have that ability??? Check the catelogs.

>4. Are there certain radio manufacturers that I should stick with (or
>conversely avoid) in consideration of radio quality, frequency of repairs
>needed, etc.?

Icom, Yaseu, Kenwood, Allinco all make good radios.

>Thank you in advance for any assistance you can provide.

Subject: FS Drake

I have a Drake dream station for sale. TR-7 with NB,Fan,CW and SSB filters,PS-7,SP-75 speech processor,MS-7 speaker,7077 Mic,R-7 receiver that will xcv with TR-7. R-7 has NB,CW,SSB,AM filters, all cables. I also have service kit with extender boards, tuning tools, and service manuals on all. Everything is like new and works great. I really don't need all this, but hate to break up. Will sell all for $1650 plus shipping. This is a rare and complete station. Also have a MN-7 tuner to match for another $150. 505-437-8658 or email.

From: Ron Castro
Subject: FT-50R ARS Probs Fix!

Like many who hardware-modified their Yeasu FT-50R's for MARS/CAP xmit, I noticed that my Automatic Repeater Shift (ARS) function had defaulted to the European band plan, rendering it useless for US repeater operations. I use the ADMS 1C programmer (v 1.04), but neglected to save a template of the origional USA configuration. Even if I had, I understand that making the hardware mod makes the file unusable.

Good news! Despite reports that the ARS function is "hosed" after the mod, it CAN be restored! To find out how, check out the FT-50R homepage at:
www.members.aol.com/aeimn/ft50/articles.txt
Look near the end for the Ingra-Beton article. The article shows how to use a hex-editor to change the .TPL file (although it works on .RDF files as well) to restore the functions, while retaining MARS/CAP xmit capability. I found that only ONE BYTE needed to be changed in my file to fix the problem, and although I have never edited a hex file before, it worked right away! Any hex editor can be used...I used XTREE Gold, but there are dozens of others out there, including the unfreindly DOS debug. Please read the disclaimers in the article.

One tip...read the article VERY carefully, make sure you FULLY understand it before proceeding, and if you are squemish about hex editing, talk to someone who knows about it to make sure you find the right addresses in your file the article refers to. Save a file that you know works with your radio as a back-up!

Three cheers for "Indi" for solving a problem that has stumped FT-50R users for a long time!

From: Yves Remedios
Subject: FT-8100 mod - RTM10B has it, why not share it???

In article , Kevin Swanson
writes
>I found it myself. I opened the top of the radio and looked for Zero Ohm
>resistors or Jumpers. I Found a Zero Ohm resistor in the front left corner
>looking down on the radio. Just above it and slightly to the left is an
>empty resestor position.
>
>Removing the resistor will OPEN - TX
>Adding a jumper to the top pads will CLOSE - RX to just the ham bands.
>I could not find any way to open the cellular block

Expanded TX

To change from C2>C3 or B2>B3
Remove R3028 and reset radio

To change from C1>C2 or B1>B2
Remove r3029 & R3031 and reset radio

To reset radio hold [VFO/MR] + [REV] then turn power on

Don't know about the cellular block - I'm not interested in listening to
cellular traffic!

> Gary Coffman KE4ZV | You make it |mail to ke4zv@bellsouth.net
> 534 Shannon Way | We break it |
> Lawrenceville, GA | Guaranteed |

>

Hi Gary,
I agree with all your comments. On our local repeater, I was one of the people who very much wanted CTCSS to be retrofitted to the unit, so became involved in making it happen.

We are required, on 2m. repeaters, by our licence to have 1750Hz access. However, we can have CTCSS also. We have OR'd the two access modes, as you have mentioned and this gives all users an opportunity to access. CTCSS is far better, as in our application, the decoder module has a much smaller bandwidth than that required for use with 1750Hz (+/-25Hz over here for 1750) and thus an improved signal to noise ratio for detecting the access tone.
When CTCSS is detected, the squelch on the repeater is effectively off and mobile signals will 'swish' up and down rather then chop out and in with mobile flutter. The same applies in reverse on the amateurs rx.

The repeater does not generate CTCSS when giving its identification in beacon mode. Therefore with a decoder on the amateurs rx, they do not have to listen to the beacon. They only hear the repeater when someone access' it.

I appreciate that you will understand this, but these are the enhancements I was meaning in my first reply, that the average user see's as No Value Add. They need to be convinced (not me Yves). In UK terms they ARE enhancements, but until people have seen/heard the benefits of CTCSS it is very hard to get them to understand the benefits.

Subject: What is the deal - Kachina 505DSP? Junk or what???

This is really kind of funny. I performed a search of all the archived news postings from this group on the Kachina 505, and of the 30 or so postings, 90%

of them where from folks begging for a review. I saw guys claim to have purchased 505's, offer side by side comparisons between the 505 and a FT1000MP

for instance, but they never produce crap. What gives? Is this rig such a piece of crap that no one want to discuss it, or better yet, compare it to anything? I've never seen a subject so avoided in my life. What gives Kachina owners? Don't want to discuss it? Waste of money? Greatest rig ever

made? Quiet, noisy, hard to use, easy to use, IF DSP suck, kicks butt, what? Blows the 1000MP away, can't touch the 870, makes the 756 look like a toy, can't even touch the audio dsp of the 920, what???????? Sorry to rant and rave, but I have 2k burning a hole in my back pocket, want to buy a new HF rig, but just can't decide, and certianly don't want to rule out a potential killer rig like the Kachina 505DSP! Thanks for listening, 73, Mike... WQ0N

Subject: 847 cost???

QST usually reviews a radio after it is in the market for 4-6 months. I
think the reason is to give the manufacturer a chance to correct
mistakes. MFj complained that the TNC 1278 go a bad review since it was
the first batch off the assembly line(trust me it wouldn't
have made a difference if it was 6 months later. Hee hee). If Both the
Icom IC-746 and
Yaesu FT-847 come out in February/March 1998 I would expect both to be
reviewed
by the Fall of 1998.

Subject: Alinco $88 handhelds

I called last Wednesday and ordered $88 UHF model by phone. It was delivered on Monday, not bad considering no UPS deliveries on Thursday and Friday. Also, the $88 included prepaid shipping. Where can you beat a deal like that?? It is a great little radio, works great keying our 443.450 repeater that is about 12-15 miles away (as long as I am outside the steel roofed office building). Come on guys, give it a break, its an $88 radio.

Subject: FS: Vibroplex Iambic Deluxe paddles, plus matching keyer control
panel

For sale: Vibroplex Iambic Deluxe paddles. All chrome parts and base with red
finger paddles. In mint condition; entirely as new.

Includes an accessory panel for controlling a keyer. This is a small box that
attaches on the side by means of existing screws on the bottom of the paddle;
no modifications. The box has 4 small pushbuttons for controlling various
functions of a keyer; you wire it up as needed. The box is very nicely chromed

and matches the paddle base exactly. The pushbuttons are red, matching the
finger paddles.

I also have a very nice plastic cover for the paddle that I'll include. It has

my callsign neatly engraved in it, so you'll never forget who you bought it
from :-)

$95 shipped UPS anywhere in the lower 48 states. Email if interested. Thanks.

Subject: yaesu mars/cap mod and repeater problems

Hello..

I did the mars/cap mod on my ft-50 and am unable to hit one of the
local repeaters. i can hit another just fine, but this one particular
repeater just doesn't seem to be there. i checked the offset and its
fine, 6 khz. does anyone know what might be causing the problem?

thanks

Subject: Yaesu VX-1R Flashing Display

I have a Yaesu VX-1R. When on the Act-1 Band (220-440) the frequency
display sometimes blinks. Anyone else having this trouble? Is it a VFO
lock problem or some obscure function? I cannot find a reference to
this condition in my manual!

Subject: FT920 MOD "NO WIRES TO CUT,NO SCREWS TO TAKE OUT"

YEASU FT920 TX OUT OF BAND

With the radio off, press[STEP] and [LOCK] (under VFO-A) and hold
these two keys in while you turn the raido on. Now release the two
keys.
Enter the following password: 0761161, then press [ENT].
Press [MENU],Rotate VFO B though the "U" settings till you get to the
"F" Menu (F-01 F-35).

TUNE to "F-35 your Display will say "DESTINA" PRESS ENTER
AND SELECT "OUTSIDE",Using VFO B.that is all there is to it!!!
THIS WILL LET YOU TX 1.8 TO 54MHZ,TO UNDO THE MOD SIMPLY SELECT F-35,
AND PUT IT BACK TO "USA"

The only other adjustments that are of any use is F-09 AM modultation.

After adjustments are made, Press [MENU] to save the new setting and,
exit to normal operation.

WARNING ANY OTHER ADJUSTMENT CAN AND WILL DEGRADE THE RADIO'S
PERFORMANCE.
I CANNOT BE RESPONSABLE FOR YOUR ACTIONS...

DO NOT SHIP YOUR EQUIPMENT BY MAIL BOXES ETC.

I went to the COMDEX computer show in Las Vegas. Like everyone I gathered up lots of literature and stuff to ship back home. IBM gave away free boxes so all I needed was to send it via UPS. I called a MBE store in Las Vegas and wanted to know if it cost more to ship my box from there, than sending if from the UPS office. They told me there would only be a slight service charge.

There slight service charge costs three times the regular UPS rate. MBE charged me 60.00 and UPS direct would of been $21.04. The UPS web site now has cost calculator for sending packages.

Be advised, don't do business with MBE unless you want to pay extra.

No, it is Class C biased and will not do SSB as it normally is wired.. IF you wired a bias ckt to the base of the xstr, it would do Class B or AB and work on SSB...but if you dont know how to do it, get someone who DOES....you CAN and WILL blow the xstr up if you dont set the bias correctly!

Subject: FT-847 (again!)

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect the radio
to be available in the USA in Mid February 1998. I don't think it has aremote faceplate
or built in tuner. There is an optional "FC-20" tuner that will sit next to the radio. No price
but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380 for comparison.
There are two optional Collins Mechanical filters in the second 45 KHZ IF. One is
2.75 KHZ and the other one is 500 HZ. It appears this radio has the same IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe that the FT-736
Satallite radio will be discontinued as soon as this radio hits the store shelves. The FT847
has some stuff specifically for satalite work (alpha Tagging)?
The price I believe will be $1700 to $1800 USA Tuner $400 plus the filters etc.
The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION and has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746 has a built in
AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this scope

operates faster but has less resolution. Also, the IC-746 has TWIN PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF and then "SLOPE DSP
Tuning " in the ausio section.

boundary="------------320E4050252EDDF9CEAA1D07"

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio

to be available in the USA in Mid February 1998. I don't think
it has aremote faceplate

or built in tuner. There is an optional "FC-20" tuner that will sit
next to the radio. No price

but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.

There are two optional Collins Mechanical filters in the second 45
KHZ IF. One is

2.75 KHZ and the other one is 500 HZ. It appears this radio has the
same IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736

Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847

has some stuff specifically for satalite work (alpha Tagging)?

The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.

The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION
and

has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746
has a built in

AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this
scope

operates faster but has less resolution. Also, the IC-746 has TWIN
PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF
and then "SLOPE DSP

Tuning " in the ausio section.

Subject: HELP!! I need some advice on my first radio (HT) purchase!

KB4UTZ@yahoo.com wrote:

>I need some help from those of you with handy-talkie (HT) experience.

>I just passed my Tech Plus exam and am now in the process of choosing my
>first radio. I enjoy hiking, camping, and backpacking so I am currently
>leaning toward getting a dual 2m/70cm HT rig as opposed to a mobile rig. I
>do plan on listening/using the radio during my daily commute of about 25
>miles into metro Atlanta (Georgia) also though.

Kirby,

You will "sooner" than "later" acquire both a HT and a mobile because
both have their advantages and disadvantages. Nothing wrong with
picking up the HT first. Since you mentioned you like hiking (far
away from a repeater?) , I would steer or lean toward a radio that has
the potential of putting out 5+ watts. This narrows down the field.
At 5 watts, then I would see which radio has or can get the larger
battery so you have more air time. No fun having a radio with 2-4
hours of battery life between recharges and be on a hike and run out
of juice. This again narrows the choices.. Plan on getting an
optional antenna cause the rubber duck antenna will work fine in
cities but the further away you get, the worse the performance till
nothing.. Do you have adequate 70cm repeaters in your area to
warrent the dual bander? If not, you can save a bundle of money that
could go toward the mobile, by buying a single band radio.. Buy a
single band radio(s) now and expand into the 70cm band later?

>My specific questions are:

>1. What radio would you recommend for a 2m/70cm beginner like me? Mobile
>or handheld? Why?

See my statement above. You will eventually get both. We were all
beginners at one time. I would suggest joining a Ham club in your
area and asking the members for their opinion and experiences and they
would be glad to show you their radios up close and in person and tell
you all the pros-cons of each...

>2. Depending upon the answer to #1, what radio(s) would you recommend and
>why?

Icom, Yaseu, Kenwood, Allinco all make good radios, both HT's and
mobiles... Hummmm, not much help am I?? I have a mixture of all four
brands if that tells you anything, and each one does something a
little better than the others, but none are bad.

>3. As I stated before, I am leaning toward a handheld... in particular
>possibly either the Yaesu FT-50RD or the Kenwood TH-G71A since they both
>have the MIL-STD 810 rating. Would either of these two radios be a good
>choice? Would one be preferable over the other? Why? What are the pros
>and cons of each radio? Or... should I forget these two radios and
>consider something else altogether?

Good choices. I have not owned either, but have heard good things
about both... Like I mentioned above, if you are hiking far away from
repeaters, I would want a radio that puts out 5+ watts and have a
relatively large battery capacity, with a telescoping antenna... Do
these models have that ability??? Check the catelogs.

>4. Are there certain radio manufacturers that I should stick with (or
>conversely avoid) in consideration of radio quality, frequency of repairs
>needed, etc.?

Icom, Yaseu, Kenwood, Allinco all make good radios.

>Thank you in advance for any assistance you can provide.

Hello Corey,
I sure would like to know the version number of the CPU in that radio
and the serial number......
The mod does not work in 3 radios I have tried here. Beyond that,
Destina is displayed on F-33 not F-35.

There are preamp projects in The Satellite Experimenter's Handbook, The Proceedings of the Central States VHF Society, and The VHF/UHF Dx Book, among other places. There are also suitable designs in *older* ARRL Handbooks. There was recently a MMIC preamp in QST, but that won't have a low enough noise figure to improve on an ordinary receiver at 70 cm. A few suitable preamps
have appeared in QEX. You really want a GASFET design. Far Circuits offers circuit boards for some of these preamp projects.

There are a number of companies which sell preamps. SSB Electronics and Advanced Receiver Research are well known, and make good ones. Expect to pay from $80 to nearly $200 for these, however. One of the few Hamtronics kits worth buying is their helically filtered 70 cm preamp. This is a good unit,
and fairly cheap too. Forget the Ramsey junk.

Subject: FS: DSI 5612 Freq. counter (Digimax)

For Sale:

DSI Instruments - 5612 Frequency Counter (DSI is now Digimax):

- 9-digit display (7-seg. LED)
- Stable OCXO (Oven controlled crystal oscillator)
- Sensitivity adjustment with panel mounted potentiometer (knob adjust)
- Prescaler enable/disable
- Dual input -
Input 1 - 50Mhz to 1.2Ghz (1Hz to 1kHz resolution)
Input 2 - 50Hz to 50Mhz (0.1Hz to 10Hz resolution)
- External wall transformer supply, carry handle, made in USA.
- Prescaler circuit is improved for excellent 1.2Ghz sensitivity.
- In excellent electrical and mechanical condition, tested to 1.3 Ghz at

about 30mV sensitivity.

$110.00, you pay shipping. (with manual)

Jack Parmentier

On 5 Dec 1997 04:27:41 GMT, kn6epsac@aol.com (KN6EPSac) wrote:

>Been curious about this for a long time. WHY is all aircraft Tx AM and not
FM?

It is primarily just a historical artifact. Back when they started putting
radios in airplanes, AM was the dominant voice mode, so the radios
were AM. Inertia, and a very large installed base, has kept it that way.
AM is generally "good enough" for air to ground communications, and
it does fit in a somewhat smaller amount of spectrum than FM.

There are a couple of other incidental benefits as well. The constant
AM carrier makes DFing fairly easy. And there is no FM capture
effect, so doubling is detectable, and often one can copy both signals
rather than just the stronger one. This has a safety benefit. AC could
switch to SSB, and they have for long HF circuits, but that loses the
ability to DF the signals easily because of the lack of a constant
carrier.

Replacing 570S Battery

Go to your local battery supplier and get a CR2032 Lithium Battery. RS
and most drug stores carry them.

Do the following in exact order.
1. Remove the top and bottom covers.
2. Remove the two brass-colored screws at each side of the top side
brackets holding the front panel to the main chassis. Loosen the two
brass-colored screws at the side bottom brackets (with a slot on each
side) holding the front panel.
3. Hook up the power supply to the radio and turn on the power supply.
4. Turn on the radio and then turn it off (leave the power supply on)
5. Slide the front panel forward and tilt it down and the battery can be
seen in it's holder---most likely a black plastic holder. Replace the
battery.
6. Turn on the radio and turn it off.
7. Replace screws and covers and you're back in business.

Subject: lightning strike detection

Does anyone know of a system for detecting lightning strikes within a
pre-defined area which displays the results as a 3D image on a computer?
There used to be a company in Texas that supplied such a kit in the
early 1980's. It involved placing 4 RX masts around a town and combining
the info from all 4 to generate a 3D map.
Any suggestions?

David Shenton.

Some FACTORY.TPL will not be usefull to you, you will probably
not be able to upload it (who knows what mod you are in)

> p.s. Yes, I did turn the squelch off when trying to upload.
> No hardware mods have been done.
>
> Any help would be appreciated.
>

> Larry
> N1ZGI

Do as follows:

Find e HEX editor.

1. Start the FT50 Programmer and save this as BLANK.RDF
(Start and save (BLANK.RDF is a empty .RDF))
2. Make a Template from your FT50, name it MY.TPL
3. Read from the MY.TPL the bytes on adress 05E2 and 05E3
(let's call them value1 and value2)
4. Edit the BLANK.TPL and set the byte on adress 05E2 to be
value1 and the byte on adress 05E3 to be value2
Change the first 3 letters in BLANK.RDF from RDF to TPL
5. Rename BLANK.RDF to BLANK.TPL
6. Upload the BLANK.TPL to the FT50

Everything will be normal now.

Don't play with the "Pull the cable out method"

Read the following info:

--------------2428246C390A
Content-Type: text/plain; charset=us-ascii; name="Ft50mods.txt"
Content-Transfer-Encoding: 7bit
Content-Disposition: inline; filename="Ft50mods.txt"

FT50R - Software Modifications
Ingra-Beton@t-online.de, Date: 31.03.97
==
This is modification of the first version, with same fix up's, typing
error corrections and better explanations (one Example too).

The Problem:

I have purchased a FT50R a couple of days ago and tried to make the MOD's
as described by Bill Childers (KE6VVW).

The removal of the solder jumper Nr.1 worked just fine and the
MARS/CAP was there. But as I tried to make the Trick to pull the
adapter cable out of the radio, ..., that don't work.

RT Systems says:
> The firmware inside the radio has been changed so that pulling the plug
> will not toggle the radio into a European mode. This change was made in
> radios with the 3rd and 4th digits of the serial number greater the 05.
> --
> Rod, RT Systems Amateur Radio Supply, Huntsville AL.
> Sales 1-800-723-6922, Tech 1-205-880-3093

So I had to find something else, here it is.

This is a method to do any MOD to your FT50R. The procedure is very simple
and fast done:

1. You make a template from your FT50R
2. Change 3 Bytes in the template
3. Upload the template to your FT50R

So you can switch to any BAND, you don't have do hardware interventions
or similar staff like pull the adapter cable out, ...

If you want do return the FT50R to its original state, just upload the
old (unmodified) .TPL to the Unit.

Information and explanations:

All MOD's can be made by software only. To do the MOD's you need the
ADMS 1C Software (I am using the 1.05 Version) and a HEX editor to
manipulate the .TPL file (I am working with .TPL file's only)
I am using HIEW 5.24 (Hacker's View) but any HEX editor will do the
job (PCT, Norton, Multiedit, ...)

Everyone has noticed the problem after making same MOD's to the Unit
that the old .TPL files can not be uploaded to the Unit any more.
There is a simple protection scheme (2 bytes) that prevents uploading
a .TPL file from a different hardware configuration to the Unit.

This is a description how to bypass this protection. By uploading a
.TPL file with different hardware configuration, (from a other Unit
or just to change the 2 bytes) the Unit will be assigned to this new
configuration.

First a description of Terms and Positions:

1. Current_Byte
.....
This is the Byte that tells the current Status (Hardware configuration) of
the Rig, you can get this Byte as follows:
- Make a .TPL file from the Rig.(Menu: <Radio> <Create template>)
- Edit the .TPL File with e HEX Editor.
v this is the first byte*
- On the File Address 05E2 is the sequence 07 XX
^ Current_Byte (Addr.:05E3)
- The Current_byte can be in the Range from 00 to 06.
- *the first byte is usually 07, by experimenting with nonstandard Numbers
you can change this byte also. (03 or same other value, but very rare)

2. Key_Byte (Security Key)
.....
The Key_Byte is at the same place as the Current_Byte, but in the .TPL
file you intend to upload.
If you want to upload a .TPL File to the Rig, the Key_Byte must match the
Current_Byte (that means that the Hardware configuration of the Unit and
the .TPL file you intend to upload must be the same). Just change with the
HEX Editor the Key_Byte of the .TPL file you intend to upload to be the

Current_Byte and you can upload anything (any .TPL file) to the Rig.
!!! No more CERR Messages !!!
(As mentioned in 1. if you change the first byte, you have to change this)
(byte also (in the .TPL File you intend to upload) to be the same Byte as)
(in the Template you have just made to read the Current_Byte.)

3. Band-Set_Byte
.....
- Edit the .TPL file you intend to upload with e HEX Editor
v* v Sub_Band-Set_Byte (Addr.:0CE8)
- On Address 0CE6 is the Sequence 07 XX XX
^ Band-Set_Byte (Addr.:0CE7)
This Byte tells the Rig to switch to Band XX (XX is a Nr.between 00 and 06)
To change the Band simply change the Band-Set_Byte to the desired Number.
After Uploading the Modified .TPL File to the Rig, it switches to the
desired Band and the Current_Byte becomes the Band-Set_Byte. That means if
you want to upload later something else to the Rig, you have to change in
the .TPL File you intend to upload the Key_Byte to the new Current_Byte
(with the HEX Editor).
The Sub_Band-Set_Byte tells the Rig in with Sub Band to switch (see Table)
*The byte (0CE6) is usually 07, rare 03 or same other number.

Example
.....
Now, to do a band change do as follows:
- let's assume you have BAND_A1 (USA) and want to switch to BAND_F3
- make a .TPL file from your unit (let's assume original.tpl)
- copy the original.tpl to mod1.tpl (this file we are going to upload)
- read the Current_Byte from original.tpl (as described in 1)
(for the BAND_A1 we assumed you have it will be 01))
- set the Key_Byte in mod1.tpl to be the Current_Byte (01) (as described
in 2). It is logical that the Key_Byte will already be 01, you've just
made the copy, but it is a matter of principle, keep reading.
- set the Band-Set_Byte in the mod1.tpl to 00 (for the BAND_F)
- set the Sub_Band-Set_Byte in the mod1.tpl to 03 (for the Sub BAND F3)
- upload the mod1.tpl to the unit.
- power off, power on, now you have BAND_F3, DONE.

- let's assume you want to switch now to BAND_B2a
- make a .TPL file from you unit (let's assume temp.tpl)
- read the Current_Byte from temp.tpl, it will be 00. (BAND_F)
- copy the original.tpl to mod2.tpl
- set the Key_Byte in the mod2.tpl to be the Current_Byte (00)
- set the Band-Set_Byte in the mod2.tpl to 02 (BAND_B)
- set the Sub_Band-Set_Byte in the mod2.tpl to 01 (Sub BAND B2a)
- upload the mod2.tpl to the unit.?
- power off, power on, now you have BAND_B2a, DONE.

and so on ...

Here are the MOD's (Band's) available:

```
I 00 01 02 03 I <- Sub_Band-Set_Byte (Address 0CE8)
--------------------------
00 I F1 F2a F2b F3 I
01 I A1 A2a A2b A3 I
02 I B1 B2a B2b B3 I
03 I C1 C2a C2b C3 I
04 I D1 D2a D2b D3 I
05 I H1 H2a H2b H3 I
06 I FrEE FrEE FrEE FrEE I
--------------------------
^ Band-Set_Byte (Address 0CE7)
```

When you set the Rig in a band (with the Band-Set_Byte) then you can switch from Sub Band X1 to X3 (if solder jumper 1 removed) with the key sequence:
- Hold Lamp and Knob by powering_on to switch to X3 Subband
- Hold Lamp and Knob by powering_on (you will see ALRST prS5) and then press the function key to switch to X1 Subband

The TX for the X3 Bands is:

```
BAND SUB_Band TX
F 3 120-222 320-500
A 3 140-174 420-470
B 3 140-174 420-470
C 3 140-174 420-470
D 3 144-146 432-438
H 3 144-148 430-450
FrEE 50-300 300-540*
```

*It will TX from aprox. 118-233 and 312-508
RX from aprox.71-540 and 600-999 depending from the Unit.

The Sub Bands 1,2a and 2b are with restriction variations in TX and RX and I am to tiered to examine them closely and write them down. I guess that they are not very interesting.

```
ARS lost - effect
-----------------
```
The FT50R has e BAND_PLAN like database and depending for witch country your unit is configured (A,B,C,D & H) it is using the repeater database? from his Memory for that country.

It is understandable that for the BAND_FrEE and BAND_F (TX:120-221&320-499) there is no data in the database because those band's are not for any specific country. That is why the ARS does not work any more, and not? same mess up (magic) in the memory of the unit.

That does not mean that it is not possible to enter additional data to the ARS memory database (I am working on it).

If you want to use the ARS again you just have to switch it into any ordinary country BAND_X and it will work again.

Original .TPL file

If you don't have a original .TPL file, you can make (improvise) one:
1. Start the ADMS 1C software
2. Goto the File Menu and save a .RDF file as original.rdf
(don't download anything from the Unit, don't use a template)
3. Change with a HEX editor the first 3 bytes from RDF to TPL
4. Set the Key_Byte in this file to be the Current_Byte of your Unit
5. Rename the original.rdf to original.tpl
6. Start the ADMS 1C and upload the original.tpl to the Unit.

This will switch your unit to BAND A1 (USA), ARS will work again !

Disclaimer:

Don't TX and RX at frequencies that you are not allowed to!
I do not guarantee the validity of this information,
as Yaesu may change programming or hardware so that some of the
techniques in this document may cease to function. I am not
responsible if these instructions damage your rig in some way. All
I can say is that I have performed the following procedures to my
unit, and I am quite pleased with the results. Your mileage may
vary, etc.

From: sca00135@mail.wvnet.EDU (Sam Hall)
Subject: Kachina comments

It seems like there is quite a bit of interest in the Kachina 505 with requests for information. I have operated the 505 for a couple months and offer the following as my initial impressions. I have been somewhat hesitant reporting on the 505 as I don't want to mislead anyone about the rig. Please accept the following for what it is and nothing more. Remember, one man's trash is another man's treasure, what I like or dislike may be totally different from another perspective. I bought the 505 primarily to remote control at a site 7 miles from my home. I am told the telephone modem will be available after the first of 1998 and can't wait to operate the 505 remotely.

First, the caveats, I am not an engineer, I have not used any sophisticated test equipment (only my eyes and ears) , my total operation time amounts to about 10 hours involving DX, casual contesting and rag chew. I operate about 90% CW and 10% SSB. When possible I tried to compare the 505 with a 1000MP sitting side by side in an A/B configuration.

Generally, the 505 is not Dick Tracy's wrist TV, what it is a very good HF Transceiver. The look, feel and operation is "different", not necessarily better or worse than top of the line YaWoodCom's, but subjectively different.

I can not hear any difference in the receiver sensitivity between the 505 and the 1000MP. The filters in the 505, ranging from 100 Hz to 3.5 KC are very effective and seem to be truly "brick wall" effective. The 505 filters are definitely better than the 1000MP. Off frequency interference heard on the 1000MP is totally eliminated with the 505. Also, the narrow settings (100 and 200 Hz) seem to produce less "ringing" in the 505.

The variable AGC speed capability in the 505 is great. I had no idea what a difference AGC speed made on received signals and receive fatigue. I find myself often adjusting the AGC for given band conditions. Very good feature in the 505.

The DSP is a mixed bag. Describing the DSP operation is quite difficult. First, it is very effective in reducing noise levels. However, when engaged it makes the receive audio somewhat "strange" and difficult to understand weak SSB signals. The more I listen to it the better I can understand the SSB audio. Stronger SSB signals are much easier to listen

to and understand. The DSP is wonderful for CW. There seems to be very little, if any, effect on the sound of a CW signal while considerably reducing the noise levels. There is a variable "Noise Reduction Level", but I can't tell much difference in the minimum and maximum settings. There does seem to be a correlation between the "Noise Reduction Level" and the AGC speed. I need to play with this combination a little more before I can form any opinion. Overall, I find the DSP very useful for SSB and outstanding for CW.

On the subject of noise, the 505 does not have a "Noise Blanker" as most other HF rigs have these days. Living in a high power line noise field, a "Noise Blanker" is critical for my operation. The lack of this feature in the 505 is definitely a minus for the rig. Also, I don't believe the notch filter in the 505 is as effective as the 1000MP. The 1000MP notch filter is not the best out there for my taste so the 505 is definitely lacking in that department. The DSP does lessen he power line noise, with the side effects stated.

One entirely subjective comparison between the 505 and the 1000MP is the overall receive audio. The general noise audio in the 505 sounds higher pitched and raspy to me, while the same noise level in the 1000MP sounds more "mellow" . For me, this results in the 1000MP being a little easier to listen to, especially in high noise and weak signal conditions. The "edge" is taken off the 505 by moving the IF shift -200Hz.. Probably shouldn't even comment on this point because it is entirely subjective and perhaps without merit.

The transmitter seems to be as advertised. I find my best audio reports are with the "Tx Eq" at the maximum bass setting with a Heil microphone. I haven't used the rig for SSB enough to comment, other than to say I have not had any negative audio reports.

The CW "Dynamics" adjustment is a very nice feature. I understand that the adjustment actually varies the CW waveform from soft to hard. CW ops will appreciate this feature. Also, the sidetone is activated by pressing the spacebar with the sidetone volume easily adjusted by keystroke or mouse. Much easier to spot the receiver on frequency than the 1000MP. The numerous other TX features of the 505 are all as advertised and don't need my impressions. The built in tuner is very fast and seems to work fine. The Smith Chart antenna impedance data seems to work fine and is a feature I really like. Another feature I particularly enjoy is the "Band Sweep" display. Performs as advertised and is useful for quickly looking at band activity especially for 10 and 15 meters.

The control software is very, very good. I have used various CAT programs to control the 1000MP and other HF rigs with some programs being better than others. It is obvious the 505 software developers have spend a lot of time making the software intuitive and easy to use. I generally prefer keyboard control rather than mouse control. The keystrokes required to control the rig are minimal and quickly learned. Mouse control is point and click (and sometimes slide). The primary operating controls are accessible directly form the operating screen. Some lesser used controls

are accessed only from drop down menus therefore requiring an extra keystroke or mouse click. I prefer every control being accessible directly from the operating screen and hope future software revisions provide for this. One point that deserves mentioning is the operation of the 505 is different than what you are used to with conventional radios. It took me several hours of operation to get the "feel" for using a keyboard to control a HF transceiver. Didn't really like it much at first (having used dials, knobs and switches for 35 years) but have now grown used to it and find in many respects it is easier to operate than the 1000MP. However, there is a certain primal quality to having the rig with it's knobs in front of you on the operating bench. Also, remember that you will have to have a computer monitor running at all times and if your monitor is like mine, it is RFI dirty. I find this a real problem and am in the process of trying everything I can to clear up some of the interference. There is an extension cable available for the 505 which would allow separation of the radio from the computer which may be one possible fix for monitor noise but I prefer to have the computer and rig together. If anyone has any advice as to a brand of monitor that is RFI free, I would really appreciate the information.

This has gone much longer than I had planned. Hope I have answered some questions. Overall, I find the 505 an excellent HF Transceiver with the exception of the notch filter, lack of noise blanker and pitch/tone (for lack of a better description) of general band noise. Many features of the 505 I like better than the 1000MP. The major pluses are the Band Pass Filters, DSP for CW operation, adjustable AGC, CW adjustments, Band Sweep, Smith Chart impedance data, American made with customer support that is truly exceptional, but that is another story.

I would be happy to answer any questions anyone might have and if you want to stop by my QTH in southern West Virginia for a hands on demonstration just drop me an EMail. 73's, Sam--K8WVA--

Date: 3 Dec 1997 04:44:59 GMT
From: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Subject: 17.9 MHz IF?

Just opened up the case of a Motorola HT, operating on 138.960 MHz.
The rcv crystal is marked 52286.66 (=52.28666 MHz). It's third multiple
lands at ~156.86 MHz. This implies the rcvr's IF is 17.9 MHz. Is this
a common IF for Mot VHF-high band gear?

Will this radio be easy to recrystal for 146 MHz?

(The transmit crystal is marked 46.320 MHz; the frequencies of these
crystals are not fundamental, correct?)

Thanks in advance!
Jeff KH2PZ

Gary, I guess you didn't comprehend the basic message in my unofficial
communique. I'll reiterate, don't give them any ideas or ammunition in
they're quest for the domination of the worlds communications.
Bill Gates likes to play monopoly not as a board game, but as a global
game.

> O'Hare Int'l Airport, IL.

Isn't just amazing how much range one can get out of a radio when it's
antenna is at 10 or 20 Thousand Feet, even with just a few watts.

Procomm, Procomm Plus, Telex, QModem, or ANY other Terminal program will get the job done. However... you may be required to tell the program just what COM port and IRQ the TNC is on. The same advice holds true for PaKet, TPK, WinPack, Sally, etc. The ONLY terminal program that I've seen that was really fussy was Kantronic's Kanterm that comes packaged with their TNC's. Wants to see COM 1 or COM 2 only.

I had the same problem. Was a bad plated through hole on the bias
board. Easy fix. The board is the oone next to the final cage. Pull
the tubes and check the bias voltage. You will find it on one side of
the board and not the other.

Later.

From: Phil Wheeler
Subject: QRP rig OHR100 vs. Norcal 40a

Daniel,

I've built the NC-40A and the Sierra, as well as an OHR-400.

A big plus of the OHR I built was that the torroids came pre-wound; the
NorCal radios required me to wind the torroids (over 40 for the Sierra).

The OHR-100 may be easier for you to build, tho the NC-40A will likely
draw less power and be lighter (nice for backpacking!).

OHR-100 may also give you better freq coverage; dunno personally, since I have not read the OHR-100 specs.

Both Wilderness Radio (NC-40A) and Oak Hills Radio (OHR) are very good to deal with.

Phil

From: Steven Ross <stevenross@italy-c.it.earthlink.net>
Subject: FS: 3-Aerotron mobile VHF radios (same freq's) - $175

3-Aerotron radios in VHF-Hi Range. There are 2-2 channel radios
and 1-one channel radio. They all talk to each other on 154.555. The
two freq. radios have a second channel of 154.600. They were working
fine when taken out of service this year. They have the plugs for power
and come with the microphones. $175 + COD shipping for all 3.

Subject: FS: Hallicrafters "Loudenboomer Mk II a Amp

This amp has been stored for a while but is in real nice (dusty) condition. Said to be in use when the Ham became silent key 6 years ago. Would restore to new and has spare 3-400 Z tube as well as the one in it. $450 .oo firm plus shippping from 79761. Looks sort of like a 30L-1 with power supply in separate case that is a bit larger. Have Dow Key relay box for use with older rigs. I wont say it is working now, but its obvious that it has and nothing is burned or looks bad. Would consider trades for newer amps or HF gear, Im just not a collector and already have an Alpha. Thanks, feel free to inquire about possible trades. Murray

Subject: FT-920 vs FT1000mp

I bought the FT-920 and really like it. Of course I don't do any contesting or anything else very serious. It was a nice upgrade for me from a TS-450.

For what I want to do, it is a very nice rig at the right price. I am able to hear and work a lot more dx with the 920, and 6M is a lot of fun when the band is open.

From: k1bqt@aol.com (K1BQT)
Subject: How much power do aircrafts TX?

Hi--

Depends upon the type of aircraft. Small private aircraft use small 12-volt transceivers that put out signals in the 10 watt range. Commercial class aircraft use more expensive radios that run on higher electrical system voltages and put out considerably more power. Control towers generally run low
power because the stations they are talking to are all in the local area and a thousand feet or more up in the air. If you want to hear distant towers clearly, you may need to install a directional antenna with a mast-mount preamp.

Hope that helps.

Finally, the broadcasting industry, their investors and all their supporters in government have figured out how to force every TV viewer to have a "pay" box attached to every existing TV in the country, if not the world. This marks THE END of free, advertiser paid off-air television as it has existed since the beginning of television broadcasting.

From the first, I never believed that the public would willingly pay the projected cost of HDTV willingly, given the reasonably good quality prevalent in current NTSC broadcasts in most places, and I still believe that. There is just so much you can improve on 'good', and I know I don't see any attractive advantage to HDTV, however 'clear' the picture.

It now becomes clear that the public will indeed have a choice-pay up or don't watch TV at all. No more Advertiser-commercial-paid TV for free.

Now all the push for HDTV over the past few years is explained. Mr. Hundt was apparently very successfull in his apparent Quest. What remains to be seen is how well the mandated change holds up.

On Tue, 02 Dec 1997 12:21:22 -0600, K0HB@JUNO.COM wrote:

>I keep waiting for some connection to amateur radio equipment or policy
>in this thread.

TV broadcast is the largest consumer of spectrum below 1 GHz. When that giant rolls over, all the lesser players have to pay attention. Of

particular interest to amateurs, the final bandplan releases the spectrum currently assigned to TV channels 2-6 and 63-69. That 72 MHz of freed spectrum may be able to relax some of the pressures placed on amateur VHF/UHF allocations by the little LEOs, and others, desiring new spectrum below 1 GHz.

In addition, the switch from analog NTSC to DTV has considerable implications with regard to TVI susceptability. That also is of interest to amateurs. And it isn't all good news because broadcasters will be sharply reducing power, so over the air TV will become more of a weak signal mode than it currently is.

Offsetting that somewhat is the more robust nature of the modulation and coding. But DTV will *not* use the sort of robust FEC which would make it immune to all types of interference (that would require more bandwidth for the coding overhead than is available in a 6 MHz channel). And the 8VSB modulation chosen is also not an ideal choice for operation in the face of certain types of interference. If DTV is successful in luring many viewers away from cable, amateurs are bound to face new TVI challenges.

We may also see the reverse situation, IE DTVs interfering with amateur equipment. A DTV receiver will be more computer than TV, and we already know the RFI computers can generate. The sweep rates (and magnitude of sweep currents) for the large 16:9 HDTV displays will also produce a new level and type of potential RFI to amateur operations.

So it is a good news, bad news situation for amateurs. We need to be aware of how we are likely to be affected by these sweeping changes in the TV broadcast market. And we also have to be aware of who our new neighbors will be in the newly vacated TV spectrum. There may be compatiblity issues involved with them too.

And finally, the mass market introduction of a new technology will have implications with regard to what will be cost effective for amateurs to adopt and adapt from it for our own uses. High speed RF modem technology will be sharply impacted by the mass market DTV receiver. A new generation of fast and cheap RF modems based on DTV technology could have a major impact on the sorts of operations amateurs may pursue at VHF/UHF.

Larry, you don't have a good grasp of broadcast economics.

Pay TV is a high risk low return retailing of programming. With
the exception of a few boutique events, it is low margin for the
content deliverer, and has the high overhead of retail sales.
The industry average annual ROI for Pay TV is 3%-6%, and only
about 30% of Pay TV events break even. (Of course there are
a few boutique events which do very well indeed. But there is
no daily market for that.)

Subscription TV has lower risk, higher volume, but still a fairly
low ROI. It is still retailing of programming, but more analogous
to K Mart or Walmart style retailing than is pay per view. Annual
ROI is on the order of 6%-10%, and "churn" still makes cost of
sales fairly burdensome.

But free advertiser supported TV is a horse of a different color.
The industry average annual ROI is 22%. The free broadcaster is
selling a different product than the pay TV delivery agents. He isn't
retailing programming to viewers. Programming is something he
buys as bait to lure in the product that he actually sells. That's the
audience.

The business of the free TV broadcaster is selling an audience
demographic to an advertiser. And advertisers are willing to pay
handsomely for that demographic. In prime time, advertisers pay
(collectively) an average of $32 per viewer per hour. And the
broadcaster incurs very little overhead cost of sales to get that
sort of revenue stream.

There are very few pay TV events which can command $32 an
hour from viewers, and no subscription TV services which can
command that sort of revenue. But it is the routine meat and
potatoes of the "free" broadcaster. He understands this business
very well, and knows where the large revenue streams live.
He isn't foolish enough to throw that away to get a lower ROI
at higher cost and risk by trying to retail programming to viewers.
He leaves that to the niche providers who fight over the fragmented

crumbs outside the mass audience.

I've been doing this for over 30 years, and I know how it works, and
where the money is. It isn't in retailing programming to viewers.
You can be very sure that the programming with the largest popular
appeal will continue to be "free" programming broadcast to anyone
who will tune in. The broadcaster will make sure of that, because
that's where the money is.

No, it is not worldwide. (You didn't think the US and Europe would *really*
agree on a single standard did you? The Not Invented Here syndrome is
way too strong for that.) The US and Europe have settled on totally
incompatible transmission standards, and Japan has settled on one
that takes a bit from each of the others, but is incompatible with both.
It is likely that the rest of the world will adopt one of these three
standards,
but likely a different one of the three on a country by country basis.

>If this is worldwide, it will really help us. We generate most of the
>worlds programming. Lots of Marks, Francs, Pounds coming back here (or
>at least the West Coast). It will also be nice when I am in Germany,
>to use the same set and DSS system as I use here. Digital TV (DTV) to
>me is a blessing.

The world has agreed on a worldwide *production* standard. That's a
different thing from the transmisson standard in the digital era. So
worldwide program distribution will be much easier than in the past.
And as you surmise, this will largely be to the benefit of the current
large program production companies. (Though it does open a niche
for the small producer because he won't be burdened with distributing
different versions of the same programming. Only the major companies
can afford to do that now.)

But you won't be able to take your US transmission standard TV to
Europe and watch European transmission standard broadcasts.

The modulation formats are totally different. (Truth be known, the
European choice has a number of significant advantages over the
US choice. Shades of NTSC versus PAL all over again.)

Once everything is back to baseband bits, the video signals are
the same, so you *may* see more multi-standard sets produced
which will decode the different transmission standards back to a
common baseband. But that's likely to be an extra cost option.

Subject: Programming a Regency RH256B VHF 2-way?????

Hello filks,

I need some assistance with self-programming a Regency RH256B VHF 2-way.
I know that it can be done if one "activates" a jumper. But, there are
two questions: 1 - Where is the jumper? 2 - What are the programming
steps? (I believe that it is similar to programming a scanner, but I have
no idea how to put in the PL Tone frequency.)

I appreciate any, and all, information anyone can give me on this. PLEASE
reply via e-mail (at least cc me via e-mail) as I do not have access to a
news server that carries this group.

Thanks,
Richard

TV sound is 25 kHz deviation, which requires a receiver bandwidth of 55 kHz.
FM broadcast is 75 kHz deviation, which requires a receiver bandwidth of
165 kHz, and is spaced on 200 kHz channel centers to provide some guard
band protection. The FT50 wide-FM mode can handle TV sound, but is too
narrow for FM broadcast. That should make it satisfactory for Wx sat pix.

(whether you are concerned investor/hedger or speculator, this info can change your strategy on the way you do your investments)

The aftermath of regional Asian stock markets, is going to have a much deeply rooted affair with their economic background, as well as their future prospects, expectation of further defaults by banks and companies exposed to Forex & equity e
xposure is on the cards.

Some have connected these problems with major hedge fund aggressive selling of local Asian currencies. The Hong Kong dollar, been the only one not affected as yet, due to excessive monitoring of levels by the HKMA, speculation has now risen
that the next couple of weeks should show the HK dollar its proper level, to some dealers its seen as HK$ 10-15 to the greenbuck (US=1), once its current peg gives way.

Now where does the forces of Chain reaction leaves the other markets no matter whether Equity, Debt, Agricultural, Asian, European, North American, where-so-ever-what-so-ever, When badly affected Asian markets collapse, they send a chill thr
ough major Stock Exchanges around the globe, there has always been
a relatively of connections as for example a company in Europe or USA may be deriving their profits from Asia, selling or buying products & services with Asia. Billion dollar fund management advisers dump stocks on a regional basis, and look
out for warning signs on a global basis, this fact is evident by looking at the 87 crash or this year's 1997 repeat.

Portfolio's are re-positioned for long term prospects, or for the better of risk management, with this complete change of strategy, where does all this big money do to the unexposed Investor, it could either be an great opportunity or disast
er for the uninformed
investor.

There are ways and means whereby an investor can protect his exposure by trading Futures contracts with PHILLIP GNI FUTURES PTE LTD, AND FOR THIS WE HAVE A SPECIAL
REPORT : INTRODUCTION TO THE FINANCIAL MARKETS & TRADING OPPORTUNITIES IN COMMODITY, CURRENCY & FINANCIAL FUTURES. (Available on request)

Subject: Butternut 2mtr Tuning?

Hello,

I have a Butternut 2meter trombone base antenna, but I am having trouble
getting the SWR down. Does anyone have the tuning information for the
gamma match?

Any information would be appreciated.

Thanks!

This is a multi-part message in MIME format.

--------------54DA3C953D9A
Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

FOR SALE: Wilson Mark IV VHF Handheld Transceiver ($35 + shipping)

This is an older VHF (2 meter) ham radio (see attached picture below).
Would make an excellent portable backup, emergency or packet radio. The
radio is in working condition, however, I do not have the antenna,
charger or owner's manual. It features:

+ 6 channels (crystal controlled -- see frequencies below)
+ Tone squelch decode
+ DTMF keypad (touch tone dialer)
+ HI/LO power switch
+ External Mic/Speaker
+ 11v, 500ma NICAD battery (last replaced 9/14/91)

Crytals included: 146.520, 146.670, 147.285, 147.165, 146.625 and
147.060 MHz

$35 plus shipping

If you're interested, please send e-mail to gabrown@bellsouth.net

From: Eric Trowbridge <jbart@bigsky.net>
Subject: GO CODE !!! GO CODE !!!

I am so happy that code is a requirement for the best portions of the
Amateur radio spectrum that I wish that there would be more testing that
required code. GO CODE, GO CODE Onward and most of all upward learn it
or stay on the frequencies that are more appropriate for you so that you
can't propagate bad and poorly referenced information about code.
Fortunately anyone that has done the code and is on the H.F. frequencies
never complains about learning it, they may not use it but they don't
complain. Notice the people who complain about it have to do it on the
internet because the frequencies that they use won't get the job done
otherwise, as for their belly-aching and complaining mentality so what,
learn code or stay off H.F. simple isn't it. GO CODE !!! GO CODE !!!

Eric KC7YGH
Code knowledge and proud of it!!!

From: moler@battelle.org
Subject: Opinions of TS-680

I'm considering purchase of a Kenwood TS-680S. This is a general coverage HF transceiver and covers 160m-6m. It is the twin to the Kenwood TS-140S which doesn't cover 6m.

I have seen the review done in QST in Oct 1988, but I'd like anyone who has any experience with this rig to give me some additional feedback on it's performance and user satisfaction. Thanks in advance.

Most large electrical supply houses will carry them. The one I like is made
by Delta Arrestors of Big Spring Texas. Cheap and effective. But there are
others.

Subject: ssb filters

Hi little fellows.Sorry for bigga' shapes.
well, I'm living in an ex-soviet heavy-splattering area, that means that very often I have to deal with square QRM.
na' getting to the point: I need a piece of 1.8kc ssb filter on 8.83Mc IF stage for the TS440S.I don't mind for one even used or a pair used 1.8kc - 0.5kc used but still OK.Do I have a deal for $100 the pair?
we'll answer to each and every mail but don't exced this price. We'll consider shipping.That was. Over.

Please come on <nicky@profm.ro> nic YO3GNO

I would like to connect my home made antenna tuner to the IC706 and get
it working via the "tuner/call" button. Does anyone know the
specifications for the Accessory connector or the connector for AH-3?
How does the IC706 detect that a tuner is connected?
The manual is not very useful.

No, it is Class C biased and will not do SSB as it normally is wired..
IF you wired a bias ckt to the base of the xstr, it would do Class B or
AB and work on SSB...but if you dont know how to do it, get someone
who DOES....you CAN and WILL blow the xstr up if you dont set the bias
correctly!

Hello All;
I am selling 5ft Glen Martin Roof Tower w/ matching thrust bearing
and 9ft heavy duty aircraft aluminum 2" diameter mast. All in great
shape almost like new. Email: n2rif@amsat.org You can try calling

but my phone is usually busy cause Im on the net most of the time.
My ph# is 609-386-9382..
New it cost over $400 for everything. I am asking $290 OBO. It is
assembled. Shipping will probably be a bit hard to re-package. So
anyone who is within driving distance should probably re: My qth
is Burlington, NJ about 5 miles NorthEast of Phila,Pa and 12 miles
South of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Subject: FT-847 (again!)

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio
to be available in the USA in Mid February 1998. I don't think it has
aremote faceplate
or built in tuner. There is an optional "FC-20" tuner that will sit next
to the radio. No price
but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.
There are two optional Collins Mechanical filters in the second 45 KHZ
IF. One is
2.75 KHZ and the other one is 500 HZ. It appears this radio has the same
IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736
Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847
has some stuff specifically for satalite work (alpha Tagging)?
The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.
The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION and
has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746 has
a built in

AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this scope

operates faster but has less resolution. Also, the IC-746 has TWIN
PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF
and then "SLOPE DSP
Tuning " in the ausio section.

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio

to be available in the USA in Mid February 1998. I don't think
it has aremote faceplate

or built in tuner. There is an optional "FC-20" tuner that will sit
next to the radio. No price

but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.

There are two optional Collins Mechanical filters in the second 45
KHZ IF. One is

2.75 KHZ and the other one is 500 HZ. It appears this radio has the
same IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736

Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847

has some stuff specifically for satalite work (alpha Tagging)?

The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.

The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION
and

has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746
has a built in

AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this
scope

operates faster but has less resolution. Also, the IC-746 has TWIN PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF and then "SLOPE DSP

Tuning " in the ausio section.

Subject: HELP!! I need some advice on my first radio (HT) purchase!

KB4UTZ@yahoo.com wrote:

>I need some help from those of you with handy-talkie (HT) experience.

>I just passed my Tech Plus exam and am now in the process of choosing my
>first radio. I enjoy hiking, camping, and backpacking so I am currently
>leaning toward getting a dual 2m/70cm HT rig as opposed to a mobile rig. I
>do plan on listening/using the radio during my daily commute of about 25
>miles into metro Atlanta (Georgia) also though.

Kirby,

You will "sooner" than "later" acquire both a HT and a mobile because
both have their advantages and disadvantages. Nothing wrong with
picking up the HT first. Since you mentioned you like hiking (far
away from a repeater?) , I would steer or lean toward a radio that has
the potential of putting out 5+ watts. This narrows down the field.
At 5 watts, then I would see which radio has or can get the larger
battery so you have more air time. No fun having a radio with 2-4

hours of battery life between recharges and be on a hike and run out of juice. This again narrows the choices.. Plan on getting an optional antenna cause the rubber duck antenna will work fine in cities but the further away you get, the worse the performance till nothing.. Do you have adequate 70cm repeaters in your area to warrent the dual bander? If not, you can save a bundle of money that could go toward the mobile, by buying a single band radio.. Buy a single band radio(s) now and expand into the 70cm band later?

>My specific questions are:

>1. What radio would you recommend for a 2m/70cm beginner like me? Mobile
>or handheld? Why?

See my statement above. You will eventually get both. We were all beginners at one time. I would suggest joining a Ham club in your area and asking the members for their opinion and experiences and they would be glad to show you their radios up close and in person and tell you all the pros-cons of each...

>2. Depending upon the answer to #1, what radio(s) would you recommend and
>why?

Icom, Yaseu, Kenwood, Allinco all make good radios, both HT's and mobiles... Hummmm, not much help am I?? I have a mixture of all four brands if that tells you anything, and each one does something a little better than the others, but none are bad.

>3. As I stated before, I am leaning toward a handheld... in particular
>possibly either the Yaesu FT-50RD or the Kenwood TH-G71A since they both
>have the MIL-STD 810 rating. Would either of these two radios be a good
>choice? Would one be preferable over the other? Why? What are the pros
>and cons of each radio? Or... should I forget these two radios and
>consider something else altogether?

Good choices. I have not owned either, but have heard good things about both... Like I mentioned above, if you are hiking far away from repeaters, I would want a radio that puts out 5+ watts and have a relatively large battery capacity, with a telescoping antenna... Do these models have that ability??? Check the catelogs.

>4. Are there certain radio manufacturers that I should stick with (or
>conversely avoid) in consideration of radio quality, frequency of repairs
>needed, etc.?

Icom, Yaseu, Kenwood, Allinco all make good radios.

>Thank you in advance for any assistance you can provide.

Hello Corey,
I sure would like to know the version number of the CPU in that radio
and the serial number......
The mod does not work in 3 radios I have tried here. Beyond that,
Destina is displayed on F-33 not F-35.

There are preamp projects in The Satellite Experimenter's Handbook, The
Proceedings of the Central States VHF Society, and The VHF/UHF Dx Book,
among other places. There are also suitable designs in *older* ARRL Handbooks.
There was recently a MMIC preamp in QST, but that won't have a low enough
noise figure to improve on an ordinary receiver at 70 cm. A few suitable
preamps
have appeared in QEX. You really want a GASFET design. Far Circuits offers
circuit boards for some of these preamp projects.

There are a number of companies which sell preamps. SSB Electronics and
Advanced Receiver Research are well known, and make good ones. Expect
to pay from $80 to nearly $200 for these, however. One of the few Hamtronics
kits worth buying is their helically filtered 70 cm preamp. This is a good
unit,
and fairly cheap too. Forget the Ramsey junk.

Subject: FS: DSI 5612 Freq. counter (Digimax)

For Sale:

DSI Instruments - 5612 Frequency Counter (DSI is now Digimax):

- 9-digit display (7-seg. LED)
- Stable OCXO (Oven controlled crystal oscillator)
- Sensitivity adjustment with panel mounted potentiometer (knob adjust)
- Prescaler enable/disable
- Dual input -
Input 1 - 50Mhz to 1.2Ghz (1Hz to 1kHz resolution)
Input 2 - 50Hz to 50Mhz (0.1Hz to 10Hz resolution)
- External wall transformer supply, carry handle, made in USA.
- Prescaler circuit is improved for excellent 1.2Ghz sensitivity.
- In excellent electrical and mechanical condition, tested to 1.3 Ghz at

about 30mV sensitivity.

$110.00, you pay shipping. (with manual)

Jack Parmentier

On 5 Dec 1997 04:27:41 GMT, kn6epsac@aol.com (KN6EPSac) wrote:

>Been curious about this for a long time. WHY is all aircraft Tx AM and not
FM?

It is primarily just a historical artifact. Back when they started putting
radios in airplanes, AM was the dominant voice mode, so the radios
were AM. Inertia, and a very large installed base, has kept it that way.
AM is generally "good enough" for air to ground communications, and
it does fit in a somewhat smaller amount of spectrum than FM.

There are a couple of other incidental benefits as well. The constant
AM carrier makes DFing fairly easy. And there is no FM capture
effect, so doubling is detectable, and often one can copy both signals
rather than just the stronger one. This has a safety benefit. AC could
switch to SSB, and they have for long HF circuits, but that loses the
ability to DF the signals easily because of the lack of a constant
carrier.

Replacing 570S Battery

Go to your local battery supplier and get a CR2032 Lithium Battery. RS
and most drug stores carry them.

Do the following in exact order.
1. Remove the top and bottom covers.
2. Remove the two brass-colored screws at each side of the top side
brackets holding the front panel to the main chassis. Loosen the two
brass-colored screws at the side bottom brackets (with a slot on each
side) holding the front panel.
3. Hook up the power supply to the radio and turn on the power supply.
4. Turn on the radio and then turn it off (leave the power supply on)
5. Slide the front panel forward and tilt it down and the battery can be
seen in it's holder---most likely a black plastic holder. Replace the
battery.
6. Turn on the radio and turn it off.
7. Replace screws and covers and you're back in business.

From: David Shenton <tabone@g-net.net>
Subject: lightning strike detection

Does anyone know of a system for detecting lightning strikes within a
pre-defined area which displays the results as a 3D image on a computer?
There used to be a company in Texas that supplied such a kit in the
early 1980's. It involved placing 4 RX masts around a town and combining
the info from all 4 to generate a 3D map.
Any suggestions?

David Shenton.

Some FACTORY.TPL will not be usefull to you, you will probably
not be able to upload it (who knows what mod you are in)

> p.s. Yes, I did turn the squelch off when trying to upload.
> No hardware mods have been done.
>
> Any help would be appreciated.
>
> Larry
> N1ZGI

Do as follows:

Find e HEX editor.

1. Start the FT50 Programmer and save this as BLANK.RDF
(Start and save (BLANK.RDF is a empty .RDF))
2. Make a Template from your FT50, name it MY.TPL
3. Read from the MY.TPL the bytes on adress 05E2 and 05E3
(let's call them value1 and value2)
4. Edit the BLANK.TPL and set the byte on adress 05E2 to be
value1 and the byte on adress 05E3 to be value2
Change the first 3 letters in BLANK.RDF from RDF to TPL
5. Rename BLANK.RDF to BLANK.TPL
6. Upload the BLANK.TPL to the FT50

Everything will be normal now.

Don't play with the "Pull the cable out method"

Read the following info:

FT50R - Software Modifications
Ingra-Beton@t-online.de, Date: 31.03.97
==
This is modification of the first version, with same fix up's, typing
error corrections and better explanations (one Example too).

The Problem:

I have purchased a FT50R a couple of days ago and tried to make the MOD's
as described by Bill Childers (KE6VVW).

The removal of the solder jumper Nr.1 worked just fine and the
MARS/CAP was there. But as I tried to make the Trick to pull the
adapter cable out of the radio, ..., that don't work.

RT Systems says:
> The firmware inside the radio has been changed so that pulling the plug
> will not toggle the radio into a European mode. This change was made in
> radios with the 3rd and 4th digits of the serial number greater the 05.

So I had to find something else, here it is.

This is a method to do any MOD to your FT50R. The procedure is very simple
and fast done:

1. You make a template from your FT50R
2. Change 3 Bytes in the template
3. Upload the template to your FT50R

So you can switch to any BAND, you don't have do hardware interventions
or similar staff like pull the adapter cable out, ...

If you want do return the FT50R to its original state, just upload the
old (unmodified) .TPL to the Unit.

Information and explanations:

All MOD's can be made by software only. To do the MOD's you need the
ADMS 1C Software (I am using the 1.05 Version) and a HEX editor to
manipulate the .TPL file (I am working with .TPL file's only)
I am using HIEW 5.24 (Hacker's View) but any HEX editor will do the
job (PCT, Norton, Multiedit, ...)

Everyone has noticed the problem after making same MOD's to the Unit
that the old .TPL files can not be uploaded to the Unit any more.
There is a simple protection scheme (2 bytes) that prevents uploading
a .TPL file from a different hardware configuration to the Unit.

This is a description how to bypass this protection. By uploading a
.TPL file with different hardware configuration, (from a other Unit
or just to change the 2 bytes) the Unit will be assigned to this new
configuration.

First a description of Terms and Positions:

1. Current_Byte
.....
This is the Byte that tells the current Status (Hardware configuration) of
the Rig, you can get this Byte as follows:
- Make a .TPL file from the Rig.(Menu: <Radio> <Create template>)
- Edit the .TPL File with e HEX Editor.
v this is the first byte*
- On the File Address 05E2 is the sequence 07 XX
^ Current_Byte (Addr.:05E3)
- The Current_byte can be in the Range from 00 to 06.
- *the first byte is usually 07, by experimenting with nonstandard Numbers
you can change this byte also. (03 or same other value, but very rare)

2. Key_Byte (Security Key)
.....
The Key_Byte is at the same place as the Current_Byte, but in the .TPL
file you intend to upload.
If you want to upload a .TPL File to the Rig, the Key_Byte must match the
Current_Byte (that means that the Hardware configuration of the Unit and
the .TPL file you intend to upload must be the same). Just change with the
HEX Editor the Key_Byte of the .TPL file you intend to upload to be the
Current_Byte and you can upload anything (any .TPL file) to the Rig.
!!! No more CERR Messages !!!
(As mentioned in 1. if you change the first byte, you have to change this)
(byte also (in the .TPL File you intend to upload) to be the same Byte as)
(in the Template you have just made to read the Current_Byte.)

3. Band-Set_Byte
.....
- Edit the .TPL file you intend to upload with e HEX Editor
v* v Sub_Band-Set_Byte (Addr.:0CE8)
- On Address 0CE6 is the Sequence 07 XX XX
^ Band-Set_Byte (Addr.:0CE7)
This Byte tells the Rig to switch to Band XX (XX is a Nr.between 00 and 06)
To change the Band simply change the Band-Set_Byte to the desired Number.
After Uploading the Modified .TPL File to the Rig, it switches to the
desired Band and the Current_Byte becomes the Band-Set_Byte. That means if
you want to upload later something else to the Rig, you have to change in
the .TPL File you intend to upload the Key_Byte to the new Current_Byte
(with the HEX Editor).
The Sub_Band-Set_Byte tells the Rig in with Sub Band to switch (see Table)
*The byte (0CE6) is usually 07, rare 03 or same other number.

Example
.....
Now, to do a band change do as follows:

- let's assume you have BAND_A1 (USA) and want to switch to BAND_F3
- make a .TPL file from your unit (let's assume original.tpl)
- copy the original.tpl to mod1.tpl (this file we are going to upload)
- read the Current_Byte from original.tpl (as described in 1)
(for the BAND_A1 we assumed you have it will be 01))
- set the Key_Byte in mod1.tpl to be the Current_Byte (01) (as described
in 2). It is logical that the Key_Byte will already be 01, you've just
made the copy, but it is a matter of principle, keep reading.
- set the Band-Set_Byte in the mod1.tpl to 00 (for the BAND_F)
- set the Sub_Band-Set_Byte in the mod1.tpl to 03 (for the Sub BAND F3)
- upload the mod1.tpl to the unit.
- power off, power on, now you have BAND_F3, DONE.

- let's assume you want to switch now to BAND_B2a
- make a .TPL file from you unit (let's assume temp.tpl)
- read the Current_Byte from temp.tpl, it will be 00. (BAND_F)
- copy the original.tpl to mod2.tpl
- set the Key_Byte in the mod2.tpl to be the Current_Byte (00)
- set the Band-Set_Byte in the mod2.tpl to 02 (BAND_B)
- set the Sub_Band-Set_Byte in the mod2.tpl to 01 (Sub BAND B2a)
- upload the mod2.tpl to the unit.?
- power off, power on, now you have BAND_B2a, DONE.

and so on ...

Here are the MOD's (Band's) available:

I 00 01 02 03 I <- Sub_Band-Set_Byte (Address 0CE8)
---
00 I F1 F2a F2b F3 I
01 I A1 A2a A2b A3 I
02 I B1 B2a B2b B3 I
03 I C1 C2a C2b C3 I
04 I D1 D2a D2b D3 I
05 I H1 H2a H2b H3 I
06 I FrEE FrEE FrEE FrEE I
---
^ Band-Set_Byte (Address 0CE7)

When you set the Rig in a band (with the Band-Set_Byte) then you can switch
from Sub Band X1 to X3 (if solder jumper 1 removed) with the key sequence:
- Hold Lamp and Knob by powering_on to switch to X3 Subband
- Hold Lamp and Knob by powering_on (you will see ALRST prS5) and then
press the function key to switch to X1 Subband

The TX for the X3 Bands is:

BAND SUB_Band TX
F 3 120-222 320-500
A 3 140-174 420-470
B 3 140-174 420-470

C 3 140-174 420-470
D 3 144-146 432-438
H 3 144-148 430-450
FrEE 50-300 300-540*

*It will TX from aprox. 118-233 and 312-508
RX from aprox.71-540 and 600-999 depending from the Unit.

The Sub Bands 1,2a and 2b are with restriction variations in TX and RX and
I am to tiered to examine them closely and write them down. I guess that
they are not very interesting.

ARS lost - effect

The FT50R has e BAND_PLAN like database and depending for witch country
your unit is configured (A,B,C,D & H) it is using the repeater database?
from his Memory for that country.

It is understandable that for the BAND_FrEE and BAND_F (TX:120-221&320-499)
there is no data in the database because those band's are not for any
specific country. That is why the ARS does not work any more, and not?
same mess up (magic) in the memory of the unit.

That does not mean that it is not possible to enter additional data to
the ARS memory database (I am working on it).

If you want to use the ARS again you just have to switch it into any
ordinary country BAND_X and it will work again.

Original .TPL file

If you don't have a original .TPL file, you can make (improvise) one:
1. Start the ADMS 1C software
2. Goto the File Menu and save a .RDF file as original.rdf
(don't download anything from the Unit, don't use a template)
3. Change with a HEX editor the first 3 bytes from RDF to TPL
4. Set the Key_Byte in this file to be the Current_Byte of your Unit
5. Rename the original.rdf to original.tpl
6. Start the ADMS 1C and upload the original.tpl to the Unit.

This will switch your unit to BAND A1 (USA), ARS will work again !

Disclaimer:

Don't TX and RX at frequencies that you are not allowed to!
I do not guarantee the validity of this information,
as Yaesu may change programming or hardware so that some of the
techniques in this document may cease to function. I am not
responsible if these instructions damage your rig in some way. All
I can say is that I have performed the following procedures to my
unit, and I am quite pleased with the results. Your mileage may
vary, etc.

From: sca00135@mail.wvnet.EDU (Sam Hall)
Subject: Kachina comments

It seems like there is quite a bit of interest in the Kachina 505 with requests for information. I have operated the 505 for a couple months and offer the following as my initial impressions. I have been somewhat hesitant reporting on the 505 as I don't want to mislead anyone about the rig. Please accept the following for what it is and nothing more. Remember, one man's trash is another man's treasure, what I like or dislike may be totally different from another perspective. I bought the 505 primarily to remote control at a site 7 miles from my home. I am told the telephone modem will be available after the first of 1998 and can't wait to operate the 505 remotely.

First, the caveats, I am not an engineer, I have not used any sophisticated test equipment (only my eyes and ears) , my total operation time amounts to about 10 hours involving DX, casual contesting and rag chew. I operate about 90% CW and 10% SSB. When possible I tried to compare the 505 with a 1000MP sitting side by side in an A/B configuration.

Generally, the 505 is not Dick Tracy's wrist TV, what it is a very good HF Transceiver. The look, feel and operation is "different", not necessarily better or worse than top of the line YaWoodCom's, but subjectively different.

I can not hear any difference in the receiver sensitivity between the 505 and the 1000MP. The filters in the 505, ranging from 100 Hz to 3.5 KC are very effective and seem to be truly "brick wall" effective. The 505 filters are definitely better than the 1000MP. Off frequency interference heard on the 1000MP is totally eliminated with the 505. Also, the narrow settings (100 and 200 Hz) seem to produce less "ringing" in the 505.

The variable AGC speed capability in the 505 is great. I had no idea what a difference AGC speed made on received signals and receive fatigue. I find myself often adjusting the AGC for given band conditions. Very good feature in the 505.

The DSP is a mixed bag. Describing the DSP operation is quite difficult. First, it is very effective in reducing noise levels. However, when engaged it makes the receive audio somewhat "strange" and difficult to understand weak SSB signals. The more I listen to it the better I can understand the SSB audio. Stronger SSB signals are much easier to listen to and understand. The DSP is wonderful for CW. There seems to be very little, if any, effect on the sound of a CW signal while considerably reducing the noise levels. There is a variable "Noise Reduction Level", but I can't tell much difference in the minimum and maximum settings. There does seem to be a correlation between the "Noise Reduction Level" and the AGC speed. I need to play with this combination a little more before I can form any opinion. Overall, I find the DSP very useful for SSB and outstanding for CW.

On the subject of noise, the 505 does not have a "Noise Blanker" as most other HF rigs have these days. Living in a high power line noise field, a "Noise Blanker" is critical for my operation. The lack of this feature in the 505 is definitely a minus for the rig. Also, I don't believe the notch filter in the 505 is as effective as the 1000MP. The 1000MP notch filter is not the best out there for my taste so the 505 is definitely lacking in that department. The DSP does lessen he power line noise, with the side effects stated.

One entirely subjective comparison between the 505 and the 1000MP is the overall receive audio. The general noise audio in the 505 sounds higher pitched and raspy to me, while the same noise level in the 1000MP sounds more "mellow" . For me, this results in the 1000MP being a little easier to listen to, especially in high noise and weak signal conditions. The "edge" is taken off the 505 by moving the IF shift -200Hz.. Probably shouldn't even comment on this point because it is entirely subjective and

perhaps without merit.

The transmitter seems to be as advertised. I find my best audio reports are with the "Tx Eq" at the maximum bass setting with a Heil microphone. I haven't used the rig for SSB enough to comment, other than to say I have not had any negative audio reports.

The CW "Dynamics" adjustment is a very nice feature. I understand that the adjustment actually varies the CW waveform from soft to hard. CW ops will appreciate this feature. Also, the sidetone is activated by pressing the spacebar with the sidetone volume easily adjusted by keystroke or mouse. Much easier to spot the receiver on frequency than the 1000MP. The numerous other TX features of the 505 are all as advertised and don't need my impressions. The built in tuner is very fast and seems to work fine. The Smith Chart antenna impedance data seems to work fine and is a feature I really like. Another feature I particularly enjoy is the "Band Sweep" display. Performs as advertised and is useful for quickly looking at band activity especially for 10 and 15 meters.

The control software is very, very good. I have used various CAT programs to control the 1000MP and other HF rigs with some programs being better than others. It is obvious the 505 software developers have spend a lot of time making the software intuitive and easy to use. I generally prefer keyboard control rather than mouse control. The keystrokes required to control the rig are minimal and quickly learned. Mouse control is point and click (and sometimes slide). The primary operating controls are accessible directly form the operating screen. Some lesser used controls are accessed only from drop down menus therefore requiring an extra keystroke or mouse click. I prefer every control being accessible directly from the operating screen and hope future software revisions provide for this. One point that deserves mentioning is the operation of the 505 is different than what you are used to with conventional radios. It took me several hours of operation to get the "feel" for using a keyboard to control a HF transceiver. Didn't really like it much at first (having used dials, knobs and switches for 35 years) but have now grown used to it and find in many respects it is easier to operate than the 1000MP. However, there is a certain primal quality to having the rig with it's knobs in front of you on the operating bench. Also, remember that you will have to have a computer monitor running at all times and if your monitor is like mine, it is RFI dirty. I find this a real problem and am in the process of trying everything I can to clear up some of the interference. There is an extension cable available for the 505 which would allow separation of the radio from the computer which may be one possible fix for monitor noise but I prefer to have the computer and rig together. If anyone has any advice as to a brand of monitor that is RFI free, I would really appreciate the information.

This has gone much longer than I had planned. Hope I have answered some questions. Overall, I find the 505 an excellent HF Transceiver with the exception of the notch filter, lack of noise blanker and pitch/tone (for lack of a better description) of general band noise. Many features of

the 505 I like better than the 1000MP. The major pluses are the Band Pass Filters, DSP for CW operation, adjustable AGC, CW adjustments, Band Sweep, Smith Chart impedance data, American made with customer support that is truly exceptional, but that is another story.

I would be happy to answer any questions anyone might have and if you want to stop by my QTH in southern West Virginia for a hands on demonstration just drop me an EMail. 73's, Sam--K8WVA--

Date: 3 Dec 1997 04:44:59 GMT
From: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Subject: 17.9 MHz IF?

Just opened up the case of a Motorola HT, operating on 138.960 MHz.
The rcv crystal is marked 52286.66 (=52.28666 MHz). It's third multiple
lands at ~156.86 MHz. This implies the rcvr's IF is 17.9 MHz. Is this
a common IF for Mot VHF-high band gear?

Will this radio be easy to recrystal for 146 MHz?

(The transmit crystal is marked 46.320 MHz; the frequencies of these
crystals are not fundamental, correct?)

Thanks in advance!
Jeff KH2PZ

Gary, I guess you didn't comprehend the basic message in my unofficial
communique. I'll reiterate, don't give them any ideas or ammunition in
they're quest for the domination of the worlds communications.
Bill Gates likes to play monopoly not as a board game, but as a global
game.

Isn't just amazing how much range one can get out of a radio when it's
antenna is at 10 or 20 Thousand Feet, even with just a few watts.

Procomm, Procomm Plus, Telex, QModem, or ANY other Terminal program will
get the job done. However... you may be required to tell the program
just what COM port and IRQ the TNC is on. The same advice holds true
for PaKet, TPK, WinPack, Sally, etc. The ONLY terminal program that I've
seen that was really fussy was Kantronic's Kanterm that comes packaged
with their TNC's. Wants to see COM 1 or COM 2 only.

I had the same problem. Was a bad plated through hole on the bias
board. Easy fix. The board is the oone next to the final cage. Pull
the tubes and check the bias voltage. You will find it on one side of
the board and not the other.

Later.

Subject: QRP rig OHR100 vs. Norcal 40a

Daniel,

I've built the NC-40A and the Sierra, as well as an OHR-400.

A big plus of the OHR I built was that the torroids came pre-wound; the NorCal radios required me to wind the torroids (over 40 for the Sierra).

The OHR-100 may be easier for you to build, tho the NC-40A will likely draw less power and be lighter (nice for backpacking!).

OHR-100 may also give you better freq coverage; dunno personally, since I have not read the OHR-100 specs.

Both Wilderness Radio (NC-40A) and Oak Hills Radio (OHR) are very good to deal with.

Phil

Date: 3 Dec 1997 04:44:59 GMT
From: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Subject: 17.9 MHz IF?

Just opened up the case of a Motorola HT, operating on 138.960 MHz.
The rcv crystal is marked 52286.66 (=52.28666 MHz). It's third multiple
lands at ~156.86 MHz. This implies the rcvr's IF is 17.9 MHz. Is this
a common IF for Mot VHF-high band gear?

Will this radio be easy to recrystal for 146 MHz?

(The transmit crystal is marked 46.320 MHz; the frequencies of these
crystals are not fundamental, correct?)

Thanks in advance!
Jeff KH2PZ

Gary, I guess you didn't comprehend the basic message in my unofficial
communique. I'll reiterate, don't give them any ideas or ammunition in
they're quest for the domination of the worlds communications.
Bill Gates likes to play monopoly not as a board game, but as a global
game.

Isn't just amazing how much range one can get out of a radio when it's
antenna is at 10 or 20 Thousand Feet, even with just a few watts.

I also heard that Yaesu made the 8100 harder to modify. Not sure
about this though. I have an 8100 and there don't seem to be any mods
other than the MARS/CAP available.

Procomm, Procomm Plus, Telex, QModem, or ANY other Terminal program will
get the job done. However... you may be required to tell the program
just what COM port and IRQ the TNC is on. The same advice holds true
for PaKet, TPK, WinPack, Sally, etc. The ONLY terminal program that I've
seen that was really fussy was Kantronic's Kanterm that comes packaged
with their TNC's. Wants to see COM 1 or COM 2 only.

I had the same problem. Was a bad plated through hole on the bias
board. Easy fix. The board is the oone next to the final cage. Pull
the tubes and check the bias voltage. You will find it on one side of
the board and not the other.

Later.

From: Phil Wheeler
Subject: QRP rig OHR100 vs. Norcal 40a

Daniel,

I've built the NC-40A and the Sierra, as well as an OHR-400.

A big plus of the OHR I built was that the torroids came pre-wound; the
NorCal radios required me to wind the torroids (over 40 for the Sierra).

The OHR-100 may be easier for you to build, tho the NC-40A will likely
draw less power and be lighter (nice for backpacking!).

OHR-100 may also give you better freq coverage; dunno personally, since
I have not read the OHR-100 specs.

Both Wilderness Radio (NC-40A) and Oak Hills Radio (OHR) are very good
to deal with.

Phil

I have a GAP Titan mounted at 8' (To allow walking under it without
getting "clotheslined" on the counterpoise). It *does* work and one
could easily earn DXCC with it in a few of months. HOWEVER, my dipoles
hung at 35 feet on 40, 20 & 15m work better. I just don't have room for
4 or 5 more dipoles. :-)

From: kc5mdm@iglobal.net
Subject: FS: Hallicrafters "Loudenboomer Mk II a Amp

This amp has been stored for a while but is in real nice (dusty) condition. Said to be in use when the Ham became silent key 6 years ago. Would restore to new and has spare 3-400 Z tube as well as the one in it. $450 .oo firm plus shippping from 79761. Looks sort of like a 30L-1 with power supply in separate case that is a bit larger. Have Dow Key relay box for use with older rigs. I wont say it is working now, but its obvious that it has and nothing is burned or looks bad. Would consider trades for newer amps or HF gear, Im just not a collector and already have an Alpha. Thanks, feel free to inquire about possible trades. Murray

Subject: FT-920 vs FT1000mp

I bought the FT-920 and really like it. Of course I don't do any contesting
or anything else very serious. It was a nice upgrade for me from a TS-450.
For what I want to do, it is a very nice rig at the right price. I am able
to hear and work a lot more dx with the 920, and 6M is a lot of fun when the
band is open.

From: k1bqt@aol.com (K1BQT)
Subject: How much power do aircrafts TX?

Hi--

Depends upon the type of aircraft. Small private aircraft use small 12-volt transceivers that put out signals in the 10 watt range. Commercial class aircraft use more expensive radios that run on higher electrical system voltages and put out considerably more power. Control towers generally run low
power because the stations they are talking to are all in the local area and a thousand feet or more up in the air. If you want to hear distant towers clearly, you may need to install a directional antenna with a mast-mount preamp.

Hope that helps.

Finally, the broadcasting industry, their investors and all their supporters in government have figured out how to force every TV viewer to have a "pay" box attached to every existing TV in the country, if not the world. This marks THE END of free, advertiser paid off-air television as it has existed since the beginning of television broadcasting.

From the first, I never believed that the public would willingly pay the projected cost of HDTV willingly, given the reasonably good quality prevalent in current NTSC broadcasts in most places, and I still believe that. There is just so much you can improve on 'good', and I know I don't see any attractive advantage to HDTV, however 'clear' the picture.

It now becomes clear that the public will indeed have a choice-pay up or don't watch TV at all. No more Advertiser-commercial-paid TV for free.

Now all the push for HDTV over the past few years is explained. Mr. Hundt was apparently very successfull in his apparent Quest. What remains to be seen is how well the mandated change holds up.

>I keep waiting for some connection to amateur radio equipment or policy
>in this thread.

TV broadcast is the largest consumer of spectrum below 1 GHz. When
that giant rolls over, all the lesser players have to pay attention. Of
particular interest to amateurs, the final bandplan releases the spectrum
currently assigned to TV channels 2-6 and 63-69. That 72 MHz of freed
spectrum may be able to relax some of the pressures placed on amateur
VHF/UHF allocations by the little LEOs, and others, desiring new spectrum
below 1 GHz.

In addition, the switch from analog NTSC to DTV has considerable
implications with regard to TVI susceptability. That also is of interest
to amateurs. And it isn't all good news because broadcasters will
be sharply reducing power, so over the air TV will become more of
a weak signal mode than it currently is.

Offsetting that somewhat is the more robust nature of the modulation
and coding. But DTV will *not* use the sort of robust FEC which would
make it immune to all types of interference (that would require more
bandwidth for the coding overhead than is available in a 6 MHz channel).
And the 8VSB modulation chosen is also not an ideal choice for operation
in the face of certain types of interference. If DTV is successful in luring
many viewers away from cable, amateurs are bound to face new TVI
challenges.

We may also see the reverse situation, IE DTVs interfering with amateur
equipment. A DTV receiver will be more computer than TV, and we already
know the RFI computers can generate. The sweep rates (and magnitude of
sweep currents) for the large 16:9 HDTV displays will also produce a new
level and type of potential RFI to amateur operations.

So it is a good news, bad news situation for amateurs. We need to be
aware of how we are likely to be affected by these sweeping changes
in the TV broadcast market. And we also have to be aware of who our
new neighbors will be in the newly vacated TV spectrum. There may
be compatiblity issues involved with them too.

And finally, the mass market introduction of a new technology will
have implications with regard to what will be cost effective for amateurs
to adopt and adapt from it for our own uses. High speed RF modem
technology will be sharply impacted by the mass market DTV receiver.
A new generation of fast and cheap RF modems based on DTV
technology could have a major impact on the sorts of operations
amateurs may pursue at VHF/UHF.

Larry, you don't have a good grasp of broadcast economics.

Pay TV is a high risk low return retailing of programming. With
the exception of a few boutique events, it is low margin for the
content deliverer, and has the high overhead of retail sales.
The industry average annual ROI for Pay TV is 3%-6%, and only
about 30% of Pay TV events break even. (Of course there are
a few boutique events which do very well indeed. But there is
no daily market for that.)

Subscription TV has lower risk, higher volume, but still a fairly
low ROI. It is still retailing of programming, but more analogous
to K Mart or Walmart style retailing than is pay per view. Annual
ROI is on the order of 6%-10%, and "churn" still makes cost of
sales fairly burdensome.

But free advertiser supported TV is a horse of a different color.
The industry average annual ROI is 22%. The free broadcaster is
selling a different product than the pay TV delivery agents. He isn't
retailing programming to viewers. Programming is something he
buys as bait to lure in the product that he actually sells. That's the
audience.

The business of the free TV broadcaster is selling an audience
demographic to an advertiser. And advertisers are willing to pay
handsomely for that demographic. In prime time, advertisers pay
(collectively) an average of $32 per viewer per hour. And the
broadcaster incurs very little overhead cost of sales to get that
sort of revenue stream.

There are very few pay TV events which can command $32 an
hour from viewers, and no subscription TV services which can
command that sort of revenue. But it is the routine meat and
potatoes of the "free" broadcaster. He understands this business

very well, and knows where the large revenue streams live.
He isn't foolish enough to throw that away to get a lower ROI
at higher cost and risk by trying to retail programming to viewers.
He leaves that to the niche providers who fight over the fragmented
crumbs outside the mass audience.

I've been doing this for over 30 years, and I know how it works, and
where the money is. It isn't in retailing programming to viewers.
You can be very sure that the programming with the largest popular
appeal will continue to be "free" programming broadcast to anyone
who will tune in. The broadcaster will make sure of that, because
that's where the money is.

No, it is not worldwide. (You didn't think the US and Europe would *really*
agree on a single standard did you? The Not Invented Here syndrome is
way too strong for that.) The US and Europe have settled on totally
incompatible transmission standards, and Japan has settled on one
that takes a bit from each of the others, but is incompatible with both.
It is likely that the rest of the world will adopt one of these three
standards,
but likely a different one of the three on a country by country basis.

>If this is worldwide, it will really help us. We generate most of the
>worlds programming. Lots of Marks, Francs, Pounds coming back here (or
>at least the West Coast). It will also be nice when I am in Germany,
>to use the same set and DSS system as I use here. Digital TV (DTV) to
>me is a blessing.

The world has agreed on a worldwide *production* standard. That's a
different thing from the transmisson standard in the digital era. So
worldwide program distribution will be much easier than in the past.
And as you surmise, this will largely be to the benefit of the current
large program production companies. (Though it does open a niche
for the small producer because he won't be burdened with distributing
different versions of the same programming. Only the major companies

can afford to do that now.)

But you won't be able to take your US transmission standard TV to
Europe and watch European transmission standard broadcasts.
The modulation formats are totally different. (Truth be known, the
European choice has a number of significant advantages over the
US choice. Shades of NTSC versus PAL all over again.)

Once everything is back to baseband bits, the video signals are
the same, so you *may* see more multi-standard sets produced
which will decode the different transmission standards back to a
common baseband. But that's likely to be an extra cost option.

Subject: Programming a Regency RH256B VHF 2-way?????

Hello filks,

I need some assistance with self-programming a Regency RH256B VHF 2-way.
I know that it can be done if one "activates" a jumper. But, there are
two questions: 1 - Where is the jumper? 2 - What are the programming
steps? (I believe that it is similar to programming a scanner, but I have
no idea how to put in the PL Tone frequency.)

I appreciate any, and all, information anyone can give me on this. PLEASE
reply via e-mail (at least cc me via e-mail) as I do not have access to a
news server that carries this group.

Thanks,
Richard

TV sound is 25 kHz deviation, which requires a receiver bandwidth of 55 kHz.
FM broadcast is 75 kHz deviation, which requires a receiver bandwidth of
165 kHz, and is spaced on 200 kHz channel centers to provide some guard
band protection. The FT50 wide-FM mode can handle TV sound, but is too
narrow for FM broadcast. That should make it satisfactory for Wx sat pix.

(whether you are concerned investor/hedger or speculator, this info can change your strategy on the way you do your investments)

The aftermath of regional Asian stock markets, is going to have a much deeply rooted affair with their economic background, as well as their future prospects, expectation of further defaults by banks and companies exposed to Forex & equity e
xposure is on the cards.

Some have connected these problems with major hedge fund aggressive selling of local Asian currencies. The Hong Kong dollar, been the only one not affected as yet, due to excessive monitoring of levels by the HKMA, speculation has now risen
that the next couple of weeks should show the HK dollar its proper level, to some dealers its seen as HK$ 10-15 to the greenbuck (US=1), once its current peg gives way.

Now where does the forces of Chain reaction leaves the other markets no matter whether Equity, Debt, Agricultural, Asian, European, North American, where-so-ever-what-so-ever, When badly affected Asian markets collapse, they send a chill thr
ough major Stock Exchanges around the globe, there has always been
a relatively of connections as for example a company in Europe or USA may be deriving their profits from Asia, selling or buying products & services with Asia. Billion dollar fund management advisers dump stocks on a regional basis, and look
out for warning signs on a global basis, this fact is evident by looking at the 87 crash or this year's 1997 repeat.

Portfolio's are re-positioned for long term prospects, or for the better of risk management, with this complete change of strategy, where does all this big money do to the unexposed Investor, it could either be an great opportunity or disast
er for the uninformed
investor.

There are ways and means whereby an investor can protect his exposure by trading Futures contracts with PHILLIP GNI FUTURES PTE LTD, AND FOR THIS WE HAVE A SPECIAL
REPORT : INTRODUCTION TO THE FINANCIAL MARKETS & TRADING OPPORTUNITIES IN COMMODITY, CURRENCY & FINANCIAL FUTURES. (Available on request)

A little bit of Information on Phillip GNI Futures, Is a founding clearing member of Singapore International Monetary Exchange (http://www.simex.com) and the futures arm of Phillip Securities PL, one of the major stock broking company in Sin
gapore

(http://www.phillipsecurities.com).

Established since 1983, Phillip Futures PL name now has been changed to Phillip GNI Futures PL, as Gerrard & National Inter Commodities PL (http://www.gni.co.uk) an SFA regulated broker, seek Phillip Futures for the Execution of Asian Stock
Index and other futures contracts.

Phillip GNI Futures offer you their services in

*STOCK INDEX : Nikkei 225, MSCI Taiwan Stock Index, Kuala Lumpur Composite Index, Hang Seng Stock Index
(Recommended at present), Standard & Poor 500, FTSE 100, NYSE Composite index. DJIA

CURRENCIES : Australian $, British Pound, Canadian $, DeutscheMark, Japanese Yen, Swiss Franc, French-Franc, New Zealand Dollar. (Coming up Singapore dollars & Malaysian Ringgit) Currency Crosses.

METALS : Aluminum, Copper, Gold, Silver, Palladium, Platinum.

INTEREST RATES : T-Bond, T-Bills, Euro-Dollar, Euro-Yen, Euro-DM, Japanese Gov't Bond, KLIBOR, German- Bunds, Italian Gov't Bond, Long Gilts, Short Sterling.

Oil : Crude Oil, Heating oil #2, Natural gas, Crude Palm oil, Brent Crude oil.

AGRICULTURES : Corn, Soybeans, Soybeans oil, Soybean meal, Oats, Wheat, Live Cattle, Lean Hogs, Feeder- Cattle, Lumber,
Pork Bellies, Cotton, Orange Juice, Cocoa, Sugar #11.

(Please note that all trading done with us is on a non-discretionary basis, which means all transactions done are only authorized by you, we don't offer managed Accounts as yet, and there is risk of loss in trading futures)

This is a multi-part message in MIME format.

--------------54DA3C953D9A
Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

FOR SALE: Wilson Mark IV VHF Handheld Transceiver ($35 + shipping)

This is an older VHF (2 meter) ham radio (see attached picture below).
Would make an excellent portable backup, emergency or packet radio. The
radio is in working condition, however, I do not have the antenna,
charger or owner's manual. It features:

+ 6 channels (crystal controlled -- see frequencies below)
+ Tone squelch decode
+ DTMF keypad (touch tone dialer)
+ HI/LO power switch
+ External Mic/Speaker
+ 11v, 500ma NICAD battery (last replaced 9/14/91)

Crytals included: 146.520, 146.670, 147.285, 147.165, 146.625 and
147.060 MHz

$35 plus shipping

If you're interested, please send e-mail to gabrown@bellsouth.net

From: Eric Trowbridge <jbart@bigsky.net>
Subject: GO CODE !!! GO CODE !!!

I am so happy that code is a requirement for the best portions of the
Amateur radio spectrum that I wish that there would be more testing that
required code. GO CODE, GO CODE Onward and most of all upward learn it
or stay on the frequencies that are more appropriate for you so that you
can't propagate bad and poorly referenced information about code.
Fortunately anyone that has done the code and is on the H.F. frequencies
never complains about learning it, they may not use it but they don't
complain. Notice the people who complain about it have to do it on the
internet because the frequencies that they use won't get the job done
otherwise, as for their belly-aching and complaining mentality so what,
learn code or stay off H.F. simple isn't it. GO CODE !!! GO CODE !!!

Eric KC7YGH
Code knowledge and proud of it!!!

From: moler@battelle.org
Subject: Opinions of TS-680

I'm considering purchase of a Kenwood TS-680S. This is a general coverage HF transceiver and covers 160m-6m. It is the twin to the Kenwood TS-140S which doesn't cover 6m.

I have seen the review done in QST in Oct 1988, but I'd like anyone who has any experience with this rig to give me some additional feedback on it's performance and user satisfaction. Thanks in advance.

From: David Rogers <drogers0@mailexcite.com>
Subject: Seeking: 2-Meter and 440Mhz HT

If any one can offer me a Handheld Ham Radio that works at 2-Meters or 440-Mhz, I prefer a Radio Shack but all solid equipment is good.
I'm also looking for a set of Ham Radios that work at 1300-Mhz, for Data Packet.

Thanks, E-Mail me if you have any information or suggestions.

Most large electrical supply houses will carry them. The one I like is made
by Delta Arrestors of Big Spring Texas. Cheap and effective. But there are
others.

Hello Corey,
I sure would like to know the version number of the CPU in that radio
and the serial number......
The mod does not work in 3 radios I have tried here. Beyond that,
Destina is displayed on F-33 not F-35.

Regards

Jack Summers

There are preamp projects in The Satellite Experimenter's Handbook, The Proceedings of the Central States VHF Society, and The VHF/UHF Dx Book, among other places. There are also suitable designs in *older* ARRL Handbooks. There was recently a MMIC preamp in QST, but that won't have a low enough noise figure to improve on an ordinary receiver at 70 cm. A few suitable preamps
have appeared in QEX. You really want a GASFET design. Far Circuits offers circuit boards for some of these preamp projects.

There are a number of companies which sell preamps. SSB Electronics and Advanced Receiver Research are well known, and make good ones. Expect to pay from $80 to nearly $200 for these, however. One of the few Hamtronics kits worth buying is their helically filtered 70 cm preamp. This is a good unit,
and fairly cheap too. Forget the Ramsey junk.

On 5 Dec 1997 04:27:41 GMT, kn6epsac@aol.com (KN6EPSac) wrote:

>Been curious about this for a long time. WHY is all aircraft Tx AM and not
FM?

It is primarily just a historical artifact. Back when they started putting
radios in airplanes, AM was the dominant voice mode, so the radios
were AM. Inertia, and a very large installed base, has kept it that way.
AM is generally "good enough" for air to ground communications, and
it does fit in a somewhat smaller amount of spectrum than FM.

There are a couple of other incidental benefits as well. The constant
AM carrier makes DFing fairly easy. And there is no FM capture
effect, so doubling is detectable, and often one can copy both signals
rather than just the stronger one. This has a safety benefit. AC could
switch to SSB, and they have for long HF circuits, but that loses the
ability to DF the signals easily because of the lack of a constant
carrier.

Replacing 570S Battery

Go to your local battery supplier and get a CR2032 Lithium Battery. RS
and most drug stores carry them.

Do the following in exact order.
1. Remove the top and bottom covers.
2. Remove the two brass-colored screws at each side of the top side
brackets holding the front panel to the main chassis. Loosen the two
brass-colored screws at the side bottom brackets (with a slot on each
side) holding the front panel.
3. Hook up the power supply to the radio and turn on the power supply.
4. Turn on the radio and then turn it off (leave the power supply on)
5. Slide the front panel forward and tilt it down and the battery can be
seen in it's holder---most likely a black plastic holder. Replace the
battery.
6. Turn on the radio and turn it off.
7. Replace screws and covers and you're back in business.

Subject: lightning strike detection

Does anyone know of a system for detecting lightning strikes within a
pre-defined area which displays the results as a 3D image on a computer?
There used to be a company in Texas that supplied such a kit in the
early 1980's. It involved placing 4 RX masts around a town and combining
the info from all 4 to generate a 3D map.
Any suggestions?

David Shenton.

Some FACTORY.TPL will not be usefull to you, you will probably
not be able to upload it (who knows what mod you are in)

> p.s. Yes, I did turn the squelch off when trying to upload.
> No hardware mods have been done.
>
> Any help would be appreciated.
>

> Larry
> N1ZGI

Do as follows:

Find e HEX editor.

1. Start the FT50 Programmer and save this as BLANK.RDF
(Start and save (BLANK.RDF is a empty .RDF))
2. Make a Template from your FT50, name it MY.TPL
3. Read from the MY.TPL the bytes on adress 05E2 and 05E3
(let's call them value1 and value2)
4. Edit the BLANK.TPL and set the byte on adress 05E2 to be
value1 and the byte on adress 05E3 to be value2
Change the first 3 letters in BLANK.RDF from RDF to TPL
5. Rename BLANK.RDF to BLANK.TPL
6. Upload the BLANK.TPL to the FT50

Everything will be normal now.

Don't play with the "Pull the cable out method"

Read the following info:

--------------2428246C390A
Content-Type: text/plain; charset=us-ascii; name="Ft50mods.txt"
Content-Transfer-Encoding: 7bit
Content-Disposition: inline; filename="Ft50mods.txt"

FT50R - Software Modifications
Ingra-Beton@t-online.de, Date: 31.03.97
==
This is modification of the first version, with same fix up's, typing
error corrections and better explanations (one Example too).

The Problem:

I have purchased a FT50R a couple of days ago and tried to make the MOD's
as described by Bill Childers (KE6VVW).

The removal of the solder jumper Nr.1 worked just fine and the
MARS/CAP was there. But as I tried to make the Trick to pull the
adapter cable out of the radio, ..., that don't work.

RT Systems says:
> The firmware inside the radio has been changed so that pulling the plug
> will not toggle the radio into a European mode. This change was made in
> radios with the 3rd and 4th digits of the serial number greater the 05.
> --
> Rod, RT Systems Amateur Radio Supply, Huntsville AL.
> Sales 1-800-723-6922, Tech 1-205-880-3093

So I had to find something else, here it is.

This is a method to do any MOD to your FT50R. The procedure is very simple
and fast done:

1. You make a template from your FT50R
2. Change 3 Bytes in the template
3. Upload the template to your FT50R

So you can switch to any BAND, you don't have do hardware interventions
or similar staff like pull the adapter cable out, ...

If you want do return the FT50R to its original state, just upload the
old (unmodified) .TPL to the Unit.

Information and explanations:

All MOD's can be made by software only. To do the MOD's you need the
ADMS 1C Software (I am using the 1.05 Version) and a HEX editor to
manipulate the .TPL file (I am working with .TPL file's only)
I am using HIEW 5.24 (Hacker's View) but any HEX editor will do the
job (PCT, Norton, Multiedit, ...)

Everyone has noticed the problem after making same MOD's to the Unit
that the old .TPL files can not be uploaded to the Unit any more.
There is a simple protection scheme (2 bytes) that prevents uploading
a .TPL file from a different hardware configuration to the Unit.

This is a description how to bypass this protection. By uploading a
.TPL file with different hardware configuration, (from a other Unit
or just to change the 2 bytes) the Unit will be assigned to this new
configuration.

First a description of Terms and Positions:

1. Current_Byte
.....
This is the Byte that tells the current Status (Hardware configuration) of
the Rig, you can get this Byte as follows:
- Make a .TPL file from the Rig.(Menu: <Radio> <Create template>)
- Edit the .TPL File with e HEX Editor.
v this is the first byte*
- On the File Address 05E2 is the sequence 07 XX
^ Current_Byte (Addr.:05E3)
- The Current_byte can be in the Range from 00 to 06.
- *the first byte is usually 07, by experimenting with nonstandard Numbers
you can change this byte also. (03 or same other value, but very rare)

2. Key_Byte (Security Key)
.....
The Key_Byte is at the same place as the Current_Byte, but in the .TPL
file you intend to upload.
If you want to upload a .TPL File to the Rig, the Key_Byte must match the
Current_Byte (that means that the Hardware configuration of the Unit and
the .TPL file you intend to upload must be the same). Just change with the
HEX Editor the Key_Byte of the .TPL file you intend to upload to be the

Current_Byte and you can upload anything (any .TPL file) to the Rig.
!!! No more CERR Messages !!!
(As mentioned in 1. if you change the first byte, you have to change this)
(byte also (in the .TPL File you intend to upload) to be the same Byte as)
(in the Template you have just made to read the Current_Byte.)

3. Band-Set_Byte
.....
- Edit the .TPL file you intend to upload with e HEX Editor
v* v Sub_Band-Set_Byte (Addr.:0CE8)
- On Address 0CE6 is the Sequence 07 XX XX
^ Band-Set_Byte (Addr.:0CE7)
This Byte tells the Rig to switch to Band XX (XX is a Nr.between 00 and 06)
To change the Band simply change the Band-Set_Byte to the desired Number.
After Uploading the Modified .TPL File to the Rig, it switches to the
desired Band and the Current_Byte becomes the Band-Set_Byte. That means if
you want to upload later something else to the Rig, you have to change in
the .TPL File you intend to upload the Key_Byte to the new Current_Byte
(with the HEX Editor).
The Sub_Band-Set_Byte tells the Rig in with Sub Band to switch (see Table)
*The byte (0CE6) is usually 07, rare 03 or same other number.

Example
.....
Now, to do a band change do as follows:
- let's assume you have BAND_A1 (USA) and want to switch to BAND_F3
- make a .TPL file from your unit (let's assume original.tpl)
- copy the original.tpl to mod1.tpl (this file we are going to upload)
- read the Current_Byte from original.tpl (as described in 1)
(for the BAND_A1 we assumed you have it will be 01))
- set the Key_Byte in mod1.tpl to be the Current_Byte (01) (as described
in 2). It is logical that the Key_Byte will already be 01, you've just
made the copy, but it is a matter of principle, keep reading.
- set the Band-Set_Byte in the mod1.tpl to 00 (for the BAND_F)
- set the Sub_Band-Set_Byte in the mod1.tpl to 03 (for the Sub BAND F3)
- upload the mod1.tpl to the unit.
- power off, power on, now you have BAND_F3, DONE.

- let's assume you want to switch now to BAND_B2a
- make a .TPL file from you unit (let's assume temp.tpl)
- read the Current_Byte from temp.tpl, it will be 00. (BAND_F)
- copy the original.tpl to mod2.tpl
- set the Key_Byte in the mod2.tpl to be the Current_Byte (00)
- set the Band-Set_Byte in the mod2.tpl to 02 (BAND_B)
- set the Sub_Band-Set_Byte in the mod2.tpl to 01 (Sub BAND B2a)
- upload the mod2.tpl to the unit.?
- power off, power on, now you have BAND_B2a, DONE.

and so on ...

Here are the MOD's (Band's) available:

```
I 00 01 02 03 I <- Sub_Band-Set_Byte (Address 0CE8)
--------------------------
00 I F1 F2a F2b F3 I
01 I A1 A2a A2b A3 I
02 I B1 B2a B2b B3 I
03 I C1 C2a C2b C3 I
04 I D1 D2a D2b D3 I
05 I H1 H2a H2b H3 I
06 I FrEE FrEE FrEE FrEE I
--------------------------
^ Band-Set_Byte (Address 0CE7)
```

When you set the Rig in a band (with the Band-Set_Byte) then you can switch from Sub Band X1 to X3 (if solder jumper 1 removed) with the key sequence:
- Hold Lamp and Knob by powering_on to switch to X3 Subband
- Hold Lamp and Knob by powering_on (you will see ALRST prS5) and then press the function key to switch to X1 Subband

The TX for the X3 Bands is:

```
BAND SUB_Band TX
F 3 120-222 320-500
A 3 140-174 420-470
B 3 140-174 420-470
C 3 140-174 420-470
D 3 144-146 432-438
H 3 144-148 430-450
FrEE 50-300 300-540*
```

*It will TX from aprox. 118-233 and 312-508
RX from aprox.71-540 and 600-999 depending from the Unit.

The Sub Bands 1,2a and 2b are with restriction variations in TX and RX and I am to tiered to examine them closely and write them down. I guess that they are not very interesting.

```
ARS lost - effect
-----------------
```
The FT50R has e BAND_PLAN like database and depending for witch country your unit is configured (A,B,C,D & H) it is using the repeater database? from his Memory for that country.

It is understandable that for the BAND_FrEE and BAND_F (TX:120-221&320-499) there is no data in the database because those band's are not for any specific country. That is why the ARS does not work any more, and not? same mess up (magic) in the memory of the unit.

That does not mean that it is not possible to enter additional data to the ARS memory database (I am working on it).

If you want to use the ARS again you just have to switch it into any ordinary country BAND_X and it will work again.

Original .TPL file

If you don't have a original .TPL file, you can make (improvise) one:
1. Start the ADMS 1C software
2. Goto the File Menu and save a .RDF file as original.rdf
(don't download anything from the Unit, don't use a template)
3. Change with a HEX editor the first 3 bytes from RDF to TPL
4. Set the Key_Byte in this file to be the Current_Byte of your Unit
5. Rename the original.rdf to original.tpl
6. Start the ADMS 1C and upload the original.tpl to the Unit.

This will switch your unit to BAND A1 (USA), ARS will work again !

Disclaimer:

Don't TX and RX at frequencies that you are not allowed to!
I do not guarantee the validity of this information,
as Yaesu may change programming or hardware so that some of the
techniques in this document may cease to function. I am not
responsible if these instructions damage your rig in some way. All
I can say is that I have performed the following procedures to my
unit, and I am quite pleased with the results. Your mileage may
vary, etc.

My 12 y.o. son is a new ham, and wants to get on six meters. We're looking
for an all-mode unit (FM and SSB), power not too important. Would consider
an HF/6M rig.

Please email to xxjturner@mapwizards.com, without the 'xx'

Thanks

John Turner

I have a FT 1000 , clean and excellent mech. shape.
It has the BPF, bandpass module installed that lets you monitor 2 different
bands at the same time...
Book but no box..
I am asking 2,350.00 and I ship.
thanks and good luck finding a FT 1000, they are very good radios, the best I
have ever owned but I need the money for Christmas, Merry Xmas to you and
73
Joe in Little Rock, AR
K5JOE is my new store-bought call sign.

Subject: Kachina comments

It seems like there is quite a bit of interest in the Kachina 505 with requests for information. I have operated the 505 for a couple months and offer the following as my initial impressions. I have been somewhat hesitant reporting on the 505 as I don't want to mislead anyone about the rig. Please accept the following for what it is and nothing more. Remember, one man's trash is another man's treasure, what I like or dislike may be totally different from another perspective. I bought the 505 primarily to remote control at a site 7 miles from my home. I am told the telephone modem will be available after the first of 1998 and can't wait to operate the 505 remotely.

First, the caveats, I am not an engineer, I have not used any sophisticated test equipment (only my eyes and ears) , my total operation time amounts to about 10 hours involving DX, casual contesting and rag chew. I operate about 90% CW and 10% SSB. When possible I tried to compare the 505 with a 1000MP sitting side by side in an A/B configuration.

Generally, the 505 is not Dick Tracy's wrist TV, what it is a very good HF Transceiver. The look, feel and operation is "different", not necessarily better or worse than top of the line YaWoodCom's, but subjectively different.

I can not hear any difference in the receiver sensitivity between the 505 and the 1000MP. The filters in the 505, ranging from 100 Hz to 3.5 KC are very effective and seem to be truly "brick wall" effective. The 505 filters are definitely better than the 1000MP. Off frequency interference heard on the 1000MP is totally eliminated with the 505. Also, the narrow settings (100 and 200 Hz) seem to produce less "ringing" in the 505.

The variable AGC speed capability in the 505 is great. I had no idea what a difference AGC speed made on received signals and receive fatigue. I find myself often adjusting the AGC for given band conditions. Very good feature in the 505.

The DSP is a mixed bag. Describing the DSP operation is quite difficult. First, it is very effective in reducing noise levels. However, when engaged it makes the receive audio somewhat "strange" and difficult to understand weak SSB signals. The more I listen to it the better I can understand the SSB audio. Stronger SSB signals are much easier to listen

to and understand. The DSP is wonderful for CW. There seems to be very little, if any, effect on the sound of a CW signal while considerably reducing the noise levels. There is a variable "Noise Reduction Level", but I can't tell much difference in the minimum and maximum settings. There does seem to be a correlation between the "Noise Reduction Level" and the AGC speed. I need to play with this combination a little more before I can form any opinion. Overall, I find the DSP very useful for SSB and outstanding for CW.

On the subject of noise, the 505 does not have a "Noise Blanker" as most other HF rigs have these days. Living in a high power line noise field, a "Noise Blanker" is critical for my operation. The lack of this feature in the 505 is definitely a minus for the rig. Also, I don't believe the notch filter in the 505 is as effective as the 1000MP. The 1000MP notch filter is not the best out there for my taste so the 505 is definitely lacking in that department. The DSP does lessen he power line noise, with the side effects stated.

One entirely subjective comparison between the 505 and the 1000MP is the overall receive audio. The general noise audio in the 505 sounds higher pitched and raspy to me, while the same noise level in the 1000MP sounds more "mellow" . For me, this results in the 1000MP being a little easier to listen to, especially in high noise and weak signal conditions. The "edge" is taken off the 505 by moving the IF shift -200Hz.. Probably shouldn't even comment on this point because it is entirely subjective and perhaps without merit.

The transmitter seems to be as advertised. I find my best audio reports are with the "Tx Eq" at the maximum bass setting with a Heil microphone. I haven't used the rig for SSB enough to comment, other than to say I have not had any negative audio reports.

The CW "Dynamics" adjustment is a very nice feature. I understand that the adjustment actually varies the CW waveform from soft to hard. CW ops will appreciate this feature. Also, the sidetone is activated by pressing the spacebar with the sidetone volume easily adjusted by keystroke or mouse. Much easier to spot the receiver on frequency than the 1000MP. The numerous other TX features of the 505 are all as advertised and don't need my impressions. The built in tuner is very fast and seems to work fine. The Smith Chart antenna impedance data seems to work fine and is a feature I really like. Another feature I particularly enjoy is the "Band Sweep" display. Performs as advertised and is useful for quickly looking at band activity especially for 10 and 15 meters.

The control software is very, very good. I have used various CAT programs to control the 1000MP and other HF rigs with some programs being better than others. It is obvious the 505 software developers have spend a lot of time making the software intuitive and easy to use. I generally prefer keyboard control rather than mouse control. The keystrokes required to control the rig are minimal and quickly learned. Mouse control is point and click (and sometimes slide). The primary operating controls are accessible directly form the operating screen. Some lesser used controls

are accessed only from drop down menus therefore requiring an extra keystroke or mouse click. I prefer every control being accessible directly from the operating screen and hope future software revisions provide for this. One point that deserves mentioning is the operation of the 505 is different than what you are used to with conventional radios. It took me several hours of operation to get the "feel" for using a keyboard to control a HF transceiver. Didn't really like it much at first (having used dials, knobs and switches for 35 years) but have now grown used to it and find in many respects it is easier to operate than the 1000MP. However, there is a certain primal quality to having the rig with it's knobs in front of you on the operating bench. Also, remember that you will have to have a computer monitor running at all times and if your monitor is like mine, it is RFI dirty. I find this a real problem and am in the process of trying everything I can to clear up some of the interference. There is an extension cable available for the 505 which would allow separation of the radio from the computer which may be one possible fix for monitor noise but I prefer to have the computer and rig together. If anyone has any advice as to a brand of monitor that is RFI free, I would really appreciate the information.

This has gone much longer than I had planned. Hope I have answered some questions. Overall, I find the 505 an excellent HF Transceiver with the exception of the notch filter, lack of noise blanker and pitch/tone (for lack of a better description) of general band noise. Many features of the 505 I like better than the 1000MP. The major pluses are the Band Pass Filters, DSP for CW operation, adjustable AGC, CW adjustments, Band Sweep, Smith Chart impedance data, American made with customer support that is truly exceptional, but that is another story.

I would be happy to answer any questions anyone might have and if you want to stop by my QTH in southern West Virginia for a hands on demonstration just drop me an EMail. 73's, Sam--K8WVA--

Bill (N5WRX) -

Some guys on the net (the price police for example) are willing to
look at a price thats posted, and then make assumptions about it's
fairness, with *no* knowlege whatsoever about the specific items
that is being sold. They feel justified in commenting in some very
negative terms about something they truly don't know about.

I don't always get my parts in nice, matched sets. In this
example, $15 is what I had to pay for that manual, separate from
the R4B, and, I had to look for it for weeks. The fellow that I
bought it from answered and inquiry from me about something else,
and wasn't even planning on selling it until I asked.

Sooooo, as a *courtesy* to the fellow that buys my R4B, I offer
the matching manual with the rig, which, I'm am also selling at my
cost, it is just that nice. I would personally prefer to keep the
```

manual for myself, but I figure that a guy that gets a shiney new
R4B will enjoy the experience even more with an
pristine manual. Bill, if you saw them you'd know, the fellow that
bought these two items for $215 will be a friend for life...

No, it is Class C biased and will not do SSB as it normally is wired..
IF you wired a bias ckt to the base of the xstr, it would do Class B or
AB and work on SSB...but if you dont know how to do it, get someone
who DOES....you CAN and WILL blow the xstr up if you dont set the bias
correctly!

Hello All;
I am selling 5ft Glen Martin Roof Tower w/ matching thrust bearing
and 9ft heavy duty aircraft aluminum 2" diameter mast. All in great
shape almost like new. Email: n2rif@amsat.org You can try calling
but my phone is usually busy cause Im on the net most of the time.
My ph# is 609-386-9382..
New it cost over $400 for everything. I am asking $290 OBO. It is
assembled. Shipping will probably be a bit hard to re-package. So
anyone who is within driving distance should probably re: My qth
is Burlington, NJ about 5 miles NorthEast of Phila,Pa and 12 miles
South of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Hello All;
I'm selling used 2mtr 2x11 Element Crossed satellite X-yagi and
70cm 2x19 Element Crossed satellite X-Yagi.
Both are in good cosmetic & working shape. For details Please re:
email: n2rif@amsat.org You can also try calling but my phone is
usually busy... My ph# is 609-386-9382.. I am Asking $155.00 OBO
for both. No CODs All cash offers will be considered
Also since both of these antennas are too large to probably ship.
It is better for anyone within driving distance of my qth to come,
look and consider buying these beams. My qth is Burlington, NJ
about 8 miles N-E of Phila, Pa and 12 miles S-E of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Date: Wed, 03 Dec 1997 07:50:09 -0500
From: Felix
Subject: FT-847 (again!)

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio
to be available in the USA in Mid February 1998. I don't think it has
aremote faceplate
or built in tuner. There is an optional "FC-20" tuner that will sit next
to the radio. No price
but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.
There are two optional Collins Mechanical filters in the second 45 KHZ
IF. One is
2.75 KHZ and the other one is 500 HZ. It appears this radio has the same
IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736
Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847
has some stuff specifically for satalite work (alpha Tagging)?
The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.

The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION and
has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746 has
a built in
AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this scope

operates faster but has less resolution. Also, the IC-746 has TWIN
PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF
and then "SLOPE DSP
Tuning " in the ausio section.

boundary="------------320E4050252EDDF9CEAA1D07"

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio

to be available in the USA in Mid February 1998. I don't think
it has aremote faceplate

or built in tuner. There is an optional "FC-20" tuner that will sit
next to the radio. No price

but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.

There are two optional Collins Mechanical filters in the second 45
KHZ IF. One is

2.75 KHZ and the other one is 500 HZ. It appears this radio has the
same IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736

Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847

has some stuff specifically for satalite work (alpha Tagging)?

The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.

The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION
and

has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746
has a built in

AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this scope

operates faster but has less resolution. Also, the IC-746 has TWIN PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF and then "SLOPE DSP

Tuning " in the ausio section.

Colin R. Wright wrote:

In looking at the chatter on the newsgroup about this rig, I was

wondering if anyone had any comments/answers on the following:

- Removeable faceplate: It looks like this is not going to be an

option, but I didn't see an "official" stance.

- Dual-band receive (i.e., monitor 2m and 6m call frequencies

simultaneously): Again, nothing "official" that I can find in the

newsgroup.

- 222/1296 capable: Is it possible that either/both of these bands

could be included in the US model as add-ons (or just plain built in)?

- Will this rig do Mode A and Mode K satellite functions (2m up/10m

down or 15m up/10m down)?

- Is the FT-736 being discontinued due to this radio?

Thanks in advance!

Subject: HELP!! I need some advice on my first radio (HT) purchase!

KB4UTZ@yahoo.com wrote:

>I need some help from those of you with handy-talkie (HT) experience.

>I just passed my Tech Plus exam and am now in the process of choosing my
>first radio. I enjoy hiking, camping, and backpacking so I am currently
>leaning toward getting a dual 2m/70cm HT rig as opposed to a mobile rig. I
>do plan on listening/using the radio during my daily commute of about 25
>miles into metro Atlanta (Georgia) also though.

Kirby,

You will "sooner" than "later" acquire both a HT and a mobile because
both have their advantages and disadvantages. Nothing wrong with
picking up the HT first. Since you mentioned you like hiking (far
away from a repeater?) , I would steer or lean toward a radio that has

the potential of putting out 5+ watts. This narrows down the field. At 5 watts, then I would see which radio has or can get the larger battery so you have more air time. No fun having a radio with 2-4 hours of battery life between recharges and be on a hike and run out of juice. This again narrows the choices.. Plan on getting an optional antenna cause the rubber duck antenna will work fine in cities but the further away you get, the worse the performance till nothing.. Do you have adequate 70cm repeaters in your area to warrent the dual bander? If not, you can save a bundle of money that could go toward the mobile, by buying a single band radio.. Buy a single band radio(s) now and expand into the 70cm band later?

>My specific questions are:

>1. What radio would you recommend for a 2m/70cm beginner like me? Mobile
>or handheld? Why?

See my statement above. You will eventually get both. We were all beginners at one time. I would suggest joining a Ham club in your area and asking the members for their opinion and experiences and they would be glad to show you their radios up close and in person and tell you all the pros-cons of each...

>2. Depending upon the answer to #1, what radio(s) would you recommend and
>why?

Icom, Yaseu, Kenwood, Allinco all make good radios, both HT's and mobiles... Hummmm, not much help am I?? I have a mixture of all four brands if that tells you anything, and each one does something a little better than the others, but none are bad.

>3. As I stated before, I am leaning toward a handheld... in particular
>possibly either the Yaesu FT-50RD or the Kenwood TH-G71A since they both
>have the MIL-STD 810 rating. Would either of these two radios be a good
>choice? Would one be preferable over the other? Why? What are the pros
>and cons of each radio? Or... should I forget these two radios and
>consider something else altogether?

Good choices. I have not owned either, but have heard good things about both... Like I mentioned above, if you are hiking far away from repeaters, I would want a radio that puts out 5+ watts and have a relatively large battery capacity, with a telescoping antenna... Do these models have that ability??? Check the catelogs.

>4. Are there certain radio manufacturers that I should stick with (or
>conversely avoid) in consideration of radio quality, frequency of repairs
>needed, etc.?

Icom, Yaseu, Kenwood, Allinco all make good radios.

>Thank you in advance for any assistance you can provide.

I have a Drake dream station for sale. TR-7 with NB,Fan,CW and SSB
filters,PS-7,SP-75 speech processor,MS-7 speaker,7077 Mic,R-7 receiver
that will xcv with TR-7. R-7 has NB,CW,SSB,AM filters, all cables. I
also have service kit with extender boards, tuning tools, and service
manuals on all. Everything is like new and works great. I really don't
need all this, but hate to break up. Will sell all for $1650 plus
shipping. This is a rare and complete station. Also have a MN-7 tuner
to match for another $150. 505-437-8658 or email.

Date: Tue, 02 Dec 1997 23:32:05 -0800
From: Ron Castro
Subject: FT-50R ARS Probs Fix!

Like many who hardware-modified their Yeasu FT-50R's for MARS/CAP xmit,
I noticed that my Automatic Repeater Shift (ARS) function had defaulted
to the European band plan, rendering it useless for US repeater
operations. I use the ADMS 1C programmer (v 1.04), but neglected to
save a template of the origional USA configuration. Even if I had, I
understand that making the hardware mod makes the file unusable.

Good news! Despite reports that the ARS function is "hosed" after the mod, it CAN be restored! To find out how, check out the FT-50R homepage at:
www.members.aol.com/aeimn/ft50/articles.txt
Look near the end for the Ingra-Beton article. The article shows how to use a hex-editor to change the .TPL file (although it works on .RDF files as well) to restore the functions, while retaining MARS/CAP xmit capability. I found that only ONE BYTE needed to be changed in my file to fix the problem, and although I have never edited a hex file before, it worked right away! Any hex editor can be used...I used XTREE Gold, but there are dozens of others out there, including the unfreindly DOS debug. Please read the disclaimers in the article.

One tip...read the article VERY carefully, make sure you FULLY understand it before proceeding, and if you are squemish about hex editing, talk to someone who knows about it to make sure you find the right addresses in your file the article refers to. Save a file that you know works with your radio as a back-up!

Three cheers for "Indi" for solving a problem that has stumped FT-50R users for a long time!

From: Yves Remedios
Subject: FT-8100 mod - RTM10B has it, why not share it???

In article , Kevin Swanson
writes
>I found it myself. I opened the top of the radio and looked for Zero Ohm
>resistors or Jumpers. I Found a Zero Ohm resistor in the front left corner
>looking down on the radio. Just above it and slightly to the left is an
>empty resestor position.
>
>Removing the resistor will OPEN - TX
>Adding a jumper to the top pads will CLOSE - RX to just the ham bands.
>I could not find any way to open the cellular block

Expanded TX

To change from C2>C3 or B2>B3
Remove R3028 and reset radio

To change from C1>C2 or B1>B2
Remove r3029 & R3031 and reset radio

To reset radio hold [VFO/MR] + [REV] then turn power on

Don't know about the cellular block - I'm not interested in listening to cellular traffic!

> Gary Coffman KE4ZV | You make it |mail to ke4zv@bellsouth.net
> 534 Shannon Way | We break it |
> Lawrenceville, GA | Guaranteed |
>

Hi Gary,
I agree with all your comments. On our local repeater, I was one of the people who very much wanted CTCSS to be retrofitted to the unit, so became involved in making it happen.

We are required, on 2m. repeaters, by our licence to have 1750Hz access. However, we can have CTCSS also. We have OR'd the two access modes, as you have mentioned and this gives all users an opportunity to access. CTCSS is far better, as in our application, the decoder module has a much smaller bandwidth than that required for use with 1750Hz (+/-25Hz over here for 1750) and thus an improved signal to noise ratio for detecting the access tone.
When CTCSS is detected, the squelch on the repeater is effectively off and mobile signals will 'swish' up and down rather then chop out and in with mobile flutter. The same applies in reverse on the amateurs rx.

The repeater does not generate CTCSS when giving its identification in beacon mode. Therefore with a decoder on the amateurs rx, they do not have to listen to the beacon. They only hear the repeater when someone access' it.

I appreciate that you will understand this, but these are the enhancements I was meaning in my first reply, that the average user see's as No Value

Add. They need to be convinced (not me Yves). In UK terms they ARE enhancements, but until people have seen/heard the benefits of CTCSS it is very hard to get them to understand the benefits.

Alan G.

Subject: What is the deal - Kachina 505DSP? Junk or what???

This is really kind of funny. I performed a search of all the archived news postings from this group on the Kachina 505, and of the 30 or so postings, 90%

of them where from folks begging for a review. I saw guys claim to have purchased 505's, offer side by side comparisons between the 505 and a FT1000MP

for instance, but they never produce crap. What gives? Is this rig such a piece of crap that no one want to discuss it, or better yet, compare it to anything? I've never seen a subject so avoided in my life. What gives Kachina owners? Don't want to discuss it? Waste of money? Greatest rig ever

made? Quiet, noisy, hard to use, easy to use, IF DSP suck, kicks butt, what? Blows the 1000MP away, can't touch the 870, makes the 756 look like a toy, can't even touch the audio dsp of the 920, what???????? Sorry to rant and rave, but I have 2k burning a hole in my back pocket, want to buy a new HF rig, but just can't decide, and certianly don't want to rule out a potential killer rig like the Kachina 505DSP! Thanks for listening, 73, Mike... WQ0N

From: Felix
Subject: 847 cost???

QST usually reviews a radio after it is in the market for 4-6 months. I
think the reason is to give the manufacturer a chance to correct
mistakes. MFj complained that the TNC 1278 go a bad review since it was
the first batch off the assembly line(trust me it wouldn't
have made a difference if it was 6 months later. Hee hee). If Both the
Icom IC-746 and
Yaesu FT-847 come out in February/March 1998 I would expect both to be
reviewed
by the Fall of 1998.

Subject: Alinco $88 handhelds

I called last Wednesday and ordered $88 UHF model by phone. It was
delivered on Monday, not bad considering no UPS deliveries on Thursday
and Friday. Also, the $88 included prepaid shipping. Where can you
beat a deal like that?? It is a great little radio, works great
keying our 443.450 repeater that is about 12-15 miles away (as long as
I am outside the steel roofed office building). Come on guys, give it
a break, its an $88 radio.

From: m_white@juno.com (Michael White)
Subject: FS: Vibroplex Iambic Deluxe paddles, plus matching keyer control panel

For sale: Vibroplex Iambic Deluxe paddles. All chrome parts and base with red finger paddles. In mint condition; entirely as new.

Includes an accessory panel for controlling a keyer. This is a small box that attaches on the side by means of existing screws on the bottom of the paddle; no modifications. The box has 4 small pushbuttons for controlling various functions of a keyer; you wire it up as needed. The box is very nicely chromed

and matches the paddle base exactly. The pushbuttons are red, matching the finger paddles.

I also have a very nice plastic cover for the paddle that I'll include. It has

my callsign neatly engraved in it, so you'll never forget who you bought it from :-)

$95 shipped UPS anywhere in the lower 48 states. Email if interested. Thanks.

Mike, N4PDY

If you can operate a screwdriver it is fairly easy. The procedure must
be followed exactly though to avoid a repeat of the problem. I will
e-mail it tomorrow when I get to the shop..

To mod the ic 32 for extended receive, just type in F-set until the
screen says PLACE, then set PLACE at 100, and that's it. Your
extended receive will work. try it!

YEASU FT920 TX OUT OF BAND

With the radio off, press[STEP] and [LOCK] (under VFO-A) and hold
these two keys in while you turn the raido on. Now release the two
keys.
Enter the following password: 0761161, then press [ENT].
Press [MENU],Rotate VFO B though the "U" settings till you get to the
"F" Menu (F-01 F-35).

TUNE to "F-35 your Display will say "DESTINA" PRESS ENTER
AND SELECT "OUTSIDE",Using VFO B.that is all there is to it!!!
THIS WILL LET YOU TX 1.8 TO 54MHZ,TO UNDO THE MOD SIMPLY SELECT F-35,
AND PUT IT BACK TO "USA"

The only other adjustments that are of any use is F-09 AM modultation.

After adjustments are made, Press [MENU] to save the new setting and,
exit to normal operation.

WARNING ANY OTHER ADJUSTMENT CAN AND WILL DEGRADE THE RADIO'S
PERFORMANCE.
I CANNOT BE RESPONSABLE FOR YOUR ACTIONS...

>adjustment of the RF gain control. Does anyone know how to make the AVC work in
>CW/SSB mode on this receiver? Thanks.
>
>Mike, N4PDY

Mike,

the AVC only works on AM, not CW or SSB. Had a 110 for over four years
and no one could get that to work. I recall something in the fine
print on the manual. The '110 does not use a product detector like
upper grade radios do... therefore the AVC is prone to overload from
BFO leakage. I have an HQ-180 and it works fine in that one.

Date: 3 Dec 1997 04:44:59 GMT
From: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Subject: 17.9 MHz IF?

Just opened up the case of a Motorola HT, operating on 138.960 MHz.
The rcv crystal is marked 52286.66 (=52.28666 MHz). It's third multiple
lands at ~156.86 MHz. This implies the rcvr's IF is 17.9 MHz. Is this
a common IF for Mot VHF-high band gear?

Will this radio be easy to recrystal for 146 MHz?

(The transmit crystal is marked 46.320 MHz; the frequencies of these
crystals are not fundamental, correct?)

Thanks in advance!
Jeff KH2PZ

Gary, I guess you didn't comprehend the basic message in my unofficial
communique. I'll reiterate, don't give them any ideas or ammunition in
they're quest for the domination of the worlds communications.
Bill Gates likes to play monopoly not as a board game, but as a global
game.

Much less than most folks think... Generally <50 watts.

Isn't just amazing how much range one can get out of a radio when it's
antenna is at 10 or 20 Thousand Feet, even with just a few watts.

I also heard that Yaesu made the 8100 harder to modify. Not sure
about this though. I have an 8100 and there don't seem to be any mods
other than the MARS/CAP available.

Procomm, Procomm Plus, Telex, QModem, or ANY other Terminal program will
get the job done. However... you may be required to tell the program
just what COM port and IRQ the TNC is on. The same advice holds true
for PaKet, TPK, WinPack, Sally, etc. The ONLY terminal program that I've
seen that was really fussy was Kantronic's Kanterm that comes packaged
with their TNC's. Wants to see COM 1 or COM 2 only.

I had the same problem. Was a bad plated through hole on the bias
board. Easy fix. The board is the oone next to the final cage. Pull
the tubes and check the bias voltage. You will find it on one side of
the board and not the other.

Later.

From: Phil Wheeler
Subject: QRP rig OHR100 vs. Norcal 40a

Daniel,

I've built the NC-40A and the Sierra, as well as an OHR-400.

A big plus of the OHR I built was that the torroids came pre-wound; the NorCal radios required me to wind the torroids (over 40 for the Sierra).

The OHR-100 may be easier for you to build, tho the NC-40A will likely draw less power and be lighter (nice for backpacking!).

OHR-100 may also give you better freq coverage; dunno personally, since I have not read the OHR-100 specs.

Both Wilderness Radio (NC-40A) and Oak Hills Radio (OHR) are very good to deal with.

Phil

Subject: * FS: Drake R4B

Bill (N5WRX) -

Some guys on the net (the price police for example) are willing to
look at a price thats posted, and then make assumptions about it's
fairness, with *no* knowlege whatsoever about the specific items
that is being sold. They feel justified in commenting in some very
negative terms about something they truly don't know about.

I don't always get my parts in nice, matched sets. In this
example, $15 is what I had to pay for that manual, separate from
the R4B, and, I had to look for it for weeks. The fellow that I
bought it from answered and inquiry from me about something else,
and wasn't even planning on selling it until I asked.

Sooooo, as a *courtesy* to the fellow that buys my R4B, I offer
the matching manual with the rig, which, I'm am also selling at my
cost, it is just that nice. I would personally prefer to keep the
manual for myself, but I figure that a guy that gets a shiney new
R4B will enjoy the experience even more with an
pristine manual. Bill, if you saw them you'd know, the fellow that
bought these two items for $215 will be a friend for life...

No, it is Class C biased and will not do SSB as it normally is wired.. IF you wired a bias ckt to the base of the xstr, it would do Class B or AB and work on SSB...but if you dont know how to do it, get someone who DOES....you CAN and WILL blow the xstr up if you dont set the bias correctly!

Subject: FS: L-New Glen Martin Roof Tower+More

Hello All;
I am selling 5ft Glen Martin Roof Tower w/ matching thrust bearing
and 9ft heavy duty aircraft aluminum 2" diameter mast. All in great
shape almost like new. Email: n2rif@amsat.org You can try calling
but my phone is usually busy cause Im on the net most of the time.
My ph# is 609-386-9382..
New it cost over $400 for everything. I am asking $290 OBO. It is
assembled. Shipping will probably be a bit hard to re-package. So
anyone who is within driving distance should probably re: My qth
is Burlington, NJ about 5 miles NorthEast of Phila,Pa and 12 miles
South of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Hello All;
I'm selling used 2mtr 2x11 Element Crossed satellite X-yagi and
70cm 2x19 Element Crossed satellite X-Yagi.
Both are in good cosmetic & working shape. For details Please re:
email: n2rif@amsat.org You can also try calling but my phone is
usually busy... My ph# is 609-386-9382.. I am Asking $155.00 OBO
for both. No CODs All cash offers will be considered
Also since both of these antennas are too large to probably ship.
It is better for anyone within driving distance of my qth to come,
look and consider buying these beams. My qth is Burlington, NJ
about 8 miles N-E of Phila, Pa and 12 miles S-E of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Date: Wed, 03 Dec 1997 07:50:09 -0500
From: Felix
Subject: FT-847 (again!)

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect the radio
to be available in the USA in Mid February 1998. I don't think it has aremote faceplate
or built in tuner. There is an optional "FC-20" tuner that will sit next to the radio. No price
but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380 for comparison.
There are two optional Collins Mechanical filters in the second 45 KHZ IF. One is
2.75 KHZ and the other one is 500 HZ. It appears this radio has the same IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe that the FT-736
Satallite radio will be discontinued as soon as this radio hits the store shelves. The FT847
has some stuff specifically for satalite work (alpha Tagging)?
The price I believe will be $1700 to $1800 USA Tuner $400 plus the filters etc.
The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION and has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746 has a built in
AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this scope

operates faster but has less resolution. Also, the IC-746 has TWIN PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF and then "SLOPE DSP
Tuning " in the ausio section.

boundary="------------320E4050252EDDF9CEAA1D07"

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio

to be available in the USA in Mid February 1998. I don't think
it has aremote faceplate

or built in tuner. There is an optional "FC-20" tuner that will sit
next to the radio. No price

but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.

There are two optional Collins Mechanical filters in the second 45
KHZ IF. One is

2.75 KHZ and the other one is 500 HZ. It appears this radio has the
same IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736

Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847

has some stuff specifically for satalite work (alpha Tagging)?

The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.

The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION
and

has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746
has a built in

AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this
scope

operates faster but has less resolution. Also, the IC-746 has TWIN
PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF
and then "SLOPE DSP

Tuning " in the ausio section.

Subject: HELP!! I need some advice on my first radio (HT) purchase!

KB4UTZ@yahoo.com wrote:

>I need some help from those of you with handy-talkie (HT) experience.

>I just passed my Tech Plus exam and am now in the process of choosing my
>first radio. I enjoy hiking, camping, and backpacking so I am currently
>leaning toward getting a dual 2m/70cm HT rig as opposed to a mobile rig. I
>do plan on listening/using the radio during my daily commute of about 25
>miles into metro Atlanta (Georgia) also though.

Kirby,

You will "sooner" than "later" acquire both a HT and a mobile because
both have their advantages and disadvantages. Nothing wrong with
picking up the HT first. Since you mentioned you like hiking (far
away from a repeater?) , I would steer or lean toward a radio that has
the potential of putting out 5+ watts. This narrows down the field.
At 5 watts, then I would see which radio has or can get the larger
battery so you have more air time. No fun having a radio with 2-4
hours of battery life between recharges and be on a hike and run out
of juice. This again narrows the choices.. Plan on getting an
optional antenna cause the rubber duck antenna will work fine in
cities but the further away you get, the worse the performance till
nothing.. Do you have adequate 70cm repeaters in your area to
warrent the dual bander? If not, you can save a bundle of money that
could go toward the mobile, by buying a single band radio.. Buy a
single band radio(s) now and expand into the 70cm band later?

>My specific questions are:

>1. What radio would you recommend for a 2m/70cm beginner like me? Mobile
>or handheld? Why?

See my statement above. You will eventually get both. We were all
beginners at one time. I would suggest joining a Ham club in your
area and asking the members for their opinion and experiences and they
would be glad to show you their radios up close and in person and tell
you all the pros-cons of each...

>2. Depending upon the answer to #1, what radio(s) would you recommend and
>why?

Icom, Yaseu, Kenwood, Allinco all make good radios, both HT's and
mobiles... Hummmm, not much help am I?? I have a mixture of all four
brands if that tells you anything, and each one does something a
little better than the others, but none are bad.

>3. As I stated before, I am leaning toward a handheld... in particular
>possibly either the Yaesu FT-50RD or the Kenwood TH-G71A since they both
>have the MIL-STD 810 rating. Would either of these two radios be a good
>choice? Would one be preferable over the other? Why? What are the pros
>and cons of each radio? Or... should I forget these two radios and
>consider something else altogether?

Good choices. I have not owned either, but have heard good things
about both... Like I mentioned above, if you are hiking far away from
repeaters, I would want a radio that puts out 5+ watts and have a
relatively large battery capacity, with a telescoping antenna... Do
these models have that ability??? Check the catelogs.

>4. Are there certain radio manufacturers that I should stick with (or
>conversely avoid) in consideration of radio quality, frequency of repairs
>needed, etc.?

Icom, Yaseu, Kenwood, Allinco all make good radios.

>Thank you in advance for any assistance you can provide.

Subject: Newbie Question / Mini receiver

Hello,

I_m a complete beginer to shortwave, but I did like to buy a very
small receiver for traveling.

I want to use it, to be informed in remote places and countrys where
you can_t rely on public avaible informations.

I could get a Sony ICF-SW 1E, which has the size i would like, but is
it a good shortwave receiver?

Are there alternatives to this receiver?

Hi,
I am looking for a heavy old nonwoking radio for my Son to play with!
Must be clean and safe: Knobs need to have set screws holding them on to
prevent removing and swallowing. He is only 21 months but loves to play
with my
working stuff.
I posted in boatanchor group first.
Thanks,
Jack

I have a GAP Titan mounted at 8' (To allow walking under it without
getting "clotheslined" on the counterpoise). It *does* work and one
could easily earn DXCC with it in a few of months. HOWEVER, my dipoles
hung at 35 feet on 40, 20 & 15m work better. I just don't have room for
4 or 5 more dipoles. :-)

Subject: FS: Hallicrafters "Loudenboomer Mk II a Amp

This amp has been stored for a while but is in real nice (dusty)
condition. Said to be in use when the Ham became silent key 6 years ago.
Would restore to new and has spare 3-400 Z tube as well as the one in it.
$450 .oo firm plus shippping from 79761. Looks sort of like a 30L-1
with power supply in separate case that is a bit larger. Have Dow Key
relay box for use with older rigs. I wont say it is working now, but its
obvious that it has and nothing is burned or looks bad. Would consider
trades for newer amps or HF gear, Im just not a collector and already
have an Alpha. Thanks, feel free to inquire about possible trades.

Subject: FT-920 vs FT1000mp

I bought the FT-920 and really like it. Of course I don't do any contesting
or anything else very serious. It was a nice upgrade for me from a TS-450.
For what I want to do, it is a very nice rig at the right price. I am able
to hear and work a lot more dx with the 920, and 6M is a lot of fun when the
band is open.

From: k1bqt@aol.com (K1BQT)
Subject: How much power do aircrafts TX?

Hi--

Depends upon the type of aircraft. Small private aircraft use small 12-volt
transceivers that put out signals in the 10 watt range. Commercial class
aircraft use more expensive radios that run on higher electrical system
voltages and put out considerably more power. Control towers generally run
low
power because the stations they are talking to are all in the local area and a
thousand feet or more up in the air. If you want to hear distant towers
clearly, you may need to install a directional antenna with a mast-mount
preamp.

Hope that helps.

Finally, the broadcasting industry, their investors and all their supporters in government have figured out how to force every TV viewer to have a "pay" box attached to every existing TV in the country, if not the world. This marks THE END of free, advertiser paid off-air television as it has existed since the beginning of television broadcasting.

From the first, I never believed that the public would willingly pay the projected cost of HDTV willingly, given the reasonably good quality prevalent in current NTSC broadcasts in most places, and I still believe that. There is just so much you can improve on 'good', and I know I don't see any attractive advantage to HDTV, however 'clear' the picture.

It now becomes clear that the public will indeed have a choice-pay up or don't watch TV at all. No more Advertiser-commercial-paid TV for free.

Now all the push for HDTV over the past few years is explained. Mr. Hundt was apparently very successfull in his apparent Quest. What remains to be seen is how well the mandated change holds up.

>I keep waiting for some connection to amateur radio equipment or policy
>in this thread.

TV broadcast is the largest consumer of spectrum below 1 GHz. When that giant rolls over, all the lesser players have to pay attention. Of particular interest to amateurs, the final bandplan releases the spectrum currently assigned to TV channels 2-6 and 63-69. That 72 MHz of freed spectrum may be able to relax some of the pressures placed on amateur VHF/UHF allocations by the little LEOs, and others, desiring new spectrum below 1 GHz.

In addition, the switch from analog NTSC to DTV has considerable implications with regard to TVI susceptability. That also is of interest to amateurs. And it isn't all good news because broadcasters will be sharply reducing power, so over the air TV will become more of a weak signal mode than it currently is.

Offsetting that somewhat is the more robust nature of the modulation and coding. But DTV will *not* use the sort of robust FEC which would make it immune to all types of interference (that would require more

bandwidth for the coding overhead than is available in a 6 MHz channel). And the 8VSB modulation chosen is also not an ideal choice for operation in the face of certain types of interference. If DTV is successful in luring many viewers away from cable, amateurs are bound to face new TVI challenges.

We may also see the reverse situation, IE DTVs interfering with amateur equipment. A DTV receiver will be more computer than TV, and we already know the RFI computers can generate. The sweep rates (and magnitude of sweep currents) for the large 16:9 HDTV displays will also produce a new level and type of potential RFI to amateur operations.

So it is a good news, bad news situation for amateurs. We need to be aware of how we are likely to be affected by these sweeping changes in the TV broadcast market. And we also have to be aware of who our new neighbors will be in the newly vacated TV spectrum. There may be compatiblity issues involved with them too.

And finally, the mass market introduction of a new technology will have implications with regard to what will be cost effective for amateurs to adopt and adapt from it for our own uses. High speed RF modem technology will be sharply impacted by the mass market DTV receiver. A new generation of fast and cheap RF modems based on DTV technology could have a major impact on the sorts of operations amateurs may pursue at VHF/UHF.

Larry, you don't have a good grasp of broadcast economics.

Pay TV is a high risk low return retailing of programming. With
the exception of a few boutique events, it is low margin for the
content deliverer, and has the high overhead of retail sales.
The industry average annual ROI for Pay TV is 3%-6%, and only
about 30% of Pay TV events break even. (Of course there are
a few boutique events which do very well indeed. But there is
no daily market for that.)

Subscription TV has lower risk, higher volume, but still a fairly
low ROI. It is still retailing of programming, but more analogous
to K Mart or Walmart style retailing than is pay per view. Annual
ROI is on the order of 6%-10%, and "churn" still makes cost of
sales fairly burdensome.

But free advertiser supported TV is a horse of a different color.
The industry average annual ROI is 22%. The free broadcaster is
selling a different product than the pay TV delivery agents. He isn't
retailing programming to viewers. Programming is something he
buys as bait to lure in the product that he actually sells. That's the
audience.

The business of the free TV broadcaster is selling an audience
demographic to an advertiser. And advertisers are willing to pay
handsomely for that demographic. In prime time, advertisers pay
(collectively) an average of $32 per viewer per hour. And the
broadcaster incurs very little overhead cost of sales to get that
sort of revenue stream.

There are very few pay TV events which can command $32 an
hour from viewers, and no subscription TV services which can
command that sort of revenue. But it is the routine meat and
potatoes of the "free" broadcaster. He understands this business
very well, and knows where the large revenue streams live.
He isn't foolish enough to throw that away to get a lower ROI
at higher cost and risk by trying to retail programming to viewers.
He leaves that to the niche providers who fight over the fragmented
crumbs outside the mass audience.

I've been doing this for over 30 years, and I know how it works, and
where the money is. It isn't in retailing programming to viewers.
You can be very sure that the programming with the largest popular
appeal will continue to be "free" programming broadcast to anyone
who will tune in. The broadcaster will make sure of that, because
that's where the money is.

No, it is not worldwide. (You didn't think the US and Europe would *really*
agree on a single standard did you? The Not Invented Here syndrome is
way too strong for that.) The US and Europe have settled on totally
incompatible transmission standards, and Japan has settled on one
that takes a bit from each of the others, but is incompatible with both.
It is likely that the rest of the world will adopt one of these three
standards,
but likely a different one of the three on a country by country basis.

>If this is worldwide, it will really help us. We generate most of the
>worlds programming. Lots of Marks, Francs, Pounds coming back here (or
>at least the West Coast). It will also be nice when I am in Germany,
>to use the same set and DSS system as I use here. Digital TV (DTV) to
>me is a blessing.

The world has agreed on a worldwide *production* standard. That's a
different thing from the transmisson standard in the digital era. So
worldwide program distribution will be much easier than in the past.
And as you surmise, this will largely be to the benefit of the current
large program production companies. (Though it does open a niche
for the small producer because he won't be burdened with distributing
different versions of the same programming. Only the major companies
can afford to do that now.)

But you won't be able to take your US transmission standard TV to
Europe and watch European transmission standard broadcasts.
The modulation formats are totally different. (Truth be known, the
European choice has a number of significant advantages over the
US choice. Shades of NTSC versus PAL all over again.)

Once everything is back to baseband bits, the video signals are
the same, so you *may* see more multi-standard sets produced
which will decode the different transmission standards back to a
common baseband. But that's likely to be an extra cost option.

Subject: Programming a Regency RH256B VHF 2-way?????

Hello filks,

I need some assistance with self-programming a Regency RH256B VHF 2-way. I know that it can be done if one "activates" a jumper. But, there are two questions: 1 - Where is the jumper? 2 - What are the programming steps? (I believe that it is similar to programming a scanner, but I have no idea how to put in the PL Tone frequency.)

I appreciate any, and all, information anyone can give me on this. PLEASE reply via e-mail (at least cc me via e-mail) as I do not have access to a news server that carries this group.

Thanks,
Richard

TV sound is 25 kHz deviation, which requires a receiver bandwidth of 55 kHz.
FM broadcast is 75 kHz deviation, which requires a receiver bandwidth of
165 kHz, and is spaced on 200 kHz channel centers to provide some guard
band protection. The FT50 wide-FM mode can handle TV sound, but is too
narrow for FM broadcast. That should make it satisfactory for Wx sat pix.

(whether you are concerned investor/hedger or speculator, this info can change your strategy on the way you do your investments)

The aftermath of regional Asian stock markets, is going to have a much deeply rooted affair with their economic background, as well as their future prospects, expectation of further defaults by banks and companies exposed to Forex & equity e
xposure is on the cards.

Some have connected these problems with major hedge fund aggressive selling of local Asian currencies. The Hong Kong dollar, been the only one not affected as yet, due to excessive monitoring of levels by the HKMA, speculation has now risen

that the next couple of weeks should show the HK dollar its proper level, to some dealers its seen as HK$ 10-15 to the greenbuck (US=1), once its current peg gives way.

Now where does the forces of Chain reaction leaves the other markets no matter whether Equity, Debt, Agricultural, Asian, European, North American, where-so-ever-what-so-ever, When badly affected Asian markets collapse, they send a chill thr
ough major Stock Exchanges around the globe, there has always been
a relatively of connections as for example a company in Europe or USA may be deriving their profits from Asia, selling or buying products & services with Asia. Billion dollar fund management advisers dump stocks on a regional basis, and look
out for warning signs on a global basis, this fact is evident by looking at the 87 crash or this year's 1997 repeat.

Portfolio's are re-positioned for long term prospects, or for the better of risk management, with this complete change of strategy, where does all this big money do to the unexposed Investor, it could either be an great opportunity or disast
er for the uninformed
investor.

There are ways and means whereby an investor can protect his exposure by trading Futures contracts with PHILLIP GNI FUTURES PTE LTD, AND FOR THIS WE HAVE A SPECIAL

This is a multi-part message in MIME format.

--------------54DA3C953D9A
Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

FOR SALE: Wilson Mark IV VHF Handheld Transceiver ($35 + shipping)

This is an older VHF (2 meter) ham radio (see attached picture below).
Would make an excellent portable backup, emergency or packet radio. The
radio is in working condition, however, I do not have the antenna,
charger or owner's manual. It features:

+ 6 channels (crystal controlled -- see frequencies below)
+ Tone squelch decode
+ DTMF keypad (touch tone dialer)
+ HI/LO power switch
+ External Mic/Speaker
+ 11v, 500ma NICAD battery (last replaced 9/14/91)

Crytals included: 146.520, 146.670, 147.285, 147.165, 146.625 and
147.060 MHz

$35 plus shipping

If you're interested, please send e-mail to gabrown@bellsouth.net

From: Eric Trowbridge <jbart@bigsky.net>
Subject: GO CODE !!! GO CODE !!!

I am so happy that code is a requirement for the best portions of the
Amateur radio spectrum that I wish that there would be more testing that
required code. GO CODE, GO CODE Onward and most of all upward learn it
or stay on the frequencies that are more appropriate for you so that you
can't propagate bad and poorly referenced information about code.
Fortunately anyone that has done the code and is on the H.F. frequencies
never complains about learning it, they may not use it but they don't
complain. Notice the people who complain about it have to do it on the
internet because the frequencies that they use won't get the job done
otherwise, as for their belly-aching and complaining mentality so what,
learn code or stay off H.F. simple isn't it. GO CODE !!! GO CODE !!!

Eric KC7YGH
Code knowledge and proud of it!!!

From: moler@battelle.org
Subject: Opinions of TS-680

I'm considering purchase of a Kenwood TS-680S. This is a general coverage
HF transceiver and covers 160m-6m. It is the twin to the Kenwood TS-140S

which doesn't cover 6m.

I have seen the review done in QST in Oct 1988, but I'd like anyone who has any experience with this rig to give me some additional feedback on it's performance and user satisfaction. Thanks in advance.

Subject: Seeking: 2-Meter and 440Mhz HT

If any one can offer me a Handheld Ham Radio that works at 2-Meters or 440-Mhz, I prefer a Radio Shack but all solid equipment is good.
I'm also looking for a set of Ham Radios that work at 1300-Mhz, for Data Packet.

Thanks, E-Mail me if you have any information or suggestions.

Most large electrical supply houses will carry them. The one I like is made
by Delta Arrestors of Big Spring Texas. Cheap and effective. But there are
others.

From: pwserctr@aol.com (PWSerCtr)
Subject: FS: Director II pagers

Now in stock over 1,000 used voice pagers. Minitor II, Director II, and
Keynote. All pagers are completely checked out, the housings are cleaned, and
come with a 90 day warranty. Most bands are available VHF, UHF, and 900 MHz.
The pagers can be crystallized to your RF freq and set up on your paging
tones.

Also available - boards, parts, housings, chargers and new batteries

Check out the new LOWER PRICES available on selected models.

The price varies depending on the pager and options requested. Please go to
our
web site, it lists all the prices and options.

We also take trade in pagers working or not: Minitor II, Director II, and Keynote

Bill (N5WRX) -

Some guys on the net (the price police for example) are willing to
look at a price thats posted, and then make assumptions about it's
fairness, with *no* knowlege whatsoever about the specific items
that is being sold. They feel justified in commenting in some very
negative terms about something they truly don't know about.

I don't always get my parts in nice, matched sets. In this
example, $15 is what I had to pay for that manual, separate from
the R4B, and, I had to look for it for weeks. The fellow that I
bought it from answered and inquiry from me about something else,
and wasn't even planning on selling it until I asked.

Sooooo, as a *courtesy* to the fellow that buys my R4B, I offer
the matching manual with the rig, which, I'm am also selling at my
cost, it is just that nice. I would personally prefer to keep the
manual for myself, but I figure that a guy that gets a shiney new

R4B will enjoy the experience even more with an
pristine manual. Bill, if you saw them you'd know, the fellow that
bought these two items for $215 will be a friend for life...

I will send you the mod ONLY IF YOU PROMIS TO post to the Usergroup.
I am willing to also post the elusive IC-756 MOD. I finally found them on a
Hard Drive
that had problems. I can't posibly send them to every Ham so I ask that
they be published.

No, it is Class C biased and will not do SSB as it normally is wired..
IF you wired a bias ckt to the base of the xstr, it would do Class B or
AB and work on SSB...but if you dont know how to do it, get someone
who DOES....you CAN and WILL blow the xstr up if you dont set the bias
correctly!

Hello All;
I am selling 5ft Glen Martin Roof Tower w/ matching thrust bearing
and 9ft heavy duty aircraft aluminum 2" diameter mast. All in great
shape almost like new. Email: n2rif@amsat.org You can try calling

but my phone is usually busy cause Im on the net most of the time.
My ph# is 609-386-9382..
New it cost over $400 for everything. I am asking $290 OBO. It is
assembled. Shipping will probably be a bit hard to re-package. So
anyone who is within driving distance should probably re: My qth
is Burlington, NJ about 5 miles NorthEast of Phila,Pa and 12 miles
South of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Subject: FT-847 (again!)

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio
to be available in the USA in Mid February 1998. I don't think it has
aremote faceplate
or built in tuner. There is an optional "FC-20" tuner that will sit next
to the radio. No price
but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.
There are two optional Collins Mechanical filters in the second 45 KHZ
IF. One is
2.75 KHZ and the other one is 500 HZ. It appears this radio has the same
IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736
Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847
has some stuff specifically for satalite work (alpha Tagging)?
The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.
The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION and
has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746 has
a built in

AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this scope

operates faster but has less resolution. Also, the IC-746 has TWIN
PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF
and then "SLOPE DSP
Tuning " in the ausio section.

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio

to be available in the USA in Mid February 1998. I don't think
it has aremote faceplate

or built in tuner. There is an optional "FC-20" tuner that will sit
next to the radio. No price

but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.

There are two optional Collins Mechanical filters in the second 45
KHZ IF. One is

2.75 KHZ and the other one is 500 HZ. It appears this radio has the
same IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736

Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847

has some stuff specifically for satalite work (alpha Tagging)?

The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.

The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION
and

has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746
has a built in

AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this
scope

operates faster but has less resolution. Also, the IC-746 has TWIN PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF and then "SLOPE DSP

Tuning " in the ausio section.

Subject: HELP!! I need some advice on my first radio (HT) purchase!

KB4UTZ@yahoo.com wrote:

>I need some help from those of you with handy-talkie (HT) experience.

>I just passed my Tech Plus exam and am now in the process of choosing my
>first radio. I enjoy hiking, camping, and backpacking so I am currently
>leaning toward getting a dual 2m/70cm HT rig as opposed to a mobile rig. I
>do plan on listening/using the radio during my daily commute of about 25
>miles into metro Atlanta (Georgia) also though.

Kirby,

You will "sooner" than "later" acquire both a HT and a mobile because
both have their advantages and disadvantages. Nothing wrong with
picking up the HT first. Since you mentioned you like hiking (far
away from a repeater?) , I would steer or lean toward a radio that has
the potential of putting out 5+ watts. This narrows down the field.
At 5 watts, then I would see which radio has or can get the larger
battery so you have more air time. No fun having a radio with 2-4

hours of battery life between recharges and be on a hike and run out of juice. This again narrows the choices.. Plan on getting an optional antenna cause the rubber duck antenna will work fine in cities but the further away you get, the worse the performance till nothing.. Do you have adequate 70cm repeaters in your area to warrent the dual bander? If not, you can save a bundle of money that could go toward the mobile, by buying a single band radio.. Buy a single band radio(s) now and expand into the 70cm band later?

>My specific questions are:

>1. What radio would you recommend for a 2m/70cm beginner like me? Mobile
>or handheld? Why?

See my statement above. You will eventually get both. We were all beginners at one time. I would suggest joining a Ham club in your area and asking the members for their opinion and experiences and they would be glad to show you their radios up close and in person and tell you all the pros-cons of each...

>2. Depending upon the answer to #1, what radio(s) would you recommend and
>why?

Icom, Yaseu, Kenwood, Allinco all make good radios, both HT's and mobiles... Hummmm, not much help am I?? I have a mixture of all four brands if that tells you anything, and each one does something a little better than the others, but none are bad.

>3. As I stated before, I am leaning toward a handheld... in particular
>possibly either the Yaesu FT-50RD or the Kenwood TH-G71A since they both
>have the MIL-STD 810 rating. Would either of these two radios be a good
>choice? Would one be preferable over the other? Why? What are the pros
>and cons of each radio? Or... should I forget these two radios and
>consider something else altogether?

Good choices. I have not owned either, but have heard good things about both... Like I mentioned above, if you are hiking far away from repeaters, I would want a radio that puts out 5+ watts and have a relatively large battery capacity, with a telescoping antenna... Do these models have that ability??? Check the catelogs.

>4. Are there certain radio manufacturers that I should stick with (or
>conversely avoid) in consideration of radio quality, frequency of repairs
>needed, etc.?

Icom, Yaseu, Kenwood, Allinco all make good radios.

>Thank you in advance for any assistance you can provide.

Subject: Newbie Question / Mini receiver

Hello,

I_m a complete beginer to shortwave, but I did like to buy a very
small receiver for traveling.

I want to use it, to be informed in remote places and countrys where
you can_t rely on public avaible informations.

I could get a Sony ICF-SW 1E, which has the size i would like, but is
it a good shortwave receiver?

Are there alternatives to this receiver?

Richard

Hi,
I am looking for a heavy old nonwoking radio for my Son to play with!
Must be clean and safe: Knobs need to have set screws holding them on to
prevent removing and swallowing. He is only 21 months but loves to play
with my
working stuff.
I posted in boatanchor group first.
Thanks,
Jack

if you goto your local radio shack you can still get the service manual
for it. wich has the standard user manual in it.

Subject: 2-meter transciever question

One of the best buys is the Alinco DR 140T. It is a bare bones transceiver
which works well. Kenwood is also marketing one for around $250 as is ICOM
with their IC-2000.

From: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Subject: 17.9 MHz IF?

Just opened up the case of a Motorola HT, operating on 138.960 MHz.
The rcv crystal is marked 52286.66 (=52.28666 MHz). It's third multiple
lands at ~156.86 MHz. This implies the rcvr's IF is 17.9 MHz. Is this
a common IF for Mot VHF-high band gear?

Will this radio be easy to recrystal for 146 MHz?

(The transmit crystal is marked 46.320 MHz; the frequencies of these
crystals are not fundamental, correct?)

Thanks in advance!
Jeff KH2PZ

Gary, I guess you didn't comprehend the basic message in my unofficial
communique. I'll reiterate, don't give them any ideas or ammunition in
they're quest for the domination of the worlds communications.
Bill Gates likes to play monopoly not as a board game, but as a global
game.

Isn't just amazing how much range one can get out of a radio when it's
antenna is at 10 or 20 Thousand Feet, even with just a few watts.

Procomm, Procomm Plus, Telex, QModem, or ANY other Terminal program will
get the job done. However... you may be required to tell the program
just what COM port and IRQ the TNC is on. The same advice holds true
for PaKet, TPK, WinPack, Sally, etc. The ONLY terminal program that I've
seen that was really fussy was Kantronic's Kanterm that comes packaged
with their TNC's. Wants to see COM 1 or COM 2 only.

Ed,

Please check out this page :

http://www.yaesu.com/ft847.html

And let us know if you still believe it's an '846.

73,

Mark

N4EOC

Germantown, MD

P.S.

Could there be 2 new rigs coming out? The '847 is the only
one discussed on the Yaesu site...

I had the same problem. Was a bad plated through hole on the bias
board. Easy fix. The board is the oone next to the final cage. Pull
the tubes and check the bias voltage. You will find it on one side of
the board and not the other.

Later.

Subject: Help request for ICOM IC-T7a modes

I have problem with my radio, I can not to reach DTMF speed.
My speed is from 500 - 100 ms, but I need speed at least 50 Ms.
If you have solution for my problem send me on E-mail nedelja@eunet.yu,
or on news. Also if you have some other modification I will be
grateful for every information. I can send this one:

Subject: RE: Icom IC-T7A Mods?
In article 05101dcc@gfiber.halcyon.com, Gary P. Fiber
writes:
Hold the Moni and band buttons while powering up the radio, wiat for at
least 5 seconds before you release these buttons. Then press the band
button and see what happens. You will be pleased.
Gary
It has also been said that if you remove D15 on the logic board that
tx at 420 is possible

From: Phil Wheeler
Subject: QRP rig OHR100 vs. Norcal 40a

Daniel,

I've built the NC-40A and the Sierra, as well as an OHR-400.

A big plus of the OHR I built was that the torroids came pre-wound; the
NorCal radios required me to wind the torroids (over 40 for the Sierra).

The OHR-100 may be easier for you to build, tho the NC-40A will likely
draw less power and be lighter (nice for backpacking!).

OHR-100 may also give you better freq coverage; dunno personally, since
I have not read the OHR-100 specs.

Both Wilderness Radio (NC-40A) and Oak Hills Radio (OHR) are very good
to deal with.

Phil

From: Arne Nilsson <sm6vr.arne@mailbox.swipnet.se>
Subject: IC706

I would like to connect my home made antenna tuner to the IC706 and get
it working via the "tuner/call" button. Does anyone know the
specifications for the Accessory connector or the connector for AH-3?
How does the IC706 detect that a tuner is connected?
The manual is not very useful.

There are preamp projects in The Satellite Experimenter's Handbook, The Proceedings of the Central States VHF Society, and The VHF/UHF Dx Book, among other places. There are also suitable designs in *older* ARRL Handbooks. There was recently a MMIC preamp in QST, but that won't have a low enough noise figure to improve on an ordinary receiver at 70 cm. A few suitable preamps
have appeared in QEX. You really want a GASFET design. Far Circuits offers circuit boards for some of these preamp projects.

There are a number of companies which sell preamps. SSB Electronics and Advanced Receiver Research are well known, and make good ones. Expect to pay from $80 to nearly $200 for these, however. One of the few Hamtronics kits worth buying is their helically filtered 70 cm preamp. This is a good unit,
and fairly cheap too. Forget the Ramsey junk.

On 5 Dec 1997 04:27:41 GMT, kn6epsac@aol.com (KN6EPSac) wrote:

>Been curious about this for a long time. WHY is all aircraft Tx AM and not
FM?

It is primarily just a historical artifact. Back when they started putting
radios in airplanes, AM was the dominant voice mode, so the radios
were AM. Inertia, and a very large installed base, has kept it that way.
AM is generally "good enough" for air to ground communications, and
it does fit in a somewhat smaller amount of spectrum than FM.

There are a couple of other incidental benefits as well. The constant
AM carrier makes DFing fairly easy. And there is no FM capture
effect, so doubling is detectable, and often one can copy both signals
rather than just the stronger one. This has a safety benefit. AC could
switch to SSB, and they have for long HF circuits, but that loses the
ability to DF the signals easily because of the lack of a constant
carrier.

Replacing 570S Battery

Go to your local battery supplier and get a CR2032 Lithium Battery. RS
and most drug stores carry them.

Do the following in exact order.
1. Remove the top and bottom covers.
2. Remove the two brass-colored screws at each side of the top side
brackets holding the front panel to the main chassis. Loosen the two
brass-colored screws at the side bottom brackets (with a slot on each
side) holding the front panel.
3. Hook up the power supply to the radio and turn on the power supply.
4. Turn on the radio and then turn it off (leave the power supply on)
5. Slide the front panel forward and tilt it down and the battery can be
seen in it's holder---most likely a black plastic holder. Replace the
battery.
6. Turn on the radio and turn it off.
7. Replace screws and covers and you're back in business.

Subject: lightning strike detection

Does anyone know of a system for detecting lightning strikes within a
pre-defined area which displays the results as a 3D image on a computer?
There used to be a company in Texas that supplied such a kit in the
early 1980's. It involved placing 4 RX masts around a town and combining
the info from all 4 to generate a 3D map.
Any suggestions?

David Shenton.

Some FACTORY.TPL will not be usefull to you, you will probably
not be able to upload it (who knows what mod you are in)

> p.s. Yes, I did turn the squelch off when trying to upload.
> No hardware mods have been done.
>
> Any help would be appreciated.
>
> Larry
> N1ZGI

Do as follows:

Find e HEX editor.

1. Start the FT50 Programmer and save this as BLANK.RDF
(Start and save (BLANK.RDF is a empty .RDF))
2. Make a Template from your FT50, name it MY.TPL
3. Read from the MY.TPL the bytes on adress 05E2 and 05E3
(let's call them value1 and value2)
4. Edit the BLANK.TPL and set the byte on adress 05E2 to be
value1 and the byte on adress 05E3 to be value2
Change the first 3 letters in BLANK.RDF from RDF to TPL
5. Rename BLANK.RDF to BLANK.TPL
6. Upload the BLANK.TPL to the FT50

Everything will be normal now.

Don't play with the "Pull the cable out method"

Read the following info:

Content-Disposition: inline; filename="Ft50mods.txt"

FT50R - Software Modifications
Ingra-Beton@t-online.de, Date: 31.03.97
==========
This is modification of the first version, with same fix up's, typing
error corrections and better explanations (one Example too).

The Problem:

I have purchased a FT50R a couple of days ago and tried to make the MOD's
as described by Bill Childers (KE6VVW).

The removal of the solder jumper Nr.1 worked just fine and the
MARS/CAP was there. But as I tried to make the Trick to pull the
adapter cable out of the radio, ..., that don't work.

RT Systems says:
> The firmware inside the radio has been changed so that pulling the plug
> will not toggle the radio into a European mode. This change was made in
> radios with the 3rd and 4th digits of the serial number greater the 05.
> --
> Rod, RT Systems Amateur Radio Supply, Huntsville AL.
> Sales 1-800-723-6922, Tech 1-205-880-3093

So I had to find something else, here it is.

This is a method to do any MOD to your FT50R. The procedure is very simple
and fast done:

1. You make a template from your FT50R
2. Change 3 Bytes in the template
3. Upload the template to your FT50R

So you can switch to any BAND, you don't have do hardware interventions
or similar staff like pull the adapter cable out, ...

If you want do return the FT50R to its original state, just upload the
old (unmodified) .TPL to the Unit.

Information and explanations:

All MOD's can be made by software only. To do the MOD's you need the
ADMS 1C Software (I am using the 1.05 Version) and a HEX editor to
manipulate the .TPL file (I am working with .TPL file's only)
I am using HIEW 5.24 (Hacker's View) but any HEX editor will do the
job (PCT, Norton, Multiedit, ...)

Everyone has noticed the problem after making same MOD's to the Unit
that the old .TPL files can not be uploaded to the Unit any more.
There is a simple protection scheme (2 bytes) that prevents uploading
a .TPL file from a different hardware configuration to the Unit.

This is a description how to bypass this protection. By uploading a
.TPL file with different hardware configuration, (from a other Unit
or just to change the 2 bytes) the Unit will be assigned to this new
configuration.

First a description of Terms and Positions:

1. Current_Byte
....
This is the Byte that tells the current Status (Hardware configuration) of
the Rig, you can get this Byte as follows:
- Make a .TPL file from the Rig.(Menu: <Radio> <Create template>)
- Edit the .TPL File with e HEX Editor.
v this is the first byte*
- On the File Address 05E2 is the sequence 07 XX
^ Current_Byte (Addr.:05E3)
- The Current_byte can be in the Range from 00 to 06.
- *the first byte is usually 07, by experimenting with nonstandard Numbers
you can change this byte also. (03 or same other value, but very rare)

2. Key_Byte (Security Key)
....
The Key_Byte is at the same place as the Current_Byte, but in the .TPL
file you intend to upload.
If you want to upload a .TPL File to the Rig, the Key_Byte must match the
Current_Byte (that means that the Hardware configuration of the Unit and
the .TPL file you intend to upload must be the same). Just change with the
HEX Editor the Key_Byte of the .TPL file you intend to upload to be the
Current_Byte and you can upload anything (any .TPL file) to the Rig.
!!! No more CERR Messages !!!
(As mentioned in 1. if you change the first byte, you have to change this)
(byte also (in the .TPL File you intend to upload) to be the same Byte as)
(in the Template you have just made to read the Current_Byte.)

3. Band-Set_Byte
.....
- Edit the .TPL file you intend to upload with e HEX Editor
v* v Sub_Band-Set_Byte (Addr.:0CE8)
- On Address 0CE6 is the Sequence 07 XX XX
^ Band-Set_Byte (Addr.:0CE7)
This Byte tells the Rig to switch to Band XX (XX is a Nr.between 00 and 06)
To change the Band simply change the Band-Set_Byte to the desired Number.
After Uploading the Modified .TPL File to the Rig, it switches to the
desired Band and the Current_Byte becomes the Band-Set_Byte. That means if
you want to upload later something else to the Rig, you have to change in
the .TPL File you intend to upload the Key_Byte to the new Current_Byte
(with the HEX Editor).
The Sub_Band-Set_Byte tells the Rig in with Sub Band to switch (see Table)
*The byte (0CE6) is usually 07, rare 03 or same other number.

Example
.....
Now, to do a band change do as follows:
- let's assume you have BAND_A1 (USA) and want to switch to BAND_F3
- make a .TPL file from your unit (let's assume original.tpl)
- copy the original.tpl to mod1.tpl (this file we are going to upload)
- read the Current_Byte from original.tpl (as described in 1)
(for the BAND_A1 we assumed you have it will be 01))
- set the Key_Byte in mod1.tpl to be the Current_Byte (01) (as described
in 2). It is logical that the Key_Byte will already be 01, you've just
made the copy, but it is a matter of principle, keep reading.
- set the Band-Set_Byte in the mod1.tpl to 00 (for the BAND_F)
- set the Sub_Band-Set_Byte in the mod1.tpl to 03 (for the Sub BAND F3)
- upload the mod1.tpl to the unit.
- power off, power on, now you have BAND_F3, DONE.

- let's assume you want to switch now to BAND_B2a
- make a .TPL file from you unit (let's assume temp.tpl)
- read the Current_Byte from temp.tpl, it will be 00. (BAND_F)
- copy the original.tpl to mod2.tpl
- set the Key_Byte in the mod2.tpl to be the Current_Byte (00)
- set the Band-Set_Byte in the mod2.tpl to 02 (BAND_B)
- set the Sub_Band-Set_Byte in the mod2.tpl to 01 (Sub BAND B2a)
- upload the mod2.tpl to the unit.?
- power off, power on, now you have BAND_B2a, DONE.

and so on ...

Here are the MOD's (Band's) available:

I 00 01 02 03 I <- Sub_Band-Set_Byte (Address 0CE8)
---
00 I F1 F2a F2b F3 I
01 I A1 A2a A2b A3 I
02 I B1 B2a B2b B3 I
03 I C1 C2a C2b C3 I

```
04 I D1 D2a D2b D3 I
05 I H1 H2a H2b H3 I
06 I FrEE FrEE FrEE FrEE I
-------------------------
^ Band-Set_Byte (Address 0CE7)
```

When you set the Rig in a band (with the Band-Set_Byte) then you can switch from Sub Band X1 to X3 (if solder jumper 1 removed) with the key sequence:
- Hold Lamp and Knob by powering_on to switch to X3 Subband
- Hold Lamp and Knob by powering_on (you will see ALRST prS5) and then press the function key to switch to X1 Subband

The TX for the X3 Bands is:

```
BAND SUB_Band TX
F 3 120-222 320-500
A 3 140-174 420-470
B 3 140-174 420-470
C 3 140-174 420-470
D 3 144-146 432-438
H 3 144-148 430-450
FrEE 50-300 300-540*
```

*It will TX from aprox. 118-233 and 312-508
RX from aprox.71-540 and 600-999 depending from the Unit.

The Sub Bands 1,2a and 2b are with restriction variations in TX and RX and I am to tiered to examine them closely and write them down. I guess that they are not very interesting.

ARS lost - effect

The FT50R has e BAND_PLAN like database and depending for witch country your unit is configured (A,B,C,D & H) it is using the repeater database? from his Memory for that country.

It is understandable that for the BAND_FrEE and BAND_F (TX:120-221&320-499) there is no data in the database because those band's are not for any specific country. That is why the ARS does not work any more, and not? same mess up (magic) in the memory of the unit.

That does not mean that it is not possible to enter additional data to the ARS memory database (I am working on it).

If you want to use the ARS again you just have to switch it into any ordinary country BAND_X and it will work again.

Original .TPL file

If you don't have a original .TPL file, you can make (improvise) one:
1. Start the ADMS 1C software
2. Goto the File Menu and save a .RDF file as original.rdf
(don't download anything from the Unit, don't use a template)

3. Change with a HEX editor the first 3 bytes from RDF to TPL
4. Set the Key_Byte in this file to be the Current_Byte of your Unit
5. Rename the original.rdf to original.tpl
6. Start the ADMS 1C and upload the original.tpl to the Unit.

This will switch your unit to BAND A1 (USA), ARS will work again !

Disclaimer:

Don't TX and RX at frequencies that you are not allowed to!
I do not guarantee the validity of this information,
as Yaesu may change programming or hardware so that some of the
techniques in this document may cease to function. I am not
responsible if these instructions damage your rig in some way. All
I can say is that I have performed the following procedures to my
unit, and I am quite pleased with the results. Your mileage may
vary, etc.

From: sca00135@mail.wvnet.EDU (Sam Hall)
Subject: Kachina comments

It seems like there is quite a bit of interest in the Kachina 505 with requests for information. I have operated the 505 for a couple months and offer the following as my initial impressions. I have been somewhat hesitant reporting on the 505 as I don't want to mislead anyone about the rig. Please accept the following for what it is and nothing more. Remember, one man's trash is another man's treasure, what I like or dislike may be totally different from another perspective. I bought the 505 primarily to remote control at a site 7 miles from my home. I am told the telephone modem will be available after the first of 1998 and can't wait to operate the 505 remotely.

First, the caveats, I am not an engineer, I have not used any sophisticated test equipment (only my eyes and ears) , my total operation time amounts to about 10 hours involving DX, casual contesting and rag chew. I operate about 90% CW and 10% SSB. When possible I tried to compare the 505 with a 1000MP sitting side by side in an A/B configuration.

Generally, the 505 is not Dick Tracy's wrist TV, what it is a very good HF Transceiver. The look, feel and operation is "different", not necessarily better or worse than top of the line YaWoodCom's, but subjectively different.

I can not hear any difference in the receiver sensitivity between the 505 and the 1000MP. The filters in the 505, ranging from 100 Hz to 3.5 KC are very effective and seem to be truly "brick wall" effective. The 505 filters are definitely better than the 1000MP. Off frequency interference heard on the 1000MP is totally eliminated with the 505. Also, the narrow settings (100 and 200 Hz) seem to produce less "ringing" in the 505.

The variable AGC speed capability in the 505 is great. I had no idea what a difference AGC speed made on received signals and receive fatigue. I find myself often adjusting the AGC for given band conditions. Very good feature in the 505.

The DSP is a mixed bag. Describing the DSP operation is quite difficult. First, it is very effective in reducing noise levels. However, when engaged it makes the receive audio somewhat "strange" and difficult to understand weak SSB signals. The more I listen to it the better I can understand the SSB audio. Stronger SSB signals are much easier to listen to and understand. The DSP is wonderful for CW. There seems to be very little, if any, effect on the sound of a CW signal while considerably reducing the noise levels. There is a variable "Noise Reduction Level", but I can't tell much difference in the minimum and maximum settings. There does seem to be a correlation between the "Noise Reduction Level" and the AGC speed. I need to play with this combination a little more before I

can form any opinion. Overall, I find the DSP very useful for SSB and outstanding for CW.

On the subject of noise, the 505 does not have a "Noise Blanker" as most other HF rigs have these days. Living in a high power line noise field, a "Noise Blanker" is critical for my operation. The lack of this feature in the 505 is definitely a minus for the rig. Also, I don't believe the notch filter in the 505 is as effective as the 1000MP. The 1000MP notch filter is not the best out there for my taste so the 505 is definitely lacking in that department. The DSP does lessen he power line noise, with the side effects stated.

One entirely subjective comparison between the 505 and the 1000MP is the overall receive audio. The general noise audio in the 505 sounds higher pitched and raspy to me, while the same noise level in the 1000MP sounds more "mellow" . For me, this results in the 1000MP being a little easier to listen to, especially in high noise and weak signal conditions. The "edge" is taken off the 505 by moving the IF shift -200Hz.. Probably shouldn't even comment on this point because it is entirely subjective and perhaps without merit.

The transmitter seems to be as advertised. I find my best audio reports are with the "Tx Eq" at the maximum bass setting with a Heil microphone. I haven't used the rig for SSB enough to comment, other than to say I have not had any negative audio reports.

The CW "Dynamics" adjustment is a very nice feature. I understand that the adjustment actually varies the CW waveform from soft to hard. CW ops will appreciate this feature. Also, the sidetone is activated by pressing the spacebar with the sidetone volume easily adjusted by keystroke or mouse. Much easier to spot the receiver on frequency than the 1000MP. The numerous other TX features of the 505 are all as advertised and don't need my impressions. The built in tuner is very fast and seems to work fine. The Smith Chart antenna impedance data seems to work fine and is a feature I really like. Another feature I particularly enjoy is the "Band Sweep" display. Performs as advertised and is useful for quickly looking at band activity especially for 10 and 15 meters.

The control software is very, very good. I have used various CAT programs to control the 1000MP and other HF rigs with some programs being better than others. It is obvious the 505 software developers have spend a lot of time making the software intuitive and easy to use. I generally prefer keyboard control rather than mouse control. The keystrokes required to control the rig are minimal and quickly learned. Mouse control is point and click (and sometimes slide). The primary operating controls are accessible directly form the operating screen. Some lesser used controls are accessed only from drop down menus therefore requiring an extra keystroke or mouse click. I prefer every control being accessible directly from the operating screen and hope future software revisions provide for this. One point that deserves mentioning is the operation of the 505 is different than what you are used to with conventional radios. It took me several hours of operation to get the "feel" for using a keyboard to

control a HF transceiver. Didn't really like it much at first (having used dials, knobs and switches for 35 years) but have now grown used to it and find in many respects it is easier to operate than the 1000MP. However, there is a certain primal quality to having the rig with it's knobs in front of you on the operating bench. Also, remember that you will have to have a computer monitor running at all times and if your monitor is like mine, it is RFI dirty. I find this a real problem and am in the process of trying everything I can to clear up some of the interference. There is an extension cable available for the 505 which would allow separation of the radio from the computer which may be one possible fix for monitor noise but I prefer to have the computer and rig together. If anyone has any advice as to a brand of monitor that is RFI free, I would really appreciate the information.

This has gone much longer than I had planned. Hope I have answered some questions. Overall, I find the 505 an excellent HF Transceiver with the exception of the notch filter, lack of noise blanker and pitch/tone (for lack of a better description) of general band noise. Many features of the 505 I like better than the 1000MP. The major pluses are the Band Pass Filters, DSP for CW operation, adjustable AGC, CW adjustments, Band Sweep, Smith Chart impedance data, American made with customer support that is truly exceptional, but that is another story.

I would be happy to answer any questions anyone might have and if you want to stop by my QTH in southern West Virginia for a hands on demonstration just drop me an EMail. 73's, Sam--K8WVA--

>
>Mike, N4PDY

Mike,

the AVC only works on AM, not CW or SSB. Had a 110 for over four years
and no one could get that to work. I recall something in the fine
print on the manual. The '110 does not use a product detector like
upper grade radios do... therefore the AVC is prone to overload from
BFO leakage. I have an HQ-180 and it works fine in that one.

From: Ron Castro
Subject: FT-50R ARS Probs Fix!

Like many who hardware-modified their Yeasu FT-50R's for MARS/CAP xmit, I noticed that my Automatic Repeater Shift (ARS) function had defaulted to the European band plan, rendering it useless for US repeater operations. I use the ADMS 1C programmer (v 1.04), but neglected to save a template of the origional USA configuration. Even if I had, I understand that making the hardware mod makes the file unusable.

Good news! Despite reports that the ARS function is "hosed" after the mod, it CAN be restored! To find out how, check out the FT-50R homepage at:
www.members.aol.com/aeimn/ft50/articles.txt
Look near the end for the Ingra-Beton article. The article shows how to use a hex-editor to change the .TPL file (although it works on .RDF files as well) to restore the functions, while retaining MARS/CAP xmit capability. I found that only ONE BYTE needed to be changed in my file to fix the problem, and although I have never edited a hex file before, it worked right away! Any hex editor can be used...I used XTREE Gold, but there are dozens of others out there, including the unfreindly DOS debug. Please read the disclaimers in the article.

One tip...read the article VERY carefully, make sure you FULLY understand it before proceeding, and if you are squemish about hex editing, talk to someone who knows about it to make sure you find the right addresses in your file the article refers to. Save a file that you know works with your radio as a back-up!

Three cheers for "Indi" for solving a problem that has stumped FT-50R users for a long time!

>
> (Many of our "open" repeaters use CTCSS for these reasons, and not just as a way to control access. Locally, most of us have agreed to use a common 100 Hz CTCSS tone on open machines. This means that even for those whose radios don't come equipped with CTCSS encoders and decoders, the simplest and cheapest retrofit kits can be used.)
>
> I've operated my machine with an OR system for a number of years.
> That allows stations without CTCSS capability to still access the machine via direct carrier access if their signals are strong enough (I set carrier squelch very tight), or use CTCSS and operate under more marginal conditions. CTCSS is transmitted on the repeater output at all times.
> This has worked very well.
>
> I understand that UK regulations are somewhat different from ours, but a system which ORed tone burst and CTCSS could give you most of the benefits we enjoy. (And most rigs have a monitor button which lets you open squelch to listen before transmitting even if CTCSS decode is operating, so that should satisfy your requirements too.)
>
> Gary
> Gary Coffman KE4ZV | You make it |mail to ke4zv@bellsouth.net
> 534 Shannon Way | We break it |
> Lawrenceville, GA | Guaranteed |
>

Hi Gary,
I agree with all your comments. On our local repeater, I was one of the people who very much wanted CTCSS to be retrofitted to the unit, so became involved in making it happen.

We are required, on 2m. repeaters, by our licence to have 1750Hz access. However, we can have CTCSS also. We have OR'd the two access modes, as you have mentioned and this gives all users an opportunity to access. CTCSS is far better, as in our application, the decoder module has a much smaller bandwidth than that required for use with 1750Hz (+/-25Hz over here for 1750) and thus an improved signal to noise ratio for detecting the access tone.
When CTCSS is detected, the squelch on the repeater is effectively off and mobile signals will 'swish' up and down rather then chop out and in with mobile flutter. The same applies in reverse on the amateurs rx.

The repeater does not generate CTCSS when giving its identification in beacon mode. Therefore with a decoder on the amateurs rx, they do not have to listen to the beacon. They only hear the repeater when someone access' it.

I appreciate that you will understand this, but these are the enhancements I was meaning in my first reply, that the average user see's as No Value Add. They need to be convinced (not me Yves). In UK terms they ARE enhancements, but until people have seen/heard the benefits of CTCSS it is very hard to get them to understand the benefits.

Alan G.

From: tenorman@i1.net (Mike Kraml)
Subject: What is the deal - Kachina 505DSP? Junk or what???

This is really kind of funny. I performed a search of all the archived news postings from this group on the Kachina 505, and of the 30 or so postings, 90%

of them where from folks begging for a review. I saw guys claim to have purchased 505's, offer side by side comparisons between the 505 and a FT1000MP

for instance, but they never produce crap. What gives? Is this rig such a piece of crap that no one want to discuss it, or better yet, compare it to anything? I've never seen a subject so avoided in my life. What gives Kachina owners? Don't want to discuss it? Waste of money? Greatest rig ever

made? Quiet, noisy, hard to use, easy to use, IF DSP suck, kicks butt, what? Blows the 1000MP away, can't touch the 870, makes the 756 look like a toy, can't even touch the audio dsp of the 920, what???????? Sorry to rant and rave, but I have 2k burning a hole in my back pocket, want to buy a new HF rig, but just can't decide, and certianly don't want to rule out a potential killer rig like the Kachina 505DSP! Thanks for listening, 73, Mike... WQ0N

It sure is a very bad place to post your article, and you know that.
Why would you bother all the readers of this newsgroup with your
off-topic question?

Rob B.

From: Felix
Subject: 847 cost???

QST usually reviews a radio after it is in the market for 4-6 months. I think the reason is to give the manufacturer a chance to correct mistakes. MFj complained that the TNC 1278 go a bad review since it was the first batch off the assembly line(trust me it wouldn't have made a difference if it was 6 months later. Hee hee). If Both the Icom IC-746 and
Yaesu FT-847 come out in February/March 1998 I would expect both to be reviewed
by the Fall of 1998.

Subject: Alinco $88 handhelds

I called last Wednesday and ordered $88 UHF model by phone. It was delivered on Monday, not bad considering no UPS deliveries on Thursday and Friday. Also, the $88 included prepaid shipping. Where can you beat a deal like that?? It is a great little radio, works great keying our 443.450 repeater that is about 12-15 miles away (as long as I am outside the steel roofed office building). Come on guys, give it a break, its an $88 radio.

Subject: FS: Vibroplex Iambic Deluxe paddles, plus matching keyer control
panel

For sale: Vibroplex Iambic Deluxe paddles. All chrome parts and base with red
finger paddles. In mint condition; entirely as new.

Includes an accessory panel for controlling a keyer. This is a small box that
attaches on the side by means of existing screws on the bottom of the paddle;
no modifications. The box has 4 small pushbuttons for controlling various
functions of a keyer; you wire it up as needed. The box is very nicely chromed

and matches the paddle base exactly. The pushbuttons are red, matching the
finger paddles.

I also have a very nice plastic cover for the paddle that I'll include. It has

my callsign neatly engraved in it, so you'll never forget who you bought it
from :-)

$95 shipped UPS anywhere in the lower 48 states. Email if interested. Thanks.

Mike, N4PDY

If you can operate a screwdriver it is fairly easy. The procedure must
be followed exactly though to avoid a repeat of the problem. I will
e-mail it tomorrow when I get to the shop..

To mod the ic 32 for extended receive, just type in F-set until the
screen says PLACE, then set PLACE at 100, and that's it. Your
extended receive will work. try it!

YEASU FT920 TX OUT OF BAND

With the radio off, press[STEP] and [LOCK] (under VFO-A) and hold
these two keys in while you turn the raido on. Now release the two
keys.
Enter the following password: 0761161, then press [ENT].
Press [MENU],Rotate VFO B though the "U" settings till you get to the
"F" Menu (F-01 F-35).

TUNE to "F-35 your Display will say "DESTINA" PRESS ENTER
AND SELECT "OUTSIDE",Using VFO B.that is all there is to it!!!
THIS WILL LET YOU TX 1.8 TO 54MHZ,TO UNDO THE MOD SIMPLY SELECT F-35,
AND PUT IT BACK TO "USA"

The only other adjustments that are of any use is F-09 AM modultation.

After adjustments are made, Press [MENU] to save the new setting and,
exit to normal operation.

WARNING ANY OTHER ADJUSTMENT CAN AND WILL DEGRADE THE RADIO'S
PERFORMANCE.
I CANNOT BE RESPONSABLE FOR YOUR ACTIONS...

I have a GAP Titan mounted at 8' (To allow walking under it without
getting "clotheslined" on the counterpoise). It *does* work and one
could easily earn DXCC with it in a few of months. HOWEVER, my dipoles
hung at 35 feet on 40, 20 & 15m work better. I just don't have room for
4 or 5 more dipoles. :-)

Subject: FS: Hallicrafters "Loudenboomer Mk II a Amp

This amp has been stored for a while but is in real nice (dusty) condition. Said to be in use when the Ham became silent key 6 years ago. Would restore to new and has spare 3-400 Z tube as well as the one in it. $450 .oo firm plus shippping from 79761. Looks sort of like a 30L-1 with power supply in separate case that is a bit larger. Have Dow Key relay box for use with older rigs. I wont say it is working now, but its obvious that it has and nothing is burned or looks bad. Would consider trades for newer amps or HF gear, Im just not a collector and already have an Alpha. Thanks, feel free to inquire about possible trades. Murray

Subject: FT-920 vs FT1000mp

I bought the FT-920 and really like it. Of course I don't do any contesting or anything else very serious. It was a nice upgrade for me from a TS-450. For what I want to do, it is a very nice rig at the right price. I am able to hear and work a lot more dx with the 920, and 6M is a lot of fun when the band is open.

From: k1bqt@aol.com (K1BQT)
Subject: How much power do aircrafts TX?

Hi--

Depends upon the type of aircraft. Small private aircraft use small 12-volt transceivers that put out signals in the 10 watt range. Commercial class aircraft use more expensive radios that run on higher electrical system voltages and put out considerably more power. Control towers generally run low
power because the stations they are talking to are all in the local area and a thousand feet or more up in the air. If you want to hear distant towers clearly, you may need to install a directional antenna with a mast-mount preamp.

Hope that helps.

Finally, the broadcasting industry, their investors and all their supporters in government have figured out how to force every TV viewer to have a "pay" box attached to every existing TV in the country, if not the world. This marks THE END of free, advertiser paid off-air television as it has existed since the beginning of television broadcasting.

From the first, I never believed that the public would willingly pay the projected cost of HDTV willingly, given the reasonably good quality prevalent in current NTSC broadcasts in most places, and I still believe that. There is just so much you can improve on 'good', and I know I don't see any attractive advantage to HDTV, however 'clear' the picture.

It now becomes clear that the public will indeed have a choice-pay up or don't watch TV at all. No more Advertiser-commercial-paid TV for free.

Now all the push for HDTV over the past few years is explained.
Mr. Hundt was apparently very successfull in his apparent Quest. What remains to be seen is how well the mandated change holds up.

Subject: Impending HDTV....

On Tue, 02 Dec 1997 12:21:22 -0600, K0HB@JUNO.COM wrote:

>I keep waiting for some connection to amateur radio equipment or policy
>in this thread.

TV broadcast is the largest consumer of spectrum below 1 GHz. When
that giant rolls over, all the lesser players have to pay attention. Of
particular interest to amateurs, the final bandplan releases the spectrum
currently assigned to TV channels 2-6 and 63-69. That 72 MHz of freed
spectrum may be able to relax some of the pressures placed on amateur
VHF/UHF allocations by the little LEOs, and others, desiring new spectrum
below 1 GHz.

In addition, the switch from analog NTSC to DTV has considerable
implications with regard to TVI susceptability. That also is of interest
to amateurs. And it isn't all good news because broadcasters will
be sharply reducing power, so over the air TV will become more of
a weak signal mode than it currently is.

Offsetting that somewhat is the more robust nature of the modulation
and coding. But DTV will *not* use the sort of robust FEC which would
make it immune to all types of interference (that would require more
bandwidth for the coding overhead than is available in a 6 MHz channel).
And the 8VSB modulation chosen is also not an ideal choice for operation
in the face of certain types of interference. If DTV is successful in luring
many viewers away from cable, amateurs are bound to face new TVI
challenges.

We may also see the reverse situation, IE DTVs interfering with amateur
equipment. A DTV receiver will be more computer than TV, and we already
know the RFI computers can generate. The sweep rates (and magnitude of
sweep currents) for the large 16:9 HDTV displays will also produce a new
level and type of potential RFI to amateur operations.

So it is a good news, bad news situation for amateurs. We need to be
aware of how we are likely to be affected by these sweeping changes
in the TV broadcast market. And we also have to be aware of who our
new neighbors will be in the newly vacated TV spectrum. There may
be compatiblity issues involved with them too.

And finally, the mass market introduction of a new technology will
have implications with regard to what will be cost effective for amateurs
to adopt and adapt from it for our own uses. High speed RF modem
technology will be sharply impacted by the mass market DTV receiver.
A new generation of fast and cheap RF modems based on DTV
technology could have a major impact on the sorts of operations
amateurs may pursue at VHF/UHF.

Larry, you don't have a good grasp of broadcast economics.

Pay TV is a high risk low return retailing of programming. With
the exception of a few boutique events, it is low margin for the
content deliverer, and has the high overhead of retail sales.
The industry average annual ROI for Pay TV is 3%-6%, and only
about 30% of Pay TV events break even. (Of course there are
a few boutique events which do very well indeed. But there is
no daily market for that.)

Subscription TV has lower risk, higher volume, but still a fairly
low ROI. It is still retailing of programming, but more analogous
to K Mart or Walmart style retailing than is pay per view. Annual
ROI is on the order of 6%-10%, and "churn" still makes cost of
sales fairly burdensome.

But free advertiser supported TV is a horse of a different color.
The industry average annual ROI is 22%. The free broadcaster is
selling a different product than the pay TV delivery agents. He isn't
retailing programming to viewers. Programming is something he
buys as bait to lure in the product that he actually sells. That's the
audience.

The business of the free TV broadcaster is selling an audience
demographic to an advertiser. And advertisers are willing to pay
handsomely for that demographic. In prime time, advertisers pay
(collectively) an average of $32 per viewer per hour. And the
broadcaster incurs very little overhead cost of sales to get that
sort of revenue stream.

There are very few pay TV events which can command $32 an
hour from viewers, and no subscription TV services which can
command that sort of revenue. But it is the routine meat and
potatoes of the "free" broadcaster. He understands this business
very well, and knows where the large revenue streams live.
He isn't foolish enough to throw that away to get a lower ROI
at higher cost and risk by trying to retail programming to viewers.
He leaves that to the niche providers who fight over the fragmented
crumbs outside the mass audience.

I've been doing this for over 30 years, and I know how it works, and
where the money is. It isn't in retailing programming to viewers.
You can be very sure that the programming with the largest popular
appeal will continue to be "free" programming broadcast to anyone
who will tune in. The broadcaster will make sure of that, because
that's where the money is.

No, it is not worldwide. (You didn't think the US and Europe would *really*
agree on a single standard did you? The Not Invented Here syndrome is
way too strong for that.) The US and Europe have settled on totally
incompatible transmission standards, and Japan has settled on one
that takes a bit from each of the others, but is incompatible with both.
It is likely that the rest of the world will adopt one of these three
standards,
but likely a different one of the three on a country by country basis.

>If this is worldwide, it will really help us. We generate most of the
>worlds programming. Lots of Marks, Francs, Pounds coming back here (or
>at least the West Coast). It will also be nice when I am in Germany,
>to use the same set and DSS system as I use here. Digital TV (DTV) to
>me is a blessing.

The world has agreed on a worldwide *production* standard. That's a
different thing from the transmisson standard in the digital era. So
worldwide program distribution will be much easier than in the past.
And as you surmise, this will largely be to the benefit of the current

large program production companies. (Though it does open a niche
for the small producer because he won't be burdened with distributing
different versions of the same programming. Only the major companies
can afford to do that now.)

But you won't be able to take your US transmission standard TV to
Europe and watch European transmission standard broadcasts.
The modulation formats are totally different. (Truth be known, the
European choice has a number of significant advantages over the
US choice. Shades of NTSC versus PAL all over again.)

Once everything is back to baseband bits, the video signals are
the same, so you *may* see more multi-standard sets produced
which will decode the different transmission standards back to a
common baseband. But that's likely to be an extra cost option.

Subject: Programming a Regency RH256B VHF 2-way?????

Hello filks,

I need some assistance with self-programming a Regency RH256B VHF 2-way.
I know that it can be done if one "activates" a jumper. But, there are
two questions: 1 - Where is the jumper? 2 - What are the programming
steps? (I believe that it is similar to programming a scanner, but I have
no idea how to put in the PL Tone frequency.)

I appreciate any, and all, information anyone can give me on this. PLEASE
reply via e-mail (at least cc me via e-mail) as I do not have access to a
news server that carries this group.

Thanks,
Richard

TV sound is 25 kHz deviation, which requires a receiver bandwidth of 55 kHz.
FM broadcast is 75 kHz deviation, which requires a receiver bandwidth of
165 kHz, and is spaced on 200 kHz channel centers to provide some guard
band protection. The FT50 wide-FM mode can handle TV sound, but is too
narrow for FM broadcast. That should make it satisfactory for Wx sat pix.

(whether you are concerned investor/hedger or speculator, this info can change your strategy on the way you do your investments)

The aftermath of regional Asian stock markets, is going to have a much deeply rooted affair with their economic background, as well as their future prospects, expectation of further defaults by banks and companies exposed to Forex & equity e
xposure is on the cards.

Some have connected these problems with major hedge fund aggressive selling of local Asian currencies. The Hong Kong dollar, been the only one not affected as yet, due to excessive monitoring of levels by the HKMA, speculation has now risen
that the next couple of weeks should show the HK dollar its proper level, to some dealers its seen as HK$ 10-15 to the greenbuck (US=1), once its current peg gives way.

Now where does the forces of Chain reaction leaves the other markets no matter whether Equity, Debt, Agricultural, Asian, European, North American, where-so-ever-what-so-ever, When badly affected Asian markets collapse, they send a chill thr
ough major Stock Exchanges around the globe, there has always been
a relatively of connections as for example a company in Europe or USA may be deriving their profits from Asia, selling or buying products & services with Asia. Billion dollar fund management advisers dump stocks on a regional basis, and look
out for warning signs on a global basis, this fact is evident by looking at the 87 crash or this year's 1997 repeat.

Portfolio's are re-positioned for long term prospects, or for the better of risk management, with this complete change of strategy, where does all this big money do to the unexposed Investor, it could either be an great opportunity or disast
er for the uninformed
investor.

There are ways and means whereby an investor can protect his exposure by trading Futures contracts with PHILLIP GNI FUTURES PTE LTD, AND FOR THIS WE HAVE A SPECIAL
REPORT : INTRODUCTION TO THE FINANCIAL MARKETS & TRADING OPPORTUNITIES IN COMMODITY, CURRENCY & FINANCIAL FUTURES. (Available on request)

Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

FOR SALE: Wilson Mark IV VHF Handheld Transceiver ($35 + shipping)

This is an older VHF (2 meter) ham radio (see attached picture below).
Would make an excellent portable backup, emergency or packet radio. The
radio is in working condition, however, I do not have the antenna,
charger or owner's manual. It features:

+ 6 channels (crystal controlled -- see frequencies below)
+ Tone squelch decode
+ DTMF keypad (touch tone dialer)
+ HI/LO power switch
+ External Mic/Speaker
+ 11v, 500ma NICAD battery (last replaced 9/14/91)

Crytals included: 146.520, 146.670, 147.285, 147.165, 146.625 and
147.060 MHz

$35 plus shipping

From: Eric Trowbridge <jbart@bigsky.net>
Subject: GO CODE !!! GO CODE !!!

I am so happy that code is a requirement for the best portions of the
Amateur radio spectrum that I wish that there would be more testing that
required code. GO CODE, GO CODE Onward and most of all upward learn it
or stay on the frequencies that are more appropriate for you so that you
can't propagate bad and poorly referenced information about code.
Fortunately anyone that has done the code and is on the H.F. frequencies
never complains about learning it, they may not use it but they don't
complain. Notice the people who complain about it have to do it on the
internet because the frequencies that they use won't get the job done
otherwise, as for their belly-aching and complaining mentality so what,
learn code or stay off H.F. simple isn't it. GO CODE !!! GO CODE !!!

Eric KC7YGH
Code knowledge and proud of it!!!

From: moler@battelle.org
Subject: Opinions of TS-680

I'm considering purchase of a Kenwood TS-680S. This is a general coverage
HF transceiver and covers 160m-6m. It is the twin to the Kenwood TS-140S
which doesn't cover 6m.

I have seen the review done in QST in Oct 1988, but I'd like anyone who
has any experience with this rig to give me some additional feedback on
it's performance and user satisfaction. Thanks in advance.

Most large electrical supply houses will carry them. The one I like is made
by Delta Arrestors of Big Spring Texas. Cheap and effective. But there are
others.

From: pwserctr@aol.com (PWSerCtr)
Subject: FS: Director II pagers

Now in stock over 1,000 used voice pagers. Minitor II, Director II, and
Keynote. All pagers are completely checked out, the housings are cleaned, and
come with a 90 day warranty. Most bands are available VHF, UHF, and 900 MHz.
The pagers can be crystallized to your RF freq and set up on your paging
tones.

Also available - boards, parts, housings, chargers and new batteries

Check out the new LOWER PRICES available on selected models.

The price varies depending on the pager and options requested. Please go to
our
web site, it lists all the prices and options.

We also take trade in pagers working or not: Minitor II, Director II, and
Keynote

Subject: ssb filters

Hi little fellows.Sorry for bigga' shapes.
well, I'm living in an ex-soviet heavy-splattering area, that means that very often I have to deal with square QRM.
na' getting to the point: I need a piece of 1.8kc ssb filter on 8.83Mc IF stage for the TS440S.I don't mind for one even used or a pair used 1.8kc - 0.5kc used but still OK.Do I have a deal for $100 the pair?
we'll answer to each and every mail but don't exced this price. We'll consider shipping.That was. Over.

Please come on <nicky@profm.ro> nic YO3GNO

Maybe what we need are a number of relatively inexpensive (under $150) kits
for this band.

Richard,

Go ahead and get the Sony if you like it. My past experience with their shortwave radios has been good. I'd much rather see you buy a Sony as opposed to a Sangean unit. I have a Sangean ATS-803A (Realistic DX-440) and it's a very nice radio, but I get interference something horrible from our TV and FM transmitters. I live about 15 miles from the antenna farm in Cedar Hill, Texas....that's really bad......Good Luck with your choice....de Todd KB5TMD.

633. ADI AT-600 vs. Icom IC-W32A

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-06 00:00:00 UTC
From: Cal Kutemeier <ckuter@ix.netcom.com>
Message-ID: <66a8mt$uo@dfw-ixnews9.ix.netcom.com>
Source record: 160024

I am a new ham and would like to hear comments about these two radios. Based on my reviews of their options and capabilities, I am leaning toward the IC-W32A as that radio will receive a broader range of frequencies. I would like to use this in my car and as a base unit with packet capability for a while.

I appreciate any thoughtful comments that you may have.

>ve6ci@telusplanet.net

Hello Don,
The following is a slightly modified version of an article that I posted just last week for a similar request.

I have the TS-450 rather than the TS-850, but I would be very surprised if there were any differences in the 6 pin connector ACC-1.

In fact, the User's Data for the IF-232C, itself, says that it is designed for transceivers capable of computer control, such as the TS-940S and the TS-811/711 series.

I have used the Kenwood IF-232C External Control Interface with it, and it works fine.

Here's the pinout per my data sheets:

1 Signal Ground
2 Transmit Data (Output) (TXD)
3 Receive Data (Input) (RXD)
4 Transmit Enable (Input) (CTS)
5 Receive enable (Output) (RTS)
6 N/C
Note that the meaning of "Transmit" and "Output" refer to signals from the transceiver to the PC.

The data sheet also indicates that whereas the PC's serial port is RS-232C (-12v to + 12v), the Transceiver uses TTL (0 to +5). I guess that explains why it is you can't just connect the two ports directly together - Hi.

One other point of interest. As is the case with almost all RS-232 devices, remember that the connection between the Transceiver and the PC MUST connect Transmit Data to Receive Data and vice versa.

Likewise the CTS/RTS lines are also cross connected. Well, that's consistent, isn't it?

Don't forget which pins are which on the PC side. Depending on whether you have a 9 pin or 25 pin connector, as follows:

Signal 9pin 25pin

TXD 3 2
RXD 2 3
CTS 8 5
RTS 7 4

GND 5 7

I should point out that the IF-232C unit uses a 4 circuit Opto-isolator chip, a power regulator chip, and two chips for line driver/conversion functions. It does a great job with a cable length of 100 feet, so I'm satisfied that it is noise free. I can't remember for sure what software I used but there were two shareware programs that work fine, and I got them from the QRZ CD-ROM.

If there's anything else you need, don't be bashful.

P.S. I have used two different shareware programs with this interface over a 100' cable and it works fine.

73 de Bob, W9DMK

Well Cal, I can't tell you anything about the ADI, except that they're one
of the new
kids on the block. I've owned the Icom W-32A for over a year now, and its
one fine little rig. And, the price is right, around $330, maybe less if
you shop around. Excellent Rx sensitivity, 5 watts of Tx power right out of
the box, a well-lit and easy to read display and keyboard, fast scanning,
plenty of memories. If you're gonna use it in a vehicle, you'll need an
extension speaker or a speaker-mike. I think that's true of all HT's.
Happy Holiday and 73.

Al, W2JUV

menu F-33 not 35 sorry....

YEASU FT920 TX OUT OF BAND

With the radio off, press[STEP] and [LOCK] (under VFO-A) and hold
these two keys in while you turn the raido on. Now release the two
keys.
Enter the following password: 0761161, then press [ENT].
Press [MENU],Rotate VFO B though the "U" settings till you get to the
"F" Menu (F-01 F-35).

TUNE to "F-33 your Display will say "DESTINA" PRESS ENTER
AND SELECT "OUTSIDE",Using VFO B.that is all there is to it!!!
THIS WILL LET YOU TX 1.8 TO 54MHZ,TO UNDO THE MOD SIMPLY SELECT F-33,
AND PUT IT BACK TO "USA"

The only other adjustments that are of any use is F-09 AM modultation.

After adjustments are made, Press [MENU] to save the new setting and,
exit to normal operation.

WARNING ANY OTHER ADJUSTMENT CAN AND WILL DEGRADE THE RADIO'S
PERFORMANCE.
I CANNOT BE RESPONSABLE...

73 COREY
VE1KCO

ps:please email me and let me know how you made out with the mod some
have said that it doesn't work mine works fine my cpu verison is
"F-01" 01.10 and my s/n is 7h050203

Perhaps I am wrong, but I thought this radio ran on (alkaline) AA or AAA
cells?

Subject: FS: Hallicrafters "Loudenboomer Mk II a Amp

This amp has been stored for a while but is in real nice (dusty) condition. Said to be in use when the Ham became silent key 6 years ago. Would restore to new and has spare 3-400 Z tube as well as the one in it. $450 .oo firm plus shippping from 79761. Looks sort of like a 30L-1 with power supply in separate case that is a bit larger. Have Dow Key relay box for use with older rigs. I wont say it is working now, but its obvious that it has and nothing is burned or looks bad. Would consider trades for newer amps or HF gear, Im just not a collector and already have an Alpha. Thanks, feel free to inquire about possible trades. Murray

Subject: FT-920 vs FT1000mp

I bought the FT-920 and really like it. Of course I don't do any contesting or anything else very serious. It was a nice upgrade for me from a TS-450.

For what I want to do, it is a very nice rig at the right price. I am able to hear and work a lot more dx with the 920, and 6M is a lot of fun when the band is open.

From: k1bqt@aol.com (K1BQT)
Subject: How much power do aircrafts TX?

Hi--

Depends upon the type of aircraft. Small private aircraft use small 12-volt transceivers that put out signals in the 10 watt range. Commercial class aircraft use more expensive radios that run on higher electrical system voltages and put out considerably more power. Control towers generally run low
power because the stations they are talking to are all in the local area and a thousand feet or more up in the air. If you want to hear distant towers clearly, you may need to install a directional antenna with a mast-mount preamp.

Hope that helps.

Finally, the broadcasting industry, their investors and all their supporters in government have figured out how to force every TV viewer to have a "pay" box attached to every existing TV in the country, if not the world. This marks THE END of free, advertiser paid off-air television as it has existed since the beginning of television broadcasting.

From the first, I never believed that the public would willingly pay the projected cost of HDTV willingly, given the reasonably good quality prevalent in current NTSC broadcasts in most places, and I still believe that. There is just so much you can improve on 'good', and I know I don't see any attractive advantage to HDTV, however 'clear' the picture.

It now becomes clear that the public will indeed have a choice-pay up or don't watch TV at all. No more Advertiser-commercial-paid TV for free.

Now all the push for HDTV over the past few years is explained. Mr. Hundt was apparently very successfull in his apparent Quest. What remains to be seen is how well the mandated change holds up.

On Tue, 02 Dec 1997 12:21:22 -0600, K0HB@JUNO.COM wrote:

>I keep waiting for some connection to amateur radio equipment or policy
>in this thread.

TV broadcast is the largest consumer of spectrum below 1 GHz. When that giant rolls over, all the lesser players have to pay attention. Of

particular interest to amateurs, the final bandplan releases the spectrum currently assigned to TV channels 2-6 and 63-69. That 72 MHz of freed spectrum may be able to relax some of the pressures placed on amateur VHF/UHF allocations by the little LEOs, and others, desiring new spectrum below 1 GHz.

In addition, the switch from analog NTSC to DTV has considerable implications with regard to TVI susceptability. That also is of interest to amateurs. And it isn't all good news because broadcasters will be sharply reducing power, so over the air TV will become more of a weak signal mode than it currently is.

Offsetting that somewhat is the more robust nature of the modulation and coding. But DTV will *not* use the sort of robust FEC which would make it immune to all types of interference (that would require more bandwidth for the coding overhead than is available in a 6 MHz channel). And the 8VSB modulation chosen is also not an ideal choice for operation in the face of certain types of interference. If DTV is successful in luring many viewers away from cable, amateurs are bound to face new TVI challenges.

We may also see the reverse situation, IE DTVs interfering with amateur equipment. A DTV receiver will be more computer than TV, and we already know the RFI computers can generate. The sweep rates (and magnitude of sweep currents) for the large 16:9 HDTV displays will also produce a new level and type of potential RFI to amateur operations.

So it is a good news, bad news situation for amateurs. We need to be aware of how we are likely to be affected by these sweeping changes in the TV broadcast market. And we also have to be aware of who our new neighbors will be in the newly vacated TV spectrum. There may be compatiblity issues involved with them too.

And finally, the mass market introduction of a new technology will have implications with regard to what will be cost effective for amateurs to adopt and adapt from it for our own uses. High speed RF modem technology will be sharply impacted by the mass market DTV receiver. A new generation of fast and cheap RF modems based on DTV technology could have a major impact on the sorts of operations amateurs may pursue at VHF/UHF.

Larry, you don't have a good grasp of broadcast economics.

Pay TV is a high risk low return retailing of programming. With
the exception of a few boutique events, it is low margin for the
content deliverer, and has the high overhead of retail sales.
The industry average annual ROI for Pay TV is 3%-6%, and only
about 30% of Pay TV events break even. (Of course there are
a few boutique events which do very well indeed. But there is
no daily market for that.)

Subscription TV has lower risk, higher volume, but still a fairly
low ROI. It is still retailing of programming, but more analogous
to K Mart or Walmart style retailing than is pay per view. Annual
ROI is on the order of 6%-10%, and "churn" still makes cost of
sales fairly burdensome.

But free advertiser supported TV is a horse of a different color.
The industry average annual ROI is 22%. The free broadcaster is
selling a different product than the pay TV delivery agents. He isn't
retailing programming to viewers. Programming is something he
buys as bait to lure in the product that he actually sells. That's the
audience.

The business of the free TV broadcaster is selling an audience
demographic to an advertiser. And advertisers are willing to pay
handsomely for that demographic. In prime time, advertisers pay
(collectively) an average of $32 per viewer per hour. And the
broadcaster incurs very little overhead cost of sales to get that
sort of revenue stream.

There are very few pay TV events which can command $32 an
hour from viewers, and no subscription TV services which can
command that sort of revenue. But it is the routine meat and
potatoes of the "free" broadcaster. He understands this business
very well, and knows where the large revenue streams live.
He isn't foolish enough to throw that away to get a lower ROI
at higher cost and risk by trying to retail programming to viewers.
He leaves that to the niche providers who fight over the fragmented

crumbs outside the mass audience.

I've been doing this for over 30 years, and I know how it works, and
where the money is. It isn't in retailing programming to viewers.
You can be very sure that the programming with the largest popular
appeal will continue to be "free" programming broadcast to anyone
who will tune in. The broadcaster will make sure of that, because
that's where the money is.

No, it is not worldwide. (You didn't think the US and Europe would *really*
agree on a single standard did you? The Not Invented Here syndrome is
way too strong for that.) The US and Europe have settled on totally
incompatible transmission standards, and Japan has settled on one
that takes a bit from each of the others, but is incompatible with both.
It is likely that the rest of the world will adopt one of these three
standards,
but likely a different one of the three on a country by country basis.

>If this is worldwide, it will really help us. We generate most of the
>worlds programming. Lots of Marks, Francs, Pounds coming back here (or
>at least the West Coast). It will also be nice when I am in Germany,
>to use the same set and DSS system as I use here. Digital TV (DTV) to
>me is a blessing.

The world has agreed on a worldwide *production* standard. That's a
different thing from the transmisson standard in the digital era. So
worldwide program distribution will be much easier than in the past.
And as you surmise, this will largely be to the benefit of the current
large program production companies. (Though it does open a niche
for the small producer because he won't be burdened with distributing
different versions of the same programming. Only the major companies
can afford to do that now.)

But you won't be able to take your US transmission standard TV to
Europe and watch European transmission standard broadcasts.

The modulation formats are totally different. (Truth be known, the
European choice has a number of significant advantages over the
US choice. Shades of NTSC versus PAL all over again.)

Once everything is back to baseband bits, the video signals are
the same, so you *may* see more multi-standard sets produced
which will decode the different transmission standards back to a
common baseband. But that's likely to be an extra cost option.

TV sound is 25 kHz deviation, which requires a receiver bandwidth of 55 kHz.
FM broadcast is 75 kHz deviation, which requires a receiver bandwidth of
165 kHz, and is spaced on 200 kHz channel centers to provide some guard
band protection. The FT50 wide-FM mode can handle TV sound, but is too
narrow for FM broadcast. That should make it satisfactory for Wx sat pix.

(whether you are concerned investor/hedger or speculator, this info can change your strategy on the way you do your investments)

The aftermath of regional Asian stock markets, is going to have a much deeply rooted affair with their economic background, as well as their future prospects, expectation of further defaults by banks and companies exposed to Forex & equity e
xposure is on the cards.

Some have connected these problems with major hedge fund aggressive selling of local Asian currencies. The Hong Kong dollar, been the only one not affected as yet, due to excessive monitoring of levels by the HKMA, speculation has now risen
that the next couple of weeks should show the HK dollar its proper level, to some dealers its seen as HK$ 10-15 to the greenbuck (US=1), once its current peg gives way.

Now where does the forces of Chain reaction leaves the other markets no matter whether Equity, Debt, Agricultural, Asian, European, North American, where-so-ever-what-so-ever, When badly affected Asian markets collapse, they send a chill thr
ough major Stock Exchanges around the globe, there has always been
a relatively of connections as for example a company in Europe or USA may be deriving their profits from Asia, selling or buying products & services with Asia. Billion dollar fund management advisers dump stocks on a regional basis, and look
out for warning signs on a global basis, this fact is evident by looking at the 87 crash or this year's 1997 repeat.

Portfolio's are re-positioned for long term prospects, or for the better of risk management, with this complete change of strategy, where does all this big money do to the unexposed Investor, it could either be an great opportunity or disast
er for the uninformed
investor.

There are ways and means whereby an investor can protect his exposure by trading Futures contracts with PHILLIP GNI FUTURES PTE LTD, AND FOR THIS WE HAVE A SPECIAL
REPORT : INTRODUCTION TO THE FINANCIAL MARKETS & TRADING OPPORTUNITIES IN COMMODITY, CURRENCY & FINANCIAL FUTURES. (Available on request)

Subject: Butternut 2mtr Tuning?

Hello,

I have a Butternut 2meter trombone base antenna, but I am having trouble
getting the SWR down. Does anyone have the tuning information for the
gamma match?

Any information would be appreciated.

Thanks!

This is a multi-part message in MIME format.

--------------54DA3C953D9A
Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

FOR SALE: Wilson Mark IV VHF Handheld Transceiver ($35 + shipping)

This is an older VHF (2 meter) ham radio (see attached picture below).
Would make an excellent portable backup, emergency or packet radio. The
radio is in working condition, however, I do not have the antenna,
charger or owner's manual. It features:

+ 6 channels (crystal controlled -- see frequencies below)
+ Tone squelch decode
+ DTMF keypad (touch tone dialer)
+ HI/LO power switch
+ External Mic/Speaker
+ 11v, 500ma NICAD battery (last replaced 9/14/91)

Crytals included: 146.520, 146.670, 147.285, 147.165, 146.625 and
147.060 MHz

$35 plus shipping

If you're interested, please send e-mail to gabrown@bellsouth.net

Subject: GO CODE !!! GO CODE !!!

I am so happy that code is a requirement for the best portions of the
Amateur radio spectrum that I wish that there would be more testing that
required code. GO CODE, GO CODE Onward and most of all upward learn it
or stay on the frequencies that are more appropriate for you so that you
can't propagate bad and poorly referenced information about code.
Fortunately anyone that has done the code and is on the H.F. frequencies
never complains about learning it, they may not use it but they don't
complain. Notice the people who complain about it have to do it on the
internet because the frequencies that they use won't get the job done
otherwise, as for their belly-aching and complaining mentality so what,
learn code or stay off H.F. simple isn't it. GO CODE !!! GO CODE !!!

Eric KC7YGH
Code knowledge and proud of it!!!

From: moler@battelle.org
Subject: Opinions of TS-680

I'm considering purchase of a Kenwood TS-680S. This is a general coverage HF transceiver and covers 160m-6m. It is the twin to the Kenwood TS-140S which doesn't cover 6m.

I have seen the review done in QST in Oct 1988, but I'd like anyone who has any experience with this rig to give me some additional feedback on it's performance and user satisfaction. Thanks in advance.

Most large electrical supply houses will carry them. The one I like is made by Delta Arrestors of Big Spring Texas. Cheap and effective. But there are others.

Date: 3 Dec 1997 04:44:59 GMT
From: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Subject: 17.9 MHz IF?

Just opened up the case of a Motorola HT, operating on 138.960 MHz.
The rcv crystal is marked 52286.66 (=52.28666 MHz). It's third multiple
lands at ~156.86 MHz. This implies the rcvr's IF is 17.9 MHz. Is this
a common IF for Mot VHF-high band gear?

Will this radio be easy to recrystal for 146 MHz?

(The transmit crystal is marked 46.320 MHz; the frequencies of these
crystals are not fundamental, correct?)

Thanks in advance!
Jeff KH2PZ

Gary, I guess you didn't comprehend the basic message in my unofficial
communique. I'll reiterate, don't give them any ideas or ammunition in
they're quest for the domination of the worlds communications.
Bill Gates likes to play monopoly not as a board game, but as a global
game.

Isn't just amazing how much range one can get out of a radio when it's
antenna is at 10 or 20 Thousand Feet, even with just a few watts.

Procomm, Procomm Plus, Telex, QModem, or ANY other Terminal program will get the job done. However... you may be required to tell the program just what COM port and IRQ the TNC is on. The same advice holds true for PaKet, TPK, WinPack, Sally, etc. The ONLY terminal program that I've seen that was really fussy was Kantronic's Kanterm that comes packaged with their TNC's. Wants to see COM 1 or COM 2 only.

I had the same problem. Was a bad plated through hole on the bias
board. Easy fix. The board is the oone next to the final cage. Pull
the tubes and check the bias voltage. You will find it on one side of
the board and not the other.

Later.

Subject: Trade Alinco dr-150 te for hf or qrp

I have a like new dr-150 te with manuel, box, mounting bracket,power cord
and spare power cord.Low hours on this radio and still has the plastic
film on the display.
would be interested in tradeing for a hf rig,a unbilt qrp kit really like
the sierra or maybe even a 6 meter or 2 meter all mode rig, am open for
sugestions .
If interested e- mail me at arol1@juno.com
Thanks for reading this and 73's Arol N1WCC

There are preamp projects in The Satellite Experimenter's Handbook, The Proceedings of the Central States VHF Society, and The VHF/UHF Dx Book, among other places. There are also suitable designs in *older* ARRL Handbooks. There was recently a MMIC preamp in QST, but that won't have a low enough noise figure to improve on an ordinary receiver at 70 cm. A few suitable preamps
have appeared in QEX. You really want a GASFET design. Far Circuits offers circuit boards for some of these preamp projects.

There are a number of companies which sell preamps. SSB Electronics and Advanced Receiver Research are well known, and make good ones. Expect to pay from $80 to nearly $200 for these, however. One of the few Hamtronics kits worth buying is their helically filtered 70 cm preamp. This is a good unit,
and fairly cheap too. Forget the Ramsey junk.

Subject: FS: DSI 5612 Freq. counter (Digimax)

For Sale:

DSI Instruments - 5612 Frequency Counter (DSI is now Digimax):

- 9-digit display (7-seg. LED)
- Stable OCXO (Oven controlled crystal oscillator)
- Sensitivity adjustment with panel mounted potentiometer (knob adjust)
- Prescaler enable/disable
- Dual input -
Input 1 - 50Mhz to 1.2Ghz (1Hz to 1kHz resolution)
Input 2 - 50Hz to 50Mhz (0.1Hz to 10Hz resolution)
- External wall transformer supply, carry handle, made in USA.
- Prescaler circuit is improved for excellent 1.2Ghz sensitivity.
- In excellent electrical and mechanical condition, tested to 1.3 Ghz at

about 30mV sensitivity.

$110.00, you pay shipping. (with manual)

Jack Parmentier

On 5 Dec 1997 04:27:41 GMT, kn6epsac@aol.com (KN6EPSac) wrote:

>Been curious about this for a long time. WHY is all aircraft Tx AM and not
FM?

It is primarily just a historical artifact. Back when they started putting
radios in airplanes, AM was the dominant voice mode, so the radios
were AM. Inertia, and a very large installed base, has kept it that way.
AM is generally "good enough" for air to ground communications, and
it does fit in a somewhat smaller amount of spectrum than FM.

There are a couple of other incidental benefits as well. The constant
AM carrier makes DFing fairly easy. And there is no FM capture
effect, so doubling is detectable, and often one can copy both signals
rather than just the stronger one. This has a safety benefit. AC could
switch to SSB, and they have for long HF circuits, but that loses the
ability to DF the signals easily because of the lack of a constant
carrier.

Replacing 570S Battery

Go to your local battery supplier and get a CR2032 Lithium Battery. RS
and most drug stores carry them.

Do the following in exact order.
1. Remove the top and bottom covers.
2. Remove the two brass-colored screws at each side of the top side
brackets holding the front panel to the main chassis. Loosen the two
brass-colored screws at the side bottom brackets (with a slot on each
side) holding the front panel.
3. Hook up the power supply to the radio and turn on the power supply.
4. Turn on the radio and then turn it off (leave the power supply on)
5. Slide the front panel forward and tilt it down and the battery can be
seen in it's holder---most likely a black plastic holder. Replace the
battery.
6. Turn on the radio and turn it off.
7. Replace screws and covers and you're back in business.

Subject: lightning strike detection

Does anyone know of a system for detecting lightning strikes within a
pre-defined area which displays the results as a 3D image on a computer?
There used to be a company in Texas that supplied such a kit in the
early 1980's. It involved placing 4 RX masts around a town and combining
the info from all 4 to generate a 3D map.
Any suggestions?

David Shenton.

Some FACTORY.TPL will not be usefull to you, you will probably
not be able to upload it (who knows what mod you are in)

> p.s. Yes, I did turn the squelch off when trying to upload.
> No hardware mods have been done.
>
> Any help would be appreciated.
>
> Larry
> N1ZGI

Do as follows:

Find e HEX editor.

1. Start the FT50 Programmer and save this as BLANK.RDF
(Start and save (BLANK.RDF is a empty .RDF))
2. Make a Template from your FT50, name it MY.TPL
3. Read from the MY.TPL the bytes on adress 05E2 and 05E3
(let's call them value1 and value2)
4. Edit the BLANK.TPL and set the byte on adress 05E2 to be
value1 and the byte on adress 05E3 to be value2
Change the first 3 letters in BLANK.RDF from RDF to TPL
5. Rename BLANK.RDF to BLANK.TPL
6. Upload the BLANK.TPL to the FT50

Everything will be normal now.

Don't play with the "Pull the cable out method"

Read the following info:

--------------2428246C390A
Content-Type: text/plain; charset=us-ascii; name="Ft50mods.txt"
Content-Transfer-Encoding: 7bit
Content-Disposition: inline; filename="Ft50mods.txt"

FT50R - Software Modifications
Ingra-Beton@t-online.de, Date: 31.03.97
==========
This is modification of the first version, with same fix up's, typing
error corrections and better explanations (one Example too).

The Problem:

I have purchased a FT50R a couple of days ago and tried to make the MOD's
as described by Bill Childers (KE6VVW).

The removal of the solder jumper Nr.1 worked just fine and the
MARS/CAP was there. But as I tried to make the Trick to pull the
adapter cable out of the radio, ..., that don't work.

RT Systems says:
> The firmware inside the radio has been changed so that pulling the plug
> will not toggle the radio into a European mode. This change was made in
> radios with the 3rd and 4th digits of the serial number greater the 05.
> --
> Rod, RT Systems Amateur Radio Supply, Huntsville AL.
> Sales 1-800-723-6922, Tech 1-205-880-3093

So I had to find something else, here it is.

This is a method to do any MOD to your FT50R. The procedure is very simple
and fast done:

1. You make a template from your FT50R
2. Change 3 Bytes in the template
3. Upload the template to your FT50R

So you can switch to any BAND, you don't have do hardware interventions
or similar staff like pull the adapter cable out, ...

If you want do return the FT50R to its original state, just upload the
old (unmodified) .TPL to the Unit.

Information and explanations:

All MOD's can be made by software only. To do the MOD's you need the
ADMS 1C Software (I am using the 1.05 Version) and a HEX editor to
manipulate the .TPL file (I am working with .TPL file's only)
I am using HIEW 5.24 (Hacker's View) but any HEX editor will do the
job (PCT, Norton, Multiedit, ...)

Everyone has noticed the problem after making same MOD's to the Unit
that the old .TPL files can not be uploaded to the Unit any more.
There is a simple protection scheme (2 bytes) that prevents uploading
a .TPL file from a different hardware configuration to the Unit.

This is a description how to bypass this protection. By uploading a
.TPL file with different hardware configuration, (from a other Unit
or just to change the 2 bytes) the Unit will be assigned to this new
configuration.

First a description of Terms and Positions:

1. Current_Byte
....
This is the Byte that tells the current Status (Hardware configuration) of
the Rig, you can get this Byte as follows:
- Make a .TPL file from the Rig.(Menu: <Radio> <Create template>)
- Edit the .TPL File with e HEX Editor.
v this is the first byte*
- On the File Address 05E2 is the sequence 07 XX
^ Current_Byte (Addr.:05E3)
- The Current_byte can be in the Range from 00 to 06.
- *the first byte is usually 07, by experimenting with nonstandard Numbers
you can change this byte also. (03 or same other value, but very rare)

2. Key_Byte (Security Key)
....
The Key_Byte is at the same place as the Current_Byte, but in the .TPL
file you intend to upload.
If you want to upload a .TPL File to the Rig, the Key_Byte must match the
Current_Byte (that means that the Hardware configuration of the Unit and
the .TPL file you intend to upload must be the same). Just change with the
HEX Editor the Key_Byte of the .TPL file you intend to upload to be the
Current_Byte and you can upload anything (any .TPL file) to the Rig.
!!! No more CERR Messages !!!
(As mentioned in 1. if you change the first byte, you have to change this)
(byte also (in the .TPL File you intend to upload) to be the same Byte as)
(in the Template you have just made to read the Current_Byte.)

3. Band-Set_Byte
.....
- Edit the .TPL file you intend to upload with e HEX Editor
v* v Sub_Band-Set_Byte (Addr.:0CE8)
- On Address 0CE6 is the Sequence 07 XX XX
^ Band-Set_Byte (Addr.:0CE7)
This Byte tells the Rig to switch to Band XX (XX is a Nr.between 00 and 06)
To change the Band simply change the Band-Set_Byte to the desired Number.
After Uploading the Modified .TPL File to the Rig, it switches to the
desired Band and the Current_Byte becomes the Band-Set_Byte. That means if
you want to upload later something else to the Rig, you have to change in
the .TPL File you intend to upload the Key_Byte to the new Current_Byte
(with the HEX Editor).
The Sub_Band-Set_Byte tells the Rig in with Sub Band to switch (see Table)
*The byte (0CE6) is usually 07, rare 03 or same other number.

Example
.....
Now, to do a band change do as follows:
- let's assume you have BAND_A1 (USA) and want to switch to BAND_F3
- make a .TPL file from your unit (let's assume original.tpl)
- copy the original.tpl to mod1.tpl (this file we are going to upload)
- read the Current_Byte from original.tpl (as described in 1)
(for the BAND_A1 we assumed you have it will be 01))
- set the Key_Byte in mod1.tpl to be the Current_Byte (01) (as described
in 2). It is logical that the Key_Byte will already be 01, you've just
made the copy, but it is a matter of principle, keep reading.
- set the Band-Set_Byte in the mod1.tpl to 00 (for the BAND_F)
- set the Sub_Band-Set_Byte in the mod1.tpl to 03 (for the Sub BAND F3)
- upload the mod1.tpl to the unit.
- power off, power on, now you have BAND_F3, DONE.

- let's assume you want to switch now to BAND_B2a
- make a .TPL file from you unit (let's assume temp.tpl)
- read the Current_Byte from temp.tpl, it will be 00. (BAND_F)
- copy the original.tpl to mod2.tpl
- set the Key_Byte in the mod2.tpl to be the Current_Byte (00)
- set the Band-Set_Byte in the mod2.tpl to 02 (BAND_B)
- set the Sub_Band-Set_Byte in the mod2.tpl to 01 (Sub BAND B2a)
- upload the mod2.tpl to the unit.?
- power off, power on, now you have BAND_B2a, DONE.

and so on ...

Here are the MOD's (Band's) available:

I 00 01 02 03 I <- Sub_Band-Set_Byte (Address 0CE8)
---
00 I F1 F2a F2b F3 I
01 I A1 A2a A2b A3 I
02 I B1 B2a B2b B3 I
03 I C1 C2a C2b C3 I

```
04 I D1 D2a D2b D3 I
05 I H1 H2a H2b H3 I
06 I FrEE FrEE FrEE FrEE I
-------------------------
^ Band-Set_Byte (Address 0CE7)
```

When you set the Rig in a band (with the Band-Set_Byte) then you can switch from Sub Band X1 to X3 (if solder jumper 1 removed) with the key sequence:
- Hold Lamp and Knob by powering_on to switch to X3 Subband
- Hold Lamp and Knob by powering_on (you will see ALRST prS5) and then press the function key to switch to X1 Subband

The TX for the X3 Bands is:

```
BAND SUB_Band TX
F 3 120-222 320-500
A 3 140-174 420-470
B 3 140-174 420-470
C 3 140-174 420-470
D 3 144-146 432-438
H 3 144-148 430-450
FrEE 50-300 300-540*
```

*It will TX from aprox. 118-233 and 312-508
RX from aprox.71-540 and 600-999 depending from the Unit.

The Sub Bands 1,2a and 2b are with restriction variations in TX and RX and I am to tiered to examine them closely and write them down. I guess that they are not very interesting.

ARS lost - effect

The FT50R has e BAND_PLAN like database and depending for witch country your unit is configured (A,B,C,D & H) it is using the repeater database? from his Memory for that country.

It is understandable that for the BAND_FrEE and BAND_F (TX:120-221&320-499) there is no data in the database because those band's are not for any specific country. That is why the ARS does not work any more, and not? same mess up (magic) in the memory of the unit.

That does not mean that it is not possible to enter additional data to the ARS memory database (I am working on it).

If you want to use the ARS again you just have to switch it into any ordinary country BAND_X and it will work again.

Original .TPL file

If you don't have a original .TPL file, you can make (improvise) one:
1. Start the ADMS 1C software
2. Goto the File Menu and save a .RDF file as original.rdf
(don't download anything from the Unit, don't use a template)

3. Change with a HEX editor the first 3 bytes from RDF to TPL
4. Set the Key_Byte in this file to be the Current_Byte of your Unit
5. Rename the original.rdf to original.tpl
6. Start the ADMS 1C and upload the original.tpl to the Unit.

This will switch your unit to BAND A1 (USA), ARS will work again !

Disclaimer:

Don't TX and RX at frequencies that you are not allowed to!
I do not guarantee the validity of this information,
as Yaesu may change programming or hardware so that some of the
techniques in this document may cease to function. I am not
responsible if these instructions damage your rig in some way. All
I can say is that I have performed the following procedures to my
unit, and I am quite pleased with the results. Your mileage may
vary, etc.

From: sca00135@mail.wvnet.EDU (Sam Hall)
Subject: Kachina comments

It seems like there is quite a bit of interest in the Kachina 505 with requests for information. I have operated the 505 for a couple months and offer the following as my initial impressions. I have been somewhat hesitant reporting on the 505 as I don't want to mislead anyone about the rig. Please accept the following for what it is and nothing more. Remember, one man's trash is another man's treasure, what I like or dislike may be totally different from another perspective. I bought the 505 primarily to remote control at a site 7 miles from my home. I am told the telephone modem will be available after the first of 1998 and can't wait to operate the 505 remotely.

First, the caveats, I am not an engineer, I have not used any sophisticated test equipment (only my eyes and ears) , my total operation time amounts to about 10 hours involving DX, casual contesting and rag chew. I operate about 90% CW and 10% SSB. When possible I tried to compare the 505 with a 1000MP sitting side by side in an A/B configuration.

Generally, the 505 is not Dick Tracy's wrist TV, what it is a very good HF Transceiver. The look, feel and operation is "different", not necessarily better or worse than top of the line YaWoodCom's, but subjectively different.

I can not hear any difference in the receiver sensitivity between the 505 and the 1000MP. The filters in the 505, ranging from 100 Hz to 3.5 KC are very effective and seem to be truly "brick wall" effective. The 505 filters are definitely better than the 1000MP. Off frequency interference heard on the 1000MP is totally eliminated with the 505. Also, the narrow settings (100 and 200 Hz) seem to produce less "ringing" in the 505.

The variable AGC speed capability in the 505 is great. I had no idea what a difference AGC speed made on received signals and receive fatigue. I find myself often adjusting the AGC for given band conditions. Very good feature in the 505.

The DSP is a mixed bag. Describing the DSP operation is quite difficult. First, it is very effective in reducing noise levels. However, when engaged it makes the receive audio somewhat "strange" and difficult to understand weak SSB signals. The more I listen to it the better I can understand the SSB audio. Stronger SSB signals are much easier to listen to and understand. The DSP is wonderful for CW. There seems to be very little, if any, effect on the sound of a CW signal while considerably reducing the noise levels. There is a variable "Noise Reduction Level", but I can't tell much difference in the minimum and maximum settings. There does seem to be a correlation between the "Noise Reduction Level" and the AGC speed. I need to play with this combination a little more before I

can form any opinion. Overall, I find the DSP very useful for SSB and outstanding for CW.

On the subject of noise, the 505 does not have a "Noise Blanker" as most other HF rigs have these days. Living in a high power line noise field, a "Noise Blanker" is critical for my operation. The lack of this feature in the 505 is definitely a minus for the rig. Also, I don't believe the notch filter in the 505 is as effective as the 1000MP. The 1000MP notch filter is not the best out there for my taste so the 505 is definitely lacking in that department. The DSP does lessen he power line noise, with the side effects stated.

One entirely subjective comparison between the 505 and the 1000MP is the overall receive audio. The general noise audio in the 505 sounds higher pitched and raspy to me, while the same noise level in the 1000MP sounds more "mellow" . For me, this results in the 1000MP being a little easier to listen to, especially in high noise and weak signal conditions. The "edge" is taken off the 505 by moving the IF shift -200Hz.. Probably shouldn't even comment on this point because it is entirely subjective and perhaps without merit.

The transmitter seems to be as advertised. I find my best audio reports are with the "Tx Eq" at the maximum bass setting with a Heil microphone. I haven't used the rig for SSB enough to comment, other than to say I have not had any negative audio reports.

The CW "Dynamics" adjustment is a very nice feature. I understand that the adjustment actually varies the CW waveform from soft to hard. CW ops will appreciate this feature. Also, the sidetone is activated by pressing the spacebar with the sidetone volume easily adjusted by keystroke or mouse. Much easier to spot the receiver on frequency than the 1000MP. The numerous other TX features of the 505 are all as advertised and don't need my impressions. The built in tuner is very fast and seems to work fine. The Smith Chart antenna impedance data seems to work fine and is a feature I really like. Another feature I particularly enjoy is the "Band Sweep" display. Performs as advertised and is useful for quickly looking at band activity especially for 10 and 15 meters.

The control software is very, very good. I have used various CAT programs to control the 1000MP and other HF rigs with some programs being better than others. It is obvious the 505 software developers have spend a lot of time making the software intuitive and easy to use. I generally prefer keyboard control rather than mouse control. The keystrokes required to control the rig are minimal and quickly learned. Mouse control is point and click (and sometimes slide). The primary operating controls are accessible directly form the operating screen. Some lesser used controls are accessed only from drop down menus therefore requiring an extra keystroke or mouse click. I prefer every control being accessible directly from the operating screen and hope future software revisions provide for this. One point that deserves mentioning is the operation of the 505 is different than what you are used to with conventional radios. It took me several hours of operation to get the "feel" for using a keyboard to

control a HF transceiver. Didn't really like it much at first (having used dials, knobs and switches for 35 years) but have now grown used to it and find in many respects it is easier to operate than the 1000MP. However, there is a certain primal quality to having the rig with it's knobs in front of you on the operating bench. Also, remember that you will have to have a computer monitor running at all times and if your monitor is like mine, it is RFI dirty. I find this a real problem and am in the process of trying everything I can to clear up some of the interference. There is an extension cable available for the 505 which would allow separation of the radio from the computer which may be one possible fix for monitor noise but I prefer to have the computer and rig together. If anyone has any advice as to a brand of monitor that is RFI free, I would really appreciate the information.

This has gone much longer than I had planned. Hope I have answered some questions. Overall, I find the 505 an excellent HF Transceiver with the exception of the notch filter, lack of noise blanker and pitch/tone (for lack of a better description) of general band noise. Many features of the 505 I like better than the 1000MP. The major pluses are the Band Pass Filters, DSP for CW operation, adjustable AGC, CW adjustments, Band Sweep, Smith Chart impedance data, American made with customer support that is truly exceptional, but that is another story.

I would be happy to answer any questions anyone might have and if you want to stop by my QTH in southern West Virginia for a hands on demonstration just drop me an EMail. 73's, Sam--K8WVA--

I have a Drake dream station for sale. TR-7 with NB,Fan,CW and SSB
filters,PS-7,SP-75 speech processor,MS-7 speaker,7077 Mic,R-7 receiver
that will xcv with TR-7. R-7 has NB,CW,SSB,AM filters, all cables. I
also have service kit with extender boards, tuning tools, and service
manuals on all. Everything is like new and works great. I really don't
need all this, but hate to break up. Will sell all for $1650 plus
shipping. This is a rare and complete station. Also have a MN-7 tuner
to match for another $150. 505-437-8658 or email.

Date: Tue, 02 Dec 1997 23:32:05 -0800
From: Ron Castro
Subject: FT-50R ARS Probs Fix!

Like many who hardware-modified their Yeasu FT-50R's for MARS/CAP xmit,
I noticed that my Automatic Repeater Shift (ARS) function had defaulted
to the European band plan, rendering it useless for US repeater
operations. I use the ADMS 1C programmer (v 1.04), but neglected to
save a template of the origional USA configuration. Even if I had, I
understand that making the hardware mod makes the file unusable.

Good news! Despite reports that the ARS function is "hosed" after the mod, it CAN be restored! To find out how, check out the FT-50R homepage at:
www.members.aol.com/aeimn/ft50/articles.txt
Look near the end for the Ingra-Beton article. The article shows how to use a hex-editor to change the .TPL file (although it works on .RDF files as well) to restore the functions, while retaining MARS/CAP xmit capability. I found that only ONE BYTE needed to be changed in my file to fix the problem, and although I have never edited a hex file before, it worked right away! Any hex editor can be used...I used XTREE Gold, but there are dozens of others out there, including the unfreindly DOS debug. Please read the disclaimers in the article.

One tip...read the article VERY carefully, make sure you FULLY understand it before proceeding, and if you are squemish about hex editing, talk to someone who knows about it to make sure you find the right addresses in your file the article refers to. Save a file that you know works with your radio as a back-up!

Three cheers for "Indi" for solving a problem that has stumped FT-50R users for a long time!

Hi Gary,
I agree with all your comments. On our local repeater, I was one of the people who very much wanted CTCSS to be retrofitted to the unit, so became involved in making it happen.

We are required, on 2m. repeaters, by our licence to have 1750Hz access. However, we can have CTCSS also. We have OR'd the two access modes, as you have mentioned and this gives all users an opportunity to access. CTCSS is far better, as in our application, the decoder module has a much smaller bandwidth than that required for use with 1750Hz (+/-25Hz over here for 1750) and thus an improved signal to noise ratio for detecting the access tone.
When CTCSS is detected, the squelch on the repeater is effectively off and mobile signals will 'swish' up and down rather then chop out and in with mobile flutter. The same applies in reverse on the amateurs rx.

The repeater does not generate CTCSS when giving its identification in beacon mode. Therefore with a decoder on the amateurs rx, they do not have to listen to the beacon. They only hear the repeater when someone access' it.

I appreciate that you will understand this, but these are the enhancements I was meaning in my first reply, that the average user see's as No Value

Add. They need to be convinced (not me Yves). In UK terms they ARE enhancements, but until people have seen/heard the benefits of CTCSS it is very hard to get them to understand the benefits.

Subject: What is the deal - Kachina 505DSP? Junk or what???

This is really kind of funny. I performed a search of all the archived news postings from this group on the Kachina 505, and of the 30 or so postings, 90%

of them where from folks begging for a review. I saw guys claim to have purchased 505's, offer side by side comparisons between the 505 and a FT1000MP

for instance, but they never produce crap. What gives? Is this rig such a piece of crap that no one want to discuss it, or better yet, compare it to anything? I've never seen a subject so avoided in my life. What gives Kachina owners? Don't want to discuss it? Waste of money? Greatest rig ever

made? Quiet, noisy, hard to use, easy to use, IF DSP suck, kicks butt, what? Blows the 1000MP away, can't touch the 870, makes the 756 look like a toy, can't even touch the audio dsp of the 920, what???????? Sorry to rant and rave, but I have 2k burning a hole in my back pocket, want to buy a new HF rig, but just can't decide, and certianly don't want to rule out a potential killer rig like the Kachina 505DSP! Thanks for listening, 73, Mike... WQ0N

Subject: 847 cost???

QST usually reviews a radio after it is in the market for 4-6 months. I
think the reason is to give the manufacturer a chance to correct
mistakes. MFj complained that the TNC 1278 go a bad review since it was
the first batch off the assembly line(trust me it wouldn't
have made a difference if it was 6 months later. Hee hee). If Both the
Icom IC-746 and
Yaesu FT-847 come out in February/March 1998 I would expect both to be
reviewed
by the Fall of 1998.

Subject: FS: Vibroplex Iambic Deluxe paddles, plus matching keyer control panel

For sale: Vibroplex Iambic Deluxe paddles. All chrome parts and base with red finger paddles. In mint condition; entirely as new.

Includes an accessory panel for controlling a keyer. This is a small box that attaches on the side by means of existing screws on the bottom of the paddle; no modifications. The box has 4 small pushbuttons for controlling various functions of a keyer; you wire it up as needed. The box is very nicely chromed

and matches the paddle base exactly. The pushbuttons are red, matching the finger paddles.

I also have a very nice plastic cover for the paddle that I'll include. It has

my callsign neatly engraved in it, so you'll never forget who you bought it from :-)

$95 shipped UPS anywhere in the lower 48 states. Email if interested. Thanks.

Mike, N4PDY

YEASU FT920 TX OUT OF BAND

With the radio off, press[STEP] and [LOCK] (under VFO-A) and hold
these two keys in while you turn the raido on. Now release the two
keys.
Enter the following password: 0761161, then press [ENT].
Press [MENU],Rotate VFO B though the "U" settings till you get to the
"F" Menu (F-01 F-35).

TUNE to "F-35 your Display will say "DESTINA" PRESS ENTER
AND SELECT "OUTSIDE",Using VFO B.that is all there is to it!!!
THIS WILL LET YOU TX 1.8 TO 54MHZ,TO UNDO THE MOD SIMPLY SELECT F-35,
AND PUT IT BACK TO "USA"

The only other adjustments that are of any use is F-09 AM modultation.

After adjustments are made, Press [MENU] to save the new setting and,
exit to normal operation.

WARNING ANY OTHER ADJUSTMENT CAN AND WILL DEGRADE THE RADIO'S
PERFORMANCE.
I CANNOT BE RESPONSABLE FOR YOUR ACTIONS...

> cable channels do now. Bon Appetit!

I manage a video network (not a cable system) that carries a lot of broadcast and satellite channels, so I have followed the HDTV/ATV issue closely.

It will cost the average broadcast station well over $1 million to convert to HDTV/ATV format, more if they have to build a new tower. The only way they can recover that investment is to increase advertising revenues. Broadcasting a single channel, as they do now, even if it is HDTV, will not get the job done. The only way you can develop a business plan that makes any sense is to think of multiple channels, to increase your overall advertising minutes. Then maybe, just maybe, even if the cost per minute drops (because, now that there are more minutes available, supply and demand suggest the market value of each minute will decline) you can increase your income to return your investment. But, I think even THAT is questionable. Makes me glad I am not in the BC TV business.

I don't like to look for bad guys, but if there is someone who is going to make out like a bandit on this deal, it is the electronics manufacturers. There are (plus or minus) 90 million TV households in the USA. If only 50 percent of them buy one new TV or converter, that's a TON of new business they would not have had otherwise.

To answer your question BOTH prices were UPS ground residential.

Did I note in addition to this they also charged me $5.00 to tape the box up. I thought this was their "service charge", but was only a charge for taping the box.

Dear MR. CB Guy

Over the years I have owned several different businesses. Not many
people knows better than I do what it takes to run a business.

I am not a cheapskate as you noted, but believe in being told the truth
and not mislead. That is my main complaint as noted.

It seem like on these newgroups there is always a few people like you
that like to take a cheap shot at posting like this. If you feel MBE is
for you then pay the extra costs. However I thought people would like
to be informed when we discover deceptive business practices such as
this.

The bottom line of my posting which you obiviously did not get, is they
are not telling the truth, and that can get you in trouble.

About five years ago my pastor moved and before he did he gave me a T-21/ARC-5 (28 Volts DC) transmitter. I have never used it and I am in need of money so I am deciding to sell it. It is in great shape. It looks as if it has never been used. Ther are a few minor scratches on top but the face is perfect. It is dusty from sitting in my basement for the last five years. Please make me an offer or email me for more info.

Thanks

As long as it has an unused com port, preferably com 1 or com 2, it can be used for packet. Connect
correct cable interface between cpu port and tnc, your manual for the mfj should have the info, load
any packet software, or use windows terminal package to communicate with tnc. Ur in business.73, mike

Message-ID: <66fpb6$ig1@bgtnsc01.worldnet.att.net>
Source record: 159757

I own both radios and will give you my opinions on both radios.
The w32a is better at transmit and is easier to use. I prefer the true dual band (double recieve) function of the w32a. For convenience, the FT50 is superior. As far as modifications are concerned, I have discovered that the FT 50 mods can be done without opening the radio, by tinkering with the data files uploaded with the ADMS software (thanks to Ingra Beton's hard work and kindly posting in the FT 50 web page). I tried it and I undid the mods (all within one hour, including rereading the instructions about 10 times to make sure I knew what I was doing) In fact it can be done and undone in less than five minutes after the first scary attempt. Anyway, I actually prefer using the w32a for communicating, and the FT 50 for monitoring. If I was faced with keeping one only, it would be the w32a.

KF4PFE

PS.: FT 50 accessories are low cost and better quality compared to the w32a's.

It looks like the power transformer on my Kenwood TS-830S has gone
south. Rather than getting 800 volts a.c. out, I'm getting 354. The
rig still works, but the output is about 15 watts. I don't understand
why the windings didn't just open, but must have shorted somehow.
In any case, if you have an old Kenwood you're parting out, please
give me a call at:

I have shipped with MBE before and been pleased. They give you the
price up front, if you think its too much pick up th box & go
elsewhere. Lou

The confusion is justified.

The summer 1997 AES catalog had a limited-time special at $599. When I called them in Sept or Oct price was back to $699. I ended up buying two from Jun's at $650 each (approx).

As strange as it sounds, a well lightning-protected site can take multiple hits and, unless you see them or examine the point of the strike, you can't tell afterwards. As a matter of fact, Polyphaser makes a counter you can attach to a tower leg that will let you know how many hits or significant static discharges it has taken.

Source record: 159792

Does anyone have an SB752 portable power station by Premier Communications who can answer the following question?

When charging the unit the manual states the charger will automatically cut off when the battery becomes fully charged. Does the charge LED turn off at this time or is it supposed to stay on for as long as charging voltage is being applied?

Thanks for your help.

MBE is a RIP-OFF. The guy is right! They once charged someone who was
shipping to me $29 for packing. All they did was put the item into a
box!
Go to UPS, US Post Office, or someone reputable!

Yup, pretty much the same as every other 160m-70cm all-mode,
full crossband duplex, integrated DSP transceiver pushing out
100W on HF and 6m and 50W on 2m and 70cm on the market.

Wait a minute! It's the ONLY 160m-70cm transceiver currently on
the market, regardless of the other features mentioned! [OK, so
it's not on the market for a few more months, you get my point.]

What other single radio can satisfy the needs of a 75m net-hound
who also likes to work DX on 40-10m (and occasionally 6m for a
real challenge) and likes to keep his two-cents worth in on the
local 2m and 70cm repeaters? How about someone like me, who
likes DXing, fantasizes about being a contest big gun but mainly
just has fun contesting, and wants to get on to the satellites
without having to spend another couple of thousand dollars?

I have seen several statements of "fact" here that I have been
unable to verify. Some seem to think that this radio should or
will have a detachable faceplate. The dimensions I've seen at
http://www.yaesu.com/ft847.html are 10.2" wide, 3.4" high, and
10.6" deep. While that may have qualified as a mobile rig in
the days of the Icom IC-730, it's a bit chunky when compared to
the IC-706, TS-50, and DX-70. Even the face of the radio is
large for remote mounting. In comparison, the IC-706MkII's face
is an inch shorter and 3.6 inches narrower. Even the relatively

large detachable faceplate of the FT-900 is over an inch shorter and an inch narrower. To me it doesn't sound like the 847 is intended to compete in the detachable-faceplate mobile rig market.

I have also seen claims that the radio is double-conversion, that it is triple-conversion, that the DSP is in the IF, that the DSP is in the AF, and lots of speculation on the retail price that appears to be based on the current dollar-to-yen exchange rate while ignoring import duties and the idea that identical products can have radically different prices in different areas of the world (compare the price of gas in Caracas, Venezuela, New York City, and Amsterdam, Netherlands, for instance.)

That said, I'd like to engage in still more wild speculation ;-)

If this rig does full-duplex crossband operation, as the Yaesu web sites in various countries claim, then does it have two separate receive IFs? Would it not be easy to make such a radio do dual in-band receive or crossband receive, too? That would certainly make it better as a contest rig...

Remove the "NoQRM." in my address to reply. Don't you hate unsolicited e-mail advertisements? Me too. I apologize for the inconvenience.

I have had my HT for appox 3 wks and am quite satisfied w/it...
The mod for opening up rx is simple..but I HAVE found some error in SOME data that has been put out...this is simple and it WORKS..
1.-remove battery cover and batteries.
2.-remove 4 screws inside battery area
3.- remove three screws on back (next to belt clip screw and under antenna).
4.- lift back away from unit, being careful of the rubber gasket..which you can remove and set aside.
5.-with the rig face down, you will notice on the left/center edge of the board a very
small blue/green part..this is a "surface mount resistor"..this is the only part visible in this area...remove it...either w/a small soldering pencil tip..which is the best way..I suppose you could cut it loose w/a sharp blade...
6.-replace gasket on unit..careful to put it in its "grove"..
7.reverse install cover-screws-batteries..
I have found the unit to hit most of the repeaters in my area, however it is not always "full quieting"..humm..I have been able to attach an alligator clip to the center pin of the PL-259 going to my 2m. antenna in the home/car, and clip this to the retracted tip of the units antenna and get GREAT results this way...there may be a bit of SWR here, but it wouldnt matter much w/this low of a power output..try-it..!

696. Duplexer 29 Mhz FM

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-07 00:00:00 UTC
From: djt@OntheNet.com.au
Message-ID: <348a8604.5466419@news.OntheNet.com.au>
Source record: 159806

Hi guys,

I am in the process of assembling a 10 Metre FM repeater to be located in
South-east Queensland (VK4 land).

The problem I am having is that very little information is available on
duplexer systems for single antenna repeater operation. Cavities are
totally out of the question due to their physical size. Is there a cheap
way to obtain reasonable isolation between transmitter and receiver ports,
without having to go to 2 separate antennas. The site does not have the
space for the vertical separation needed for the 100 Khz offset.

Please guys..... Someone out there must have the expertise in the
construction of 10 Metre repeater antenna systems.

Regards,

David VK4-TDT

I tried to use it too. Didn't get a GPF error message; instead, it just screwed up the frequency file, making it inaccessible. Had to reload the original software and forget about that patch.

Yeah,... so? Could just as easily point out that you're one of the
previous generations who thought less and less was "your right"
Thinking in "generational" terms (at least in the present) is pretty
damn stupid anyway.

Nicads have a lower terminal voltage, so naturally the low battery warning will occur soon.

You can save money by buying alkalines for this one!

At least trouble. I get about 100- 140 hours uses for each set of Everyready Energizers, and yes, I do transmit! Only replaced my batteries twice in 5 months of use. Thats $1/month for batteries. Hard to beat!

Andy

700. For Sale Hand Talkies

Newsgroup: rec.radio.amateur.equipment

I have the following for sale:

Radio Shack HTX-202 2 meter handie talkie with all accessories, this is about 2 years old,not used very much also it has the extended warranty.

Radio Shack HTX-404 440 handi talkie this is newer with the extended warranty.

The above are complete with the original accessories rubber duck, nicads, alkaline battery pack and original boxes, these are mint, also the deluxe leather case for one and the soft case for the other, and the external speaker mic. Also original receipts

I am looking for 150.00 each or 275.00 for both I will include overnight shipping
If interested email to craigs24@worldnet.att.net or reply to this message.

WireHead Prime (wiredone@raccoon.com) wrote:
: Dave Booth wrote:
: > If you saw all the hate and discontent in the alt.radio.pirate against
: > the US gov you would understand why they are cracking down on you all.
:
: Ummmmm...since when is it illegal to hate or be discontented with the
: government? And in what way does hating the government or being discontented
: with it justify breaking down a guy's door, handcuffing him on the floor
: (pointing a gun at his pets and yelling, "freeze or I'll shoot" to be funny or
: something) and then taking away everything electronic that he owns?

It isn't illegal to be discontent with government, but the
government exists for its own gain, not for OUR benefit, therefore when we
are discontent, they have to move to stifle such unrest, THE VERY SAME WAY
THE KINGS OF OLD DID to put down dissention! We are living in a class
society, and the government is the RULING CLASS!

: And, if pirates are such evil criminals, why are they only RARELY charged
: with an actual crime? Most of the time their stuff gets taken under civil
: forfeiture laws but they never get tried in court for their alledged crimes.
: Sounds like they're guilty until proven innocent to me.

That's because it is NOT a crime to operate a radio transmitter
without a license. Stealing is a crime, murder is a crime, pirate radio
is merely a RULES VIOLATION!

: What's next? Maybe burn someone at the stake for having an 'evil eye'?
: Round up a bunch of minorities and put them in a camp?

That's what they are doing where I live Wirehead. A few years ago
a serial killer came into town and something like 9 black women were found
dead, laid out in various vacant lots and such. No investigation was
performed. I think you know why (predominantly white police force). The
state government here has started selling prisoners to out of state labor
camps, which is A VERY BAD SIGN! Before, it was less likely you would go
to prison because the prisons were overcrowded. Now with slave labor
camps, it is MORE LIKELY you will go to prison because the state gets a
big wad of cash for sending you there. NO incentive to be lenient at all!

: Do you have any idea how stupid you sound? You basically just said that
: people who oppose the government should be punished for it.

That's what he said. I can hear him marching in his jackboots
right now, hand held high, saying Heil Hitler! Death to all who are not

just like me! Death to all who don't THINK the way I do! Yea, I see it.

: You're completely out of your skull. Like I say, when the FCC pulls your
: allocations and auctions them off for commercial services don't come crying
: here. You won't get alot of sympathy.

They came for the Jews, but I did nothing for I wasn't a Jew.
Then they came for the handicapped, and I did nothing for I wasn't
handicapped, then they came for the minorities, then finally came for me!

From: nobody@crosslink.net
Message-ID: <348aba4b.10720038@news.crosslink.net>
Source record: 159814

On 7 Dec 1997 01:49:25 GMT, nitz@clark.net (James A. Nitzberg) wrote:

>After years of using nothing but a G5RV for 10 - 80 meters, I've become curious
>of the "cost" of this multi-band antenna in terms of performance. It runs
>about a 3:1 SWR on most of the HF bands except 20 meters, which is 1:7:1.
>
>It is tuned to 1.1:1 with an internal antenna tuner.

Hello Jim,

What you are saying is that you have a near perfect transformation of
whatever impedance is presented to the tuner by the antenna system,
into a 50 + j0 impedance at the rig. The SWR on the transmission line
is still 3.1:1 or whatever. Are you concerned about losses with these
SWR's? - not a problem at those levels with most coax.

>To those who have performed back to back tests:

What do you mean by back to back tests? Are you talking about an
"A/B" comparison test where you switch back and forth quickly between
two antennas? If so, my tests have been inconclusive. Every test that
I've ever run between a G5RV and an 80M dipole or a40 M dipole has
been inconclusive in that the better antenna depended on the direction
to the other station AND the time of day AND the particular
propagation conditions that day AND yada-yada-yada.

>1. How much difference would a resonant tuned dipole make over the G5RV at
>about 30 feet?

Are you talking about both antennas being at the same 30 foot height?
It would depend on which band you're talking about. For example, an
80 m dipole would be 135', more or less, but a 20 m dipole would be
33', more or less. So the difference between a resonant dipole and a
G5RV is not a valid question unless you specify which band. For
example, on 20 M, the G5RV might well be better than the 33' dipole,
whereas the G5RV would not likely be as good as a 135' resonant dipole
on 80M. What do I mean by "as good". Very subjective - has to do
with pattern, signal strength at the receiving end, etc.

>2. What's the best way to 'feed' a resonant diplole that's about 100 feet
>away? Is there a recommended coax cable?

The best way to feed any antenna 100 feet away is with at least 100
feet of feedline - Ha ! However, as Cecil is bound to mention, there
are "optimum" lengths of balanced line relative to the ability to
match it. The "optimum" length will be different for each band, in
general. However, if you are really clever, you can choose an antenna

length that will make life easier down at the tuner. See Cecil's Web page for details on that.

What about coax as a feedline? Depends on what you mean by best. Are you asking if RG-213 is better than RG-8 which is better than RG-58 - or what? You have to use whatever is appropriate for you pocketbook and power level. I guess the real issue is whether or not coax is better than open wire line. No contest. Either way you will probably have more frustrations over the choice of balun and where to put it than anything else. Why do I assume that a balun is part of the package? Just watch the other responses and judge for yourself.

Not much help, eh? Well, that's the problem with questions, you get more questions back, because no one is going to really understand your problem initially.

> but the fees should be like $25 flat. That's it. But some of these fees or
> overwhelming.

WOW! $25 is dirt cheap compared to other licensing fees like tavern license fees are $500 per year in Wisconsin, ummm same with dictates of the local government here telling us we no longer can have a septic tank for sewer and we MUST connect to sewer...thus since the demands of the city of Muskego dictates to all the people living in the Lake 101.5 FM listening area have to pay on there own expense to connect to the city sewer system plus also pay for the $500 construction permits to dig a trench to run a pipe from the house to the road, etc....

lesse.... umm radio stations wanting to play music thus have to have a license with BMI/ASCAP, etc that's at least a minimum of $500 annually for each music company. Ummm... WOW! people have to pay through the noise for everything.

Where does all that money go???? apparently someone must be pocketing it.

If Class-D ever comes back, or some sort of licensing for micro-broadcasters (which is just a dream....there won't never be any licensing of low power radio anyways) I doubt a license will cost $25...more like $2500... but anyways if they ever change the laws to allow for low power "Microbroadcasting", transmitters like Panaxis, Veronicas, Ramseys, etc... will still be considered illegal to use because they're not FCC accepted type equipment. LPB, Inc. sells certified FCC type accepted Low Power transmitters, but they are not cheap at all.

If I could set up a Licensed Low Power radio station, I would then feel comfortable about advertising the station and sell commercial time on my station to cover the costs of licensing fees, equipment, etc... and make some money on the long run.

But, that's all a dream.... it won't happen.... FCC isn't gonna bow down to allowing microbroadcasting because I see from what I read in some of these messages in this newsgroup would not impress the FCC to allow issueing licenses to Low Power broadcasters.

"DavidC" <davidc@bit-net.com> wrote:
"we cannot long survive when selfishness prevails."

Quite the contrary. The trouble is that people are NOT acting selfishly - that is to say, they are not acting in their own interests.

When people act in their own interests ("selfishly"), they are typically seen to be generous, respectful, productive, and creative. It is when people act selflessly that morals decay, nationalistic aggression breaks out, and individual rights are expunged.

America is now a carnival of errors prompted principally by the toxin of greed and the blunder of selflessness. Greed can be seen to be a corruption of selfishness, in the final analysis quite contrary to self-interest.

From what I've seen, I wouldn't let "Mail Boxes Etc." pack
anything for me! I received a receiver they packed VERY inadequately
and very expensively! Someone did not know what they were doing!
Beware of these places unless you WATCH them pack things up!
Some franchisees are competant some are definately NOT!

721. Free Icom software

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-07 00:00:00 UTC
From: Webmaster <amreg@halcyon.com>
Message-ID: <348B035B.6EF1@halcyon.com>
Source record: 159831

The final version of the software that Icom showed at Dayton 97 is now available, and it's free. You may download it from the AMREG website at http://www.halcyon.com/amreg.

The software offers on-screen control of the following Icom ham radios:

IC-706
IC-706MKI
IC-756
IC-821H

The software is designed to control Icom radios using a serial port and an Icom CT-17 level converter.

The program is designed to implement existing CI-V capabilities provided in each radio. Not all radio functions, e.g. transmit, are allowed under the existing CI-V command structure in these radios. Please refer to your user's manual for specific control capabilities. Control functions outlined in "blue" on the on-screen radio images are the ones implemented.

The software can also be used to work the radio over the Internet. Check out the AMREG site for more details.

Have fun!

As we all know "list" price doesn't mean a thing. Every store likes
to push the "list" price in your face and then tell you what kind of
a "discount" they're willing to give you. So, once HRO's "list" price
is tossed out the ACTUAL PRICE anyone get's charged is only:

(And this is copied off their pages:)
226) KENWOOD TM-742AD, TM-742A W/ MC-53DM BACKLIT MIC $689.95, In Stock
(and the TSU8 decoder is in fact $60.)
237) KENWOOD TSU-8, CTCSS DECODER FOR TH-22/42AT $59.95, In Stock

So, don't play the same game the retailers do with "list" and "what
you'll only have to pay", etc. Thanks.

Source record: 159884

Hi there,

I have a Motorola DPC-550 Cellular Flip Phone for sale. This phone is one of those models that can still be converted into a "cellular scanner" before Motorola took that feature out. The phone comes with a overnight dual charger which charges two batteries at the same time, three batteries, one is brand new, one is used a little, and the third is also used a bit but is the "slim line" type. Also included is the Car DC Adapter. The phone is about as close to "brand new" condition as phones get. Very little used. I have the original box, all ESN and MSN info, lock/un-lock code and everything else except the original manual. Make a reasonable offer. May also consider a trade. I am in the Philadelphia, PA area. Thanks.

737. ICOM 706 MKII Mod

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-07 00:00:00 UTC
From: Mods@My.house
Message-ID: <3489fd3a.534479@news.klis.com>
Source record: 159885

Extended transmit mod for the ICOM 706 MKII

This file may be freely distributed as long as it remains intact, with no
modifications, additions, or deletions.

DISCLAIMER:
I assume no responsibility for damage or inaccuracies contained in this
document. In other words, USE THIS AT YOUR OWN RISK. It worked for me,
however I don't know if it will work for you.

WARNING #1: This mod requires the ability to remove surface mount diodes.
Only those who are qualified to do this should attempt this mod.

WARNING #2: This mod seems to erase all memory channels, etc. You may want
to save this info for reprogramming.

Disassembly:
1. Face the front of the radio towards you.
2. Remove the three screws in a row across the middle of the top of the
radio.
3. Remove the two screws at the top rear (on the sides) of the radio.
4. Pry the top cover off from the back.
5. Disconnect the speaker at the connector.

Modification:
6. Near the top rear of the main circuit board, there is an small, oblong
metal can. Directly below the right side of this can is two surface mount
diodes with a white silk-screened box around them. There is also what
appears to be a circuit board part number just to the left of it (mine says
B4916D). Remove the LEFT diode in the box.
7. To the left of this, there is a test point marked CP3. Just to the left
and above this test point is another box with two *vertically* mounted
surface-mount diodes (Note: there is also a place for 5 more *horizontally*
mounted diodes, with 3 installed). Remove the LEFT vertically oriented
diode.

Reassembly:
8. Reconnect the speaker.
9. Put the top cover back on. Insert the top cover tabs into the slots and
lower into position.
10. Replace all of the screws.

My radio did not require a reset, however I did lose all of my channel memories. It seems to be able to transmit everywhere except below .5 Mhz. I
have not tested the power output at all frequencies yet.

I hope this helps everyone who have been waiting patiently for this mod.

From: Mods@My.house
Message-ID: <348bfe2e.777903@news.klis.com>
Source record: 159887

Subject: IC-756 Expand TX Frequency.

Notice: ICOM can not guarantee specification when expand frequency.

How to change full cover transmit:
- Remove the W805 jumper chip on MAIN unit by soldering iron.
Jumpers matrix located near IC803.

What to do:
Remove bottom cover of IC-756. On MAIN unit board you will see
IF filters and daughter board (DSP filter) on the right side.
W805 jumper and IC803 chip located under DSP board. You have to
remove DSP board (get it up careful) and look for IC803 and line
of jumpers (little green bugs). When it done, unsolder W805 jumper.
Install DSP board and bottom cover back.

```

740. Resonant Dipoles vs. G5RV

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-07 00:00:00 UTC
From: nitz@clark.net
Message-ID: <66cvb5$k6o@clarknet.clark.net>
Source record: 159888

To the wire antenna experts of this group:

After years of using nothing but a G5RV for 10 - 80 meters, I've become curious of the "cost" of this multi-band antenna in terms of performance. It runs about a 3:1 SWR on most of the HF bands except 20 meters, which is 1:7:1.

It is tuned to 1.1:1 with an internal antenna tuner.

To those who have performed back to back tests:

1. How much difference would a resonant tuned dipole make over the G5RV at about 30 feet?

2. What's the best way to 'feed' a resonant diplole that's about 100 feet away? Is there a recommended coax cable?

Thanks for information.

73,

Jim Nitzberg WX3B

From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <66cvth$6lr$6@csu-b.csuohio.edu>
Source record: 159890

A CLASSIC COLLECTABLE VINTAGE AMPRO REEL TO REEL RECORDER

AMPRO CORP MODEL 758 TWO SPEED HI-FI REEL TO REEL TAPE
RECORDER -- MID 1950'S IN NICE SHAPE & EXCELLENT WORKING
ORDER

- GREAT 1950'S ERA BEAUTIFUL STYLING & DESIGN WITH:

* COCOA BROWN CONTROL PANEL & GRAY KNOBS/BUTTON AND RAISED
GOLD AMPRO LOGO.
* MATCHING COCOA BROWN CARRYING HANDLE AND AMPRO LOGO
COVER LATCH
* HAS GRAY SHARKSIN CASE WITH FULL-FRONT BASKET WEAVE
SPEAKER GRILL. Just a great looking unit if you're a
1950's buff & love that styling.

- GREAT UNIT FOR REEL TO REEL COLLECTORS OR FOR SOMEONE
WHO JUST WANTS A GOOD OLD FASHIONED HIGH QUALITY MONO
UNIT.

- HAS ORIGINAL SHURE MICROPHONE MADE FOR AMPRO (MODEL #189).
IT'S ENAMELED TO MATCH THE REEL TO REEL AREA SHEET METAL
OF THE INTERIOR-A NICE TOUCH BY AMPRO CORP.

Great sounding and EXCELLENT running unit for it's age.

The interior is like new and the case shows some wear, but
very minor for a unit of this age.

- SIZE (APPROX.)

16 5/8" WIDE x 10 5/8" HIGH x 16 1/4" DEEP

- WEIGHT (APPROX.)

38 pounds (fan cooled) TUBE POWERED

CONTROLS:

- Dual 3 3/4 & 7 1/2 IPS tape playing speeds.

- Green Eye Tube Recording Level Indicator

- OFF/Volume Knob

- Treble/Bass Knob

- Buttons
* Record & Lock

* Forward
* Rewind
* Play
* Stop

INPUT JACKS

- Radio/Phono

- Microphone

OUTPUT JACKS

- External Amp or Speaker

- Remote Control On/Off Switch & Plug

Handles 7 inch reels.

Plus shipping and handling which won't be much, because I'll pack it free (the buyer will save there). To take it to a professional packing place can cost quite a bit--I hope you agree. Also, to show my gratitude to the buyer, I'll bring it directly to UPS instead of using a local private shipping store which marks up the UPS shipping costs 40% to 60% which is the practice for these stores in order to stay in business.

The asking price is $150, since this unit is in fine shape and not what you would normally expect for a collectable vintage unit. The fellow I bought this unit off of refurbished the mechanicals (his hobby) and gave me a copy of the SAMS PHOTOFACT FOLDER he used with it to work on it. This edition is for the Ampro 757 & 757-A, but is close enough should the unit require maintenance in the coming years. I'll throw that in too.

I can email a color photo and a drawing of the unit for your review, if you wish in the .jpg file format.

743. Ameritron AL-572 Amplifier: Your Opinion Wanted

Source record: 159592

To those operators who have used the new Ameritron AL-572 amplifier, I'm very interested in your comments on this unit.

I would be using the amplifier at home, mostly for SSB rag chewing. I am also a CW operator (no QSK) and a "novice" contester.

The price for this amplifier seems excellent, provided it really delivers on the 1300 watt SSB promise.

Please let me know what you think of this amplifier. I would be running it with a Kenwood TS-870 and dipole/other wire antennas.

Thanks for your help.

I am looking at buying a phone patch that I can use with my HF gear to run 2 ways out of Panama for those who are always looking for it. As of now, I only know of about 3 people in the country that have 2 way capability (although I know there are a few more).

My problem is that I am not very familiar with make or model as I have never owned one before. I am not looking for an elaborate setup that is meant for repeater operation. I am looking for a simple patch that I can make work and can buy at a reasonably good price (new). Any help or opinions would be greatly appreciated!

Thanks!

Hi,

I have been following our discussions on FT-50 and W32A and gained a
lot.
Can someone comment please on ADI AT-600 HTs.

I have found, so far, two sources, both seem ADI-biased at these URLs:

http://www.adi-radio.com/amateur/radios/dualband.html

and CQ VHF review:

http://www.adi-radio.com/amateur/radios/at600_cqvhf_review.html

Thanks,

Audrius, KD5CUV

The TAPR assembly and system manuals for the TNC-2 (with command references updated to 1.1.8) are available on TAPR's ftp site (ftp.tapr.org in /tapr/software_lib/tnc). The MFJ manuals were adapted from these.

Actually, $960 is the MSRP. HRO is selling the 742AD for $690 - $10 with
a free duplexer thrown in. Not that your price isn't fair, but you
misread the HRO catalog.

761. Bulshitsky Antenna reviewed

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-08 00:00:00 UTC
From: "Dr. Know" <rmarks@monitoringtech.com>
Message-ID: <348C8C8D.5F3A@monitoringtech.com>
Source record: 159610

As many of you know the famed Bulshitsky antenna originally had the most gain of any diople configuration or beam type antenna and variable take-off angles at the push of a button. Also the Bulshitsky was chosen for the HARP system but lost the bid due to political pressures to use an American antenna company. Now the Sam Houston Institute of Technology has finished a 3 year study of the Double Bulshitsky with some impressive results. Their computer models show that in the N configuration or the lazy Z this new design yields a 9db gain over the original model and takes up 1/3 the space. Thats a whopping 15db gain! Early reports using amateur operators showed with this antenna working WAS in 30 minutes was not only possible but easily done. All this is made possible with the use of the Bulshitsky patented microprocessor which has the ability to vary the takeoff angle of the antenna based on the freq. working and the time of day, both of which are programmed by the user no more buttons to push. The power handling has also been increased due the complaints of some amateurs that 20kw was not enough so the new model is rated conservativly at 55kw and test show that 100kw can be use in short durations. These highly sought antennas are not available to the public at the present time and those that had them for evaluation have returned them much to their disapproval, but the plans are out there somewhere. Look in upcoming issues of QST for the write up on the new Double-Bulshitsky antenna with microprocessor controlled takeoff angles.

773. VX1R & the ADMS 1D

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-08 00:00:00 UTC
From: Ingra-Beton@t-online.de
Message-ID: <66hheo$u9u$1@news00.btx.dtag.de>
Source record: 159622

Just some short infos, not new, but some people
don't know them jet:

1. VX1 Programmer 1.02

A couple of days ago RT Systems becomes aware
about the existence of the Software mods.
So, becouse there is no checksum for this in the
.TPL file, they have added a extra line in the
VX1.EXE to check if the byte on adress 114C
was changed.
Result: The Software mods are not working with
the version 1.02 and I guess on every
version that will folow.
Solution: Use the 1.02 for Frequency managment
and the 1.00 or 1.01 for the mods.
After the mods you can still use the 1.02 for
Frequency managment.

2. Multiple Frequency Bank Programming

Just insert the line:
AllowAnyFrequency=1
in the YAESU.INI file, and you can program any
Frequency in any Bank (FM,AIR,VHF,...)
This is working in the Versions 1.01, 1.02, ...

3. 15 KHz Step in the ACT2 Band (read: Cellular)

Program in any Bank except ACT2 in a Memory a
Frequency greater the 590 MHz (Example: 900MHz
in UHF-TV), upload this to the VX1, manually edit
the Memory, the 5KHz and 15KHz step is working.
(you can change it to 8XXMHz manually)

4. Problems with the VXPATCH 1.02 installation

In the last days there were a couple of reports
about problems with the installation of the
latest VXPATCH. So here is the solution how to
install it. Go to the RT Systems Web Page at:
http://www.rtsars.com and get the VXPATCH.EXE
(date 12/03/97)
Edit it with a HEX Editor, search the String
MZP (not the first 3 bytes), CUT all bytes

from 0 to MZP, so that MZP will become the
first 3 bytes in the new file. Rename it to
VX1.EXE, and run it freely, it's working great.
And guess what, the Copy Protection is gone.

Dont use this information to get a Free Copy
of the VX1 Programmer, use it only to upgrade
your original Software if you have problems
installing it.

Greetings, ...

This is what I would consider doing. You mentioned a freq. split
of 100khz. The 30mhz Decibel Products duplexer is rated at 500khz min.
You might get a special made but would probably be cost prohibitive
compared to split site operation. I would venture to say that most
10m systems use split site. 1 mile would probably work. (big guess)
The chart in DB's catalog shows 48 db isolation at 1000' horiz
separation.

Tim:
Don't underestimate the profits in the Broadcast TV business.
They don't pay the High 6 figure news readers that salary without
good revenue. Engineering dept's have been living hand to mouth for
years now. Most plants are very out of date, some haven't even discovered
stereo yet. Most terminal equipment is a least 25 years old, many
transmitters
older still. The Broadcaster has choosing not to invest in technology,
except to
cut personnel. Having spent over 35 years in the business I saw a great
change
in those years. When I started the best equipment was the norm and quality
came first. Today that just isn't true. The revenue is going to pay managers
and New Reader salaries and just let the plant run down. Glad I have retired
as the budget wars won't be pretty. Don't expect any large changes very
soon.

I think you made an excellent choice. The receive/filtering combination
in the 870 beats the other two rigs hands down (I own all three, plus a
few more :).

Fantastic rig - you'll love it - it's a dx operators dream machine.

John

Source record: 159702

I think you will find that your D-104 is high-Z and your mobile rig is lo-Z. (10k vs. 500 ohm) You may want to a. use a mic with the correct impedance or b. use an interstage transformer for Z matching to D-104.

790. ICOM 706 MKII Mod

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-08 00:00:00 UTC
From: cfisher@klis.com
Message-ID: <348beb52.7508383@news.klis.com>
Source record: 159703

Extended transmit mod for the ICOM 706 MKII

This file may be freely distributed as long as it remains intact, with no
modifications, additions, or deletions.

DISCLAIMER:
I assume no responsibility for damage or inaccuracies contained in this
document. In other words, USE THIS AT YOUR OWN RISK. It worked for me,
however I don't know if it will work for you.

WARNING #1: This mod requires the ability to remove surface mount diodes.
Only those who are qualified to do this should attempt this mod.

WARNING #2: This mod seems to erase all memory channels, etc. You may want
to save this info for reprogramming.

Disassembly:
1. Face the front of the radio towards you.
2. Remove the three screws in a row across the middle of the top of the
radio.
3. Remove the two screws at the top rear (on the sides) of the radio.
4. Pry the top cover off from the back.
5. Disconnect the speaker at the connector.

Modification:
6. Near the top rear of the main circuit board, there is an small, oblong
metal can. Directly below the right side of this can is two surface mount
diodes with a white silk-screened box around them. There is also what
appears to be a circuit board part number just to the left of it (mine says
B4916D). Remove the LEFT diode in the box.
7. To the left of this, there is a test point marked CP3. Just to the left
and above this test point is another box with two *vertically* mounted
surface-mount diodes (Note: there is also a place for 5 more *horizontally*
mounted diodes, with 3 installed). Remove the LEFT vertically oriented
diode.

Reassembly:
8. Reconnect the speaker.
9. Put the top cover back on. Insert the top cover tabs into the slots and
lower into position.
10. Replace all of the screws.

My radio did not require a reset, however I did lose all of my channel memories. It seems to be able to transmit everywhere except below .5 Mhz. I
have not tested the power output at all frequencies yet.

I hope this helps everyone who have been waiting patiently for this mod.

791. IC-756 Expand TX Frequency

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-08 00:00:00 UTC
From: cfisher@klis.com
Message-ID: <348ceb67.7529951@news.klis.com>
Source record: 159704

Subject: IC-756 Expand TX Frequency.

Notice: ICOM can not guarantee specification when expand frequency.

How to change full cover transmit:
- Remove the W805 jumper chip on MAIN unit by soldering iron.
Jumpers matrix located near IC803.

What to do:
Remove bottom cover of IC-756. On MAIN unit board you will see
IF filters and daughter board (DSP filter) on the right side.
W805 jumper and IC803 chip located under DSP board. You have to
remove DSP board (get it up careful) and look for IC803 and line
of jumpers (little green bugs). When it done, unsolder W805 jumper.
Install DSP board and bottom cover back.

```
---------------
[W801] | |

> the average price for a good antenna? Your help is greatly appreciated!

Your asking a lot! I doubt you will find a new ham radio for under $100
these days. However, you might find a used radio for under $100 (I
bought a two-meter handheld for $100 in a pawn shop once). The antenna
thing is a whole new issue and the cost could range from a few dollars
for parts to build your own or several hundred dollars to buy and
assemble one.

See http://www.arrl.org for information about all you need to know
about amateur radio and, until you get your license (and even after) see
http://ld.net/?kc5fm for low cost long distance service.

Let me know how more I can help.

Well boo hoo.

White christian conservative men have had a pretty good run what with killing most of the native Americans, using slave labor for a couple hundred years, raping and pillaging the landscape, sucking up most of the money so only their white christian conservative sons can get even wealthier. Takes money to make money dontcha know.

At any rate, if all it took was hard work (IE earning) to become wealthy and powerful, why are there more white collar criminals than blue collar millionaires?

It's very simple, MBE takes the rates off the standard UPS chart (I've
seen it in their stores, behind the counter) and doubles or triples
them. UPS doesn't discount, so if you go to any place _other_ than a
UPS shipping point, you'll pay more.

> Prop. 209, quota's giving away the earned previleges to those that did
> not work for it.
> I bet he voted for Senator Ted Kennedy.
> Need I say more, this is what keep liberals in business,
> Robbin Peter to Pay Paul, Take away my right that are earned,
> and give them away free to someone that didn't work for them.

> Shades of the Liberal Democrats.....

Blah blah blah.

Liberal this democrat that. Earned this. Angry about that.

You're living on a few million square miles of land you didn't earn.
You're living off the fat of a couple hundred years of slave labor
that you didn't earn.
You're speaking freely due to rights that YOU didn't earn...but were
fought for by someone who didn't care if you were liberal or
conservative.

So pretty much...you've earned NOTHING that wasn't given to YOU by
someone else.

As for "liberals" (using the current definition of the term)...

Liberals didn't blow up a Federal building on Oklahoma City,
killing innocent women and children
Liberals didn't blow up and open fire at "abortion clinics"
at least attempting to murder innocent women, who may have been
there simply because they couldn't afford medical care or for

obstetric or other exams
Liberals didn't assassinate Abraham Lincoln, John F Kennedy,
Martin Luther King Jr or Malcolm X (Thou shalt not kill)
Charles Manson, Ted Bundy and countless other serial killers were
not Liberals
Liberals did not break into Democrat National HQ in order to
help Nixon illegally win a campaign
Liberals have fought right along with everyone else in every war
this country has ever fought
Liberals did not perpetrate a meaningless and unconstitutional
witch hunt against ALLEDGED communists, who under our constitution,
are guaranteed the right the hold whatever political or economic
views they choose anyway
The Heavensgate and other suicide cults were not Liberals

He who lives in a glass house should not throw stones. So before you
get that special feeling way down low by calling names, perhaps you
should look at your own worldview and the destruction and suffering it
has wrought, not to a few angry hams, but to MILLIONS all over the
globe.

I have a Kenwood TH-79 in excellent condition with KSC-14 rapid charger and SMC-34 speaker mic. I have always used the protective softcase on the radio. I also have two 9.6v rechargeable battery packs. Have original boxes and manual. Will sell as package for $435 shipped CONUS.

I also have a Mirage/KLM B-1030G 2meter all mode amplifier. 10 watts in gets 300 out! Can be driven w/as little as 250 mW. Has preamp. HRO sells this unit for $649.95. Works great. With manual. Will sell for $480 shipped CONUS.

Please email me if you are seriously interested in either of these items.

You're pretty close to the mark in all you say, Cliff. The profits are large, but in many cases they haven't been plowed back into the physical plant except when it was absolutely unavoidable, or for automation to cut personnel. (Automation can be a useful tool when applied properly, but too many stations are using it as a way to eliminate their most skilled people, and that hurts the on air product.) Not promptly replacing obsolete equipment, and getting rid of the most highly skilled people, has had a deteriorating effect on quality. The few remaining engineers are running around frantically with bailing wire and bubble gum trying to keep the old gear going. And the few remaining production people are overloaded too. I could go on and on with long sob stories about this, but you've seen it first hand yourself.

A few stations are using the DTV mandate as an excuse to completely refurbish their plants, and pictures from them will be superb. But many others have decided to skimp by at the lowest possible cost with just a transcoder and a new transmitter. And the DTV pictures from those plants won't be pretty. Management of those stations is counting on people like those in this thread, who say that they don't care about quality pictures, to remain their viewers. Sadly, they may be right.

But anyone who has seen the quality possible with DTV is going to be very disappointed with a transcoded NTSC picture. Some people here have said that picture quality will be no better than DSS, but that's not true. DSS pictures are still converted back to NTSC to be viewed on the home set (and are still shot in NTSC too), and that still sucks. A direct DTV receiver can make even ATV resolution look great. And the HDTV pictures are marvels, as real as looking out a window. But that's only if the source material is treated properly, and that requires a fully digital plant.

Many broadcasters aren't going to spend the money to do that. So
the DTV pictures from them will suck nearly as badly as current NTSC
pictures. The only difference will be a virtual elimination of transmission
artifacts. That's significant, but it won't make the pictures look that much
better to those already getting a good signal. That marginal difference is
going to piss off a lot of viewers who will have spent a ton of money for
very little perceived improvement.

The few stations who are spending the big bucks to totally refurbish
their plants are betting that the audience will be able to tell the difference,
and that the audience will *care* about the difference. If the audience
doesn't care, they will be in big trouble. But if the audience *does* care,
they will reap the rewards of a much larger audience at the expense of
those who tried to skimp by on the cheap. (And that translates into
huge increases in ad revenue.)

I'm hoping the audience does care. The difference *is* really spectacular
when the system is all digital from the pickup sensor to the viewer's screen.
It is like the step up from b&w to color in the improvement in realism of the
pictures. And I think that ultimately the audience *will* care. Just as with
the step from b&w to color, the audience won't be satisfied with lower quality
once they've seen enough high quality video to have their expectations raised.

But there's another side to this. Again, just as with the step from b&w
to color, large changes have to be made in the way source material
is shot. If you try to shoot the same way for DTV as you do for NTSC,
the results are very disappointing because all the things which are
masked by NTSC suddenly become visible. New sets will be required,
new lighting techniques will be required, etc. The whole process has
to be approached differently. Shooting for TV is going to have to
become more like shooting for the movies (but still different). And
that's expensive and labor intensive to do right. I'm afraid many in the
industry haven't grasped that yet. The learning curve is going to be
steep, and I wonder if most managements will have the guts to
ride it to the top.

Some days I think those trying to skimp by on the cheap may have the
right idea. They can let others pay the costs of climbing the very steep
learning curve involved with DTV, and then do their upgrade when things
have matured and costs have come down. But that has a cost too in the
disappointment their audience will have in them until they do make the
jump. That could kill the business by souring the audience on DTV.
It is going to be an interesting decade.

810. MAHA Universal Battery Charger- First Impressions

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-08 00:00:00 UTC
From: drgrant@ziplink.net
Message-ID: <34961735.1095063768@bombay.ziplink.net>
Source record: 159723

I just picked up one of these at HRO for $50. I figured id make a post about it, as people are probably undecided on wether or not they want to buy it.

At first, when I was at HRO, I was not going to buy the unit because I thought it looked too cheap. Its cheap and clumsy look however is what makes it versatile to charge many different batteries though. The capability was just too tempting. And the price was right too, at $50 (just about the cheapest fast charger around, and on top of this it charges just about all the batteries)

So far the unit has fared very well for HT batteries. It has a capability of pulverizing a "dead" nicad unit, and at the very least youll get a little life out of it. I had an FNB-17? (small battery for the yaesu 411/811) that I thought was entirely dead. With

the MAHA charger, I cycled the battery with the "discharge" button and I got at least 30 minutes out of a battery that I thought was totally dead. I imagine that the FNB-17 did have some dead cells in it though. For batteries that seem to be lacking in stregnth, this unit may be handy for extending the life of them. The other main feature I see here is that its a cheap, versatile fast charger. It works in the car too, off the supplied cigarette plug attachment. The only real downside to this, as opposed to a regular fast charger, is that its not just a "drop in" unit- you cant just drop the battery in. However, if you set the charger up for a certain HTs batteries, it only takes a few seconds to take the battery on and off.

-Mike

A few stations may try that, but it won't bring them the same order of
magnitude of revenue that creating more advertising minutes by expanding
free programming will do. That's the heart and soul of the business. A
reporter once asked Willie Sutton why he robbed banks. He replied,
"That's where the money is." Sticking up convienence stores just
doesn't pay as well as hitting the places with the big bucks. And the
big bucks come from advertisers, not from retailing program delivery.

And note that HBO is primarily subscription TV, not pay per view.
Subscription TV's economics are addressed below.

>>Subscription TV has lower risk, higher volume, but still a fairly
>>low ROI. It is still retailing of programming, but more analogous
>>to K Mart or Walmart style retailing than is pay per view. Annual
>>ROI is on the order of 6%-10%, and "churn" still makes cost of
>>sales fairly burdensome.
>
>Right...try to tell that to Hughes Electronics. Those poor boys have

>only X million DTV customers sending it in piles.

And DSS is *still* losing money. Direct TV, Primestar, etc are still having to subsidize receiver sales in order to gain enough market penetration to start earning a ROI. They're hoping to turn the corner and get into the black in the next 5 years, but DTV may kill them yet. Or interactive two-way cable may get them. Their future is uncertain at best. (I think that they'll make it, but it is a gamble. Their competitors aren't standing still.) It took cable decades to get the penetration they needed to start generating a healthy ROI, and it is still less than that of the free over the air broadcaster.

>>But free advertiser supported TV is a horse of a different color.
>>The industry average annual ROI is 22%. The free broadcaster is
>>selling a different product than the pay TV delivery agents. He isn't

>The "free" broadcaster has just gone into the PAY TV business....His
>free channel will be FILLED, I'm sure, with advertising trying to get
>you to buy the football game on 5C Saturday afternoon...wanna bet?

If so that would be very foolish indeed. You can't make money transferring money from one pocket to the other in the same pair of pants. And that's what you're doing when you buy advertising time from yourself. (You can only sell that minute once, and there are only so many minutes to sell, so every one of them better be bringing you a maximum return.) And the networks have contracts with the NFL and other major sporting organizations which lock them into free broadcasting until at least 2008. Cable and DSS tried to buy those rights, but they couldn't pay enough to get them because retailing of program delivery doesn't bring in the revenue stream that advertising does. ESPN and other pay players get the minor events, the crumbs leftover after the big mass audience draws have been gobbled up by the advertiser supported free TV networks.

>>The business of the free TV broadcaster is selling an audience
>>demographic to an advertiser. And advertisers are willing to pay
>>handsomely for that demographic. In prime time, advertisers pay
>>(collectively) an average of $32 per viewer per hour. And the
>>broadcaster incurs very little overhead cost of sales to get that
>>sort of revenue stream.
>

>game! Pinhead Ford, and his noisy, obnoxious, stupid lot commercial
>can NOW get on The Weather Channel...even in the farms 30 miles from
>town! He's gonna be grinnin from ear to ear!

If you say so. What's the current ROI on the Weather Channel? Do you know? Do you know what a local insertion spot goes for on the Weather Channel? I do. It's chicken feed. And the Weather Channel is a hot property

in the cable world. Realize that the few pay cable channels which are advertiser supported don't pass that money to the cable operator. They may throw him a local insertion crumb a couple of times an hour, but they don't share the ad revenues for their spots with him, they *charge* him to carry their programming. He has to make his ROI by retailing the programming to the viewer. Anyone attempting to duplicate what cable is doing over the air will be in the same situation.

Stations have already tried pay TV. It fell flat on its face. I don't know of any station still broadcasting pay TV. The ROI is much better with advertiser supported free TV, even if you're the 9th station in a market.

>>There are very few pay TV events which can command $32 an
>>hour from viewers, and no subscription TV services which can
>>command that sort of revenue. But it is the routine meat and
>>potatoes of the "free" broadcaster. He understands this business

>SOBs and their crappy service are going to be in big trouble when the
>BIG GUNS who own Channel 5 decide they can distribute HBO better.
>Wanna bet HBO will think so, too?

Cable has a 95% penetration in the US. So you're talking about a marginal 5% audience increase if those who currently don't have access to cable are brought into the fold with your pay TV scheme. But the few rural customers you might gain are offset by those in apartment warrens who *still* won't be able to get off the air TV. No, I don't think HBO will think so. HBO has distribution by both cable and DSS already. It would dilute its product too thinly if it added DTV distribution. The other operators wouldn't stand for it, and HBO can't afford to walk away from them.

DTV will offer some alternatives to cable by offering more over the air virtual channels than broadcast offers today. But the number of channels will still be relatively limited, and the broadcaster will strive to maximize the revenue he can get from each of them. And that still means advertiser supported free TV. Willie Sutton knew his business, and so do broadcasters. Most people won't buy a cow if they can get milk for free.

In other words, you're trying to apply the pay cable model to DTV, but DTV is much more likely to use the proven successful free over the air broadcast model to eat into cable's domain. Think of it this way. If Walmart started charging you $5 at the door to come in and shop there, wouldn't you take your busines over to K Mart instead? That's why the free over the air broadcaster has the bigger audience, and advertisers are willing to pay big bucks to gain exposure to it. Lots

bigger bucks than the $5 a head would be netting Walmart.

You've got to realize why cable has prospered. Cable brought TV reception to people who couldn't get good off air reception. And cable brought more program choices to the viewer (for a fee) which over the air broadcast couldn't provide because there weren't enough allocated channels to go around. With DTV, fewer people will be unable to get good reception, and there will be more (free) program choices. That's going to hurt cable, but is unlikely to kill it, and certainly won't compete directly for its pay per view and subscription channels like HBO.

That's a different market niche than the one which brings large revenue streams to the over the air broadcaster. DSS is the primary competitor with cable for that niche. If DSS turns the corner and starts showing a ROI, it may be a very strong competitor to cable for pay TV, but the broadcaster would be a fool to get into the pay TV business. It'd make him less money than he can make with free TV.

The great fear of the local broadcaster is that the networks might abandon him in favor of direct *free* DSS distribution, IE the network would directly pay the DSS provider to carry their programming. That would cut off his major revenue stream, and force him to pay for his boutique programming. (The major networks pay the broadcaster to carry their shows, unlike cable where the cable operator has to pay the cable programming provider to carry their shows.) To stave that off, the broadcaster has made major efforts to inflate his local presence, primarily with beefed up news coverage of the local community. That can't be done via DSS. News is the largest expense most broadcasters have, but it has been seen as worthwhile because it keeps the network from jumping ship by augmenting the audience they can deliver to the network. (In a sense, the network is the largest customer the broadcaster has.)

DTV may change that. Nobody is really certain how, but it is possible that DTV will lower the broadcaster's dependence on the network. OTOH, it may do the reverse. For example, NBC stations may start carrying CNBC on one of their virtual channels instead of letting it go to cable. By making it free over the air, it can command a bigger audience, charge greater fees to its advertisers, and pay the local affiliate to carry it. It is possible that other major advertiser supported cable channels may be tempted to do the same, IE the Nashville Network may see it to its advantage to obtain a free over the air outlet instead of being relegated to cable. That would enlarge its audience, allow it to charge more for advertising, and start paying its DTV affiliate for its distribution. (If you make enough more money, it is worthwhile to pay for carriage.)

But that model doesn't work for HBO. HBO would be an expense to the broadcaster, and force him into the retailing of programming, with all the overhead that involves. Cable is already setup for that since it bills its customers monthly anyway, but broadcast is not. It would cost the broadcaster a reduction of 50% or more in ROI to switch from free programming to pay programming (that's the margin difference between the two forms today). Only an idiot would do that. (Now to be sure, there

are some idiots in the broadcast business, but the stockholders would
take a very dim view of a loss of return on investment of that magnitude.)

I don't think that was his point. For one thing, Mail Boxes, Etc,
and other shopping mall reshippers usually charge only a small
extra fee over the normal UPS cost. He kind of indicated he knew
and accepted that. It was the 300% markup that chapped his hide.

Apparently, the COMDEX outfit tried to make a killing.

I have 2 pieces of high quality video gear which I
would like to either sell or swap for radio gear
(in particular, a NICE 2m/440 dualband mobile rig, HF gear
etc). I never put together the video production/radio project I was
going to, so I need to "cut my losses". I have the following:

1. BARCO multi-freq. cross hatch pattern generator. Has vert. freq settings
of 50, 60, or 100 Hz, and Horiz. freq of 15,18,21,25, or 31 kHz.
Output is either RGB TTL or RBGS analog. In great shape.

2. Electrohome NTSC Decoder. Has 2 NTSC video inputs (BNC connectors) and
RGBS outputs. ALso in great shape.

Let me know if your interested and what you're offering in way of sell/swap.

What worries me is the "my due" attitude. Rights, OTOH, _are_ inherent
(i.e. "yours"). Exercising them, without paying a heavy price, _is_ a privilege.

In the courts, so far, the little guy has lost the Federal vs. State argument
with respect to low power transmission. Outside the courts, the little guy
has already won, due in part to cheap technology. I know of five <5 Watt FM
stations on my side of Indy. THEY co-ordinate frequencies (you know, like the
FCC allows amateur groups to co-ordinate repeaters).
The majority of ordinary people know about the station nearest to my QTH, and
even if they don't listen, by their group inaction to do anything about it,
have shown how they feel about what the Federal Courts believe. "They're not
hurting anybody, so who cares?"
For better or worse, that's the way this country works.

>It will cost the average broadcast station well over $1 million to
>convert to HDTV/ATV format, more if they have to build a new tower.

That's only the tip of the iceberg. That'll buy you a transcoder and a new transmitter, but it won't start to convert your studio to digital. If you go HDTV, you need all new cameras, all new tape machines, all new switchers (routing, production, and master control), all new monitoring equipment (that alone would run well over a million for the average plant), etc. The industry estimate is $50 million to convert a major market station to HDTV.

Of course you could keep everything analog NTSC inside the plant and let the transcoder convert it to DTV for the new transmitter. And that's what lots of stations will do. As they do regular facilities upgrades, they'll create digital islands in the station, interconnected via transcoders, until they finally convert completely to digital in 10 to 15 years.

>a TON of new business they would not have had otherwise.

You've got that right. The EIAJ is grinning from ear to ear about all the new TVs they're going to get to sell. It represents billions in Japan's pockets. And the software companies are grinning too. Defacto this move makes every TV a high resolution computer display, and the rest of the computer costs little enough that most households are expected to add it as an option. That expands the software maker's market enormously.

831. RS Weather Alert Radio Question

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-08 00:00:00 UTC
From: af4480@aol.com
Message-ID: <19971208005200.TAA07463@ladder01.news.aol.com>
Source record: 159775

I have recently seen a mod to reduce the volume
of the Alert Siren in the Radio Shack 12-140 Weather
alert radio. I have a model 12-240 and was wondering
if there is a mod for that one as well. I would really like
to lower the "Alert Volume" without affecting anything
else. Thanks in advance.

Alinco DJ-F1T, used only a couple of
times, still has origional box and looks
brand new.

40 memory channels, CTCSS encode, decode,
and scan (easily find out what CTCSS tone
is being used by another), page others
and send messages, DTMF encoding and decoding
with full 0-9,*,#,A-D keypad, is capable of
xmitting up to 5 watts, outer case is
4.3 x 2.1 x 1.5" with battery pack.

tx 144 to 148mhz,
rx 138 to 174mhz, and
rx 118 to 136mhz AM aircraft.

Mars / Cap out of band TX capable, just clip
the blue wire.

Comes comlete with battery pack, antenna,
instruction manual, service manual (normally
ordered extra), belt clip, battery charger,
and will come in it's origional box.

Heck, this thing is as close to mint as
you can get.

Asking $119.95, OBO.

please remove the second N from the end of
tdragon in my address to respond,

I just ordered a TS-870. Would like to get some feedback from anyone who owns one for a while. Intend to interface with my computer. This will be my only HF rig, traded in 430 and 830 towards it. Hope I made the right choice. I did reaearch three radios extensively, the 870, IC 756 and Ft-920. Any comments would be appreciated.

Tell it to the Maritine service, US Coast Guard and MARS. They used to
use code. Ever heard of packet? You really need to know code to use
that! If enough people stay off HF you may have to go to internet also
because the commerical people (who don't use code) will gobble up your CW/HF
freqs with pleasure (and Uncle Sam will make a few bucks in the process).

Having the mike won't tell you the pinouts for packet unless you disassemble the mike. And if you use it for packet only, you don't need the mike.

If all you need is the pinouts, I think I know someone another state away with a manual. I can ask him for mike connection info.

Phil

Isn't it possible to issue updates as executable files that patch the existing executables, rather than fully functioning new executables? This stops people who don't have any original copy. In addition, I've seen schemes like this where you have to insert the original floppy for the updater to check before it will update the existing copy on the hard disk. That stops people who have a copy of the program on their hard disk, but no floppy version.

Couldn't you do something like that?

I have no problem with you wanting to support only people who have bought a copy of the software. But having updates on your web site is a godsend to your legitimate users for several reasons:

- If I find that I can't do something due to a bug, I can check the manufacturers web site. If the bug turns out to be something that is already known, and a fix is already available, I can update my version *now* rather than waiting a week.

- I don't live in the U.S. Sending an original disk back to the U.S. to the manufacturer is significantly more expensive than it would be for a user in the U.S. When the manufacturer sends me a new disk, I'll usually have to pay some duty or taxes on it. Internet updates are much much cheaper for everyone concerned.

- Shippers occasionally lose packages.

I do hope you can find some way to support your paying customers via the Internet.

Dave

(PS: I did pay for my copy of ADMS-1C. Don't have a VX-1, so I don't need ADMS-1D - yet).

Are you sure those aren't R2002 and R2003? On my FT-50 schematic,
R2002 and R2003 are in circuitry related to the power button. Their
values are 100K and 4.7K. I could not find R2102 or R2103 - resistor
numbering on the CNTR UNIT seem to end at R2101.

If you hadn't gone into a SNIT over it, most of us would have never
known the difference. But we do now...

Maybe someday, there'll be some competition with reliable software
so people won't have to reverse-engineer it to make it work...

Cutting customer service...good move!!!

I don't think you will buy anything with this mod. Increased sensitivity is
no advantage when the received noise is much higher than the front-end noise
of the rig. The signal will be louder, but so will the noise. By the same
amount.

Dear Rod,

after reading messages on the Internet like:

>> Looking at the RT Systems web site, I noticed a new patch dated 3
>> December 1997. Having downloaded it, I tried to use it and got a GPF on
>> my Win 3.1 system.
>>

..
.
> I tried to use it too. Didn't get a GPF error message; instead, it just
> screwed up the frequency file, making it inaccessible. Had to reload the
> original software and forget about that patch.

I have downloaded the VXPATCH and run into a similar problem.

The versions 1.00 and 1.01 have some bugs, and I had the hope that
they are corrected in the version 1.02, so I tried various ways
to install it.

I have noticed that you can simply CUT the .EXE out of the Update,
and I have NOTICED that the Copy Protection was removed.

I am 100% sure that the removal of the Copy Protection was done
by your Company, with intention. It can not be removed by Cutting
the vx1.exe file only.

So I have NOT done anything, I have just commented your, on my
Opinion wise decision.

I deeply respect RT Systems and YAESU, after your rigorous action,
I have decided not to publish anything more about the ADMS Software.

I can only regret your action, and am hoping that you will
change your mind and proceed to take the full advantage of the

digital communications.

You are professionals, do what you thing will be the best for the amateurs.

Greetings, ...

I am looking for phone patch equipment (new) to use with my hf rig to run patches into the Panama area. I have never owned any phone patch equipment before, so I am soliciting advice. I am not looking for anything real fancy, as I do not intend to run it as a piece of repeater equipment. I also don't want to drop alot of money into one, but I would like to be able to run 2 way into the Republic here. I am deployed military, and I often hear parents trying to get ahold of thier family stationed down here, and unfortunatetly, one way traffic is all I have been able to run.

Thank you for your help

Source record: 159637

What is it? AN/ARM 93 TEST SET, DIRECTION FINDER.
TS-2502/ARM 93 Built by Collins radio. Contains a Collins 3 band control head #
C-6889/ARN-83, and two 360' directional bearing indicators.
The control head freq. ranges are 190 - 400 KHz, 400 - 850 KHz, and 850 -1750 KHz. It has various cables and a loop antenna simulator. Appears to be just what it says it is: A test set for a radio direction finding system.

Picked them up from the Marines. Last calibrated May'97. Must still be using these babies
somewhere. Is these the boat anchors they appear to be, or does someone actually have a use
for them? Any info would be greatly appreciated. Will let them (2) go cheap, to a good
home. i.e. to someone who actually knows how to do something with them other than cannibalize
them. If you can supply any info or would like to own these wonderful what-sits; contact:
C. Madsen nccmad@intermind.net

All the MBE places must be allowed to do whatever they want. In one place
in the N Mpls suburbs, I was charged $1.80 more for an approx. $10 shipment
and $2.20 more on an approx. $14 shipment, than if I had driven 15 miles to
the UPS place. Seemed fairly reasonable to me. Seems like the ticket is
to call ahead and see if its a rip.

875. Re: RME 6900 SW Receiver

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-09 00:00:00 UTC
From: Mark McPherson <markm@teleport.com>
Message-ID: <348D075A.63E3A424@teleport.com>
Source record: 159639

Hi Mark,

I had one of these many years ago, as a teenager, in -- lessee -- about 1960 or 1961, so your estimate of its age is about right. It was very heavily promoted at the time (which is why, in nearly-perfect ignorance, I forked over my lawnmowing money to buy it).

The RME6900 was, I think, about the last gasp of Radio Manufacturing Engineers, a very reputable producer of amateur gear to that point. It was said to have been designed under the personal supervision of the company's chief engineer and resident radio wizard of the time.

The RME6900 was, as I recall, triple conversion; in my teenage days I somehow thought that meant more than it does. It was wonderful to look at, with that big shiny metal tuning knob. Selectivity and sensitivity were mediocre at best and stability was worse - much worse. I believe it did have a product detector, though, and remember that selectivity and offsets were set through a single knob which switched modes. It was, in my opinion, inferior to most of its traditional (large, heavy, tuned HF oscillator) contemporaries in the same price class - it sold for $350 when new and was not cheap! It appeared, I think, just before the Drake "2" series, which were much better receivers. The Drakes made it a generation old instantly. They were half the size and weight, a third less money, and worked much better.

You're fortunate to have found one -- I kinda suspect that not many were produced or sold as they were not very popular. Not sure what ever happened to mine as it disappeared along with its Central Electronics 10B/ARC5 VFO/clamp-tube 813 "linear" companions about the time I went off to college. Owning and fiddling with one now would be great fun. But I would say that the receiver is below the standards set by Hallicrafters, National, and Hammarlund in the same period and markedly inferior to Drake and Collins equipment of the period. Of course, your mileage (and that of others) may vary. It's one of the receivers that marks the end of the line for that particular receiver architecture.

Now that I've written all this I find that you can read all about the RME6900 on page 290 of the second edition of Fred Osterman's "Shortwave Receivers Past & Present".

You should have great fun with this radio. It's a classic and very deserving of attention and restoration. Just don't expect performance beyond its capabilities.

Kind regards,
Mark McPherson

I live in Israel and have an IC T7A. The 440 coverage on transmit is from 440 and up. Here we need to transmit from 430-440. I need information on how to modify this unit to transmit from 430 - 440. Please pass on details if you have it.

Thank you

David 4X1FV

John,

So you're saying that there are more blue collar millionaires than
white collar criminals???

Let's analyze, shall we?

Ok...how does one become a blue collar millionaire? Well, it's virtually
impossible through hard work alone. A person could probably acquire a
tidy savings but it'd take YEARS or even DECADES to do so. They could
invest their money but only a small percentage of the time would that
investment lead to wealth rather than no movement in net worth or financial
ruin.

One could inherit the money...but if there was that much money in the
family one would wonder why you'd be blue collar in the first place unless
it was a distant relative, in which case it'd be very unlikely you'd get any
significant portion of the estate...in either case, the chances of inheriting
a million bucks are very very slim.

The final two ways I can see for a blue collar worker to get a million bucks
are to win the lottery, which hardly constitutes EARNING the money as much as
it does just getting lucky (although I suppose they earned the investment
capital necessary to buy the tickets to win), or to file a legitimate or
phoney insurance claim of some sort, which itself hardly constitutes hard work.

I'm going to guestimate a bit but I think it'll be reasonable:

Odds of Any Particular Blue-Collar Worker Becoming a Blue-Collar Millionaire

Hard Work: nil
Inheritance: 1/[20(+/-10)] (and I'm being MORE than fair here)
Lottery: EXTREMELY Low Odds by definition
Insurance: 1/10 maybe or less

So basically, it's pretty darned hard to become a blue collar millionaire.

On the other hand, according to American corporations white collar crime is not only a HUGE problem but a GROWING problem. On Discovery last night on the Justice Files they were talking about just shoplifting, not technically a white collar crime mind you but still indicative. They said the average shoplifter steals $90 worth of merchandise while an internal thief steals $300 or more worth of merchandise. At one job I had, the managers were finally caught stealing hundreds of dollars and thousands of dollars worth of (food) merchandise. With S&L Scandals, fraudulant home equity loan schemes, embezzlement (at my current company the previous book-keeper made off with $20,000 or so, ended up in jail but we never saw the money again) and even (though I find it harder to believe than Conservatives just cry-babying over a Democrat getting elected President) the President is accused of white-collar crime, I find it difficult to understand (unless you are extremely mentally challenged, John) how you could believe that blue collar millionaires could outnumber white collar criminals.

The point being that hard work alone and "earning privileges" cannot account for millionaires. There are a very few who did it through hard work but most inherited their initial investment capital from rich daddy (they were never blue collar to begin with) or broke one or more laws (usually tax evasion at the very least) to get where they are. Or they did it through highly unethical circumstances though not technically illegal. Bill Gatus of Borg basically stole the design for MS-DOS from Digital Research (ever notice how much it looks like CP/M...I wonder why?) and then screwed over IBM in his rise to power. Just because IBM deserved it, maybe, doesn't make it right for Bill to have done it.

In either case, John, if all you're going to do is sit around and repeat the party line and protect the wealthy and the powerful with your words, then don't accuse me of having no proof. Especially, when what comes out of your keyboard is so absurd. Basically, this whole thread got started because, like the good Puritans, the greatest concern of hams is that somewhere somebody is having a good time and you MUST put a stop to it...unless, of course, they're officially licensed to be part of your little fraternal club. Do no-code techs have to carry around little paddles with their call-signs on them?

Face it. You don't give a damn what I say, no matter how well-reasoned it is. All you care about is proving me wrong because I'm not you. I, on the other hand, only care about making America more free and convincing you to stop trying to stop me.

Depending on the composition of your building, you may be able to string up a long wire antenna inside, or even a dipole cut to the specific part of the spectrum you are interested in.

Contrary to my usual feelings about radio shack products, they do sell a decent swl antenna kit...and you can try stringing it up indoors... contact them for the model number.

As you're probably aware - any outdoor antenna is usually better than an indoor antenna - just do the best you can, and don't worry about it.

John

David, I'm not sure you have any choice other than split site the repeater (bring in one side, such as RX on link frequency). Even if you could vertically separate antennas, you'd require a few hundred feet and would probably still need some cavities. Consider picking up some GE MastrII's low band and UHF, makes a nice repeater builder and you can swap out the RX/TX's to make a split site in a nice package.

See:

http://www.mindspring.com/~otterson/mastr2/index.html

Greetings!

I have a set of Kenwood Twins (R599/T599) that need some work. I don't have the time to put them back on the air, and I need the space, so I'm making them available for sale.

The receiver works great and is in nice shape cosmetically. The only problem with the receiver is that the inner vernier knob slips; the outer knob works fine.

I have not tested the transmitter as yet (can do so for a buyer), but the set powers up. The transceive cable is missing, and I don't have a manual. The transmitter appears to be complete, and I'll wager that it is working as well.

I also have the original boxes. $160 shipped (the're fairly heavy).

Thanks & 73,

Tony N8SNC

Source record: 159666

Built to handle 1 watt input for 8 watts output (actually does about 11 watts). Tuned for 50.125, but will convert your AM/FM/SSB/CW input anywhere in the 2m band to 6m output, same mode. (Actually will receive quite well below 50MHz!) May need minor retuning to transmit in the high part of the band. You can replace one resistor in the input pad and have up to 10 watts input. Includes builders manual. I had it about 4 months, and am replacing VHF station with an Icom 706 Mk II. Transverters will only do the split your input radio is capable of, and my Kenwood TS-700S won't do anything but 600KHz splits, so it's not of use to me in working 6m repeaters. $90 plus shipping. E-mail to Web Williams, kr4wm!@sccoast!.net! !!!Remove all ! from e-mail address to reply!!! (Spam protection!)

Thanks & 73 all, -Web

910. Yaesu FT-227R help needed!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-09 00:00:00 UTC
From: lbosard@prairie.lakes.com
Message-ID: <66kecd$k6t$1@usenet85.supernews.com>
Source record: 159674

I am looking for the pin outs for the microphone on the FT-227 2 meter FM rig. I plan to use it for packet. I got the thing without a mike for it so I can't just take the easy route and look at the mike. Also if someone has Mike for this rig they could part with, please let me know.

914. FT-50RD

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-09 00:00:00 UTC
From: Steve Huss <steven.e.huss@tek.com>
Message-ID: <348DC509.4797@tek.com>
Source record: 159678

I&#65533;m considering my first HT purchase and am leaning towards a FT-50RD. While I have yet to convince myself I need 70cm capability I like the idea of monitoring 10 truncked channels of 800MHz. As I understand the Ft-50RD, while you can set up more than one boundary to search on, there are no banks that can be selected for scanning frequencies in memory. Does this mean that if I want to scan just repeaters that I would deselect/lockout the truncked channels and then if I just wanted to scan just the truncked channels I would then have to deselect the repeaters? Is this as painful as it sounds? I know the best solution would be to have a scanner and an HT but my scanner requirements are really very modest and I like the idea of a single package.

Thanks,

Steve

915. FS Icom 271-A 2meter all-mode TT mic $500. shipped

Message-ID: <01bd0503$982452c0$8b9193d0@default>
Source record: 159685

Yes, you should install the software you received and begin enjoying it. We will continue to support all version of the ADMS software. Use the software and IF you have problems let me know and we will correct them as quickly as possible.

Due to people putting the software on the internet and giving it away, we decided to add copy-protect to the programs instead of increasing the price. Ingra-Beton is promoting theft by disassembling the program and telling others how to defeat our copy-protection routines. We thought the updates on the internet would be in everyone's interest; but, now realize that the actions of one can destory all the good we tried to do. We will continue to support all our products but only to the people who buy them.

We are sorry for any inconvenience this has caused.

It will not work under NT, you need to find a system running WIN95. I've tried this also and experience the same. One earlier post somewhere said if you could change the COM port setting to FIFO enabled OFF that you can make it work but I tried that and ONLY success is with a WIN95 system. Also, I live in Huntsville where they write the ADMS software and have verified this with them.

Both the FT-2500 and IC-2000H are pretty solidly made and simple to use rigs, with one exception -- the so called "intermod fighter" receiver. My personal intermod fighting experience with the IC-2000H has not been very good. It might have been the rig, the antenna, the bandpass filter, location, the type of intemod, or the combination of all of the above.

Really, what is the definition of an "intermod fighting front-end"? I don't have a clue. As the modern rigs are trying to do more or less the scanners' job, one can imagine how in the world a radio can be tuned with its wideband coverage and fight the intermod at the same time. Unless it is a technology break thru; otherwise, it will be just a bunch of sale's pitch.

I was worried about interference when I bought my computer 2 years ago. I bought the computer from a local superstore that had a 30 day 100% refund policy. That way, I had 30 days to fix the problem if one showed up. But, no interference, so I did not have to take advantage of the return policy.

934. Up Converter?

I see lots of kits and pre-assembled units for receive down converters and transverters. Does anyone know of an up-converter? i.e.. lower HF bands up converted up for use with a 10m radio? Not necessarily interested in transmit ability, but would be a plus.

Cal Kutemeier <ckuter@ix.netcom.com> wrote:
[I am going to buy my first ham radio. I have selected the W32A. In
[looking at prices at AES and HRO, I am surprised at how expensive the
[accessories are. Can anyone give me a source for an extra battery,
[ext. mic/spkr, desktop quick charger, PC cable and software for
[packet and for programming memory channels,and a case (vinyl or
[leather).

If the W32A is the one I am thinking of, it's in the same case as the IC-2SRA. If so, I would NOT advise buying this radio.

I have the IC-2SRA. The buttons are hard to hit (except accidentally), the thing is top heavy so it falls over easily, and when it falls, the itty-bitty mounting rails on the battery tend to break off. The power button is completely unprotected, and at the very bottom of the panel in a position that almost guarantees that it will be pressed if you, say, slide the rig into the gap between the car seats to keep it from rolling around (which it does a LOT otherwise).

Features are a nice thing, but if the designers had paid a little less attention to style and a little more to the fact that people are actually going to USE the thing, they could have done a lot better.

I am offering for sale a Kenwood TS-140S HF transceiver
that is in excellent condition, both "cosmetically"
and electrically. It has just been checked out and
aligned by an authorized Kenwood service center. Never
been mobile. It has a general coverage receiver, dual
digital VFO's, full and semi CW break-in. Comes with
a manual, hand mic and d.c. cable. Amateur Electronic
Supply price is $680; asking $580. If you have interest,
please contact me at the e-mail address or phone number
listed below.

Hi Dennis,

I had a 706a and sold it. I was vary unhappy with it. Myn
died 3 times, Barly met spec's, and the #1 reason I was unhappy
with the radio was; Icom's attitude really sucked (bad costumer
service!).

Because of there attitude, I will NEVER by another Icom Radio EVER
agian!!!!!!!!!!!!!!!

I need a 600-ohm antenna terminating resistor capable of handling 1KW
input power.

If anyone out there knows where I can obtain such an animal, please
either post in this newsgroup or reply to me via e-mail.

Thanks in advance...

943. Req: Service Manual for HP141T

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-10 00:00:00 UTC
From: donmiller@mindspring.com
Message-ID: <MPG.ef91fb8c1c288e4989689@news.mindspring.com>
Source record: 159509

Greetings,

I own a HP 141T spectum analyzer with a 8555A RF section
and the 8552B IF section.

Recently, the unit's crt stopped illuminating and the
"scanning" indicator light on the IF section stopped
blinking --- it stays on solid. I suspect a power
supply problem.

Does anyone know where I can get a service manual for
the 141T mainframe? If I can get this problem fixed,
I would also be interested in service manuals for the
8555A and 8552B modules to keep for future problems.

There has got to be a source for manuals out there,
given the fact that the 141T was HP's workhorse
spectrum analyzer for at least 15 years.

TIA,

> > those in this thread, who say that they don't care about quality pictures, to
> > remain their viewers. Sadly, they may be right.

In the early days of color TV I worked for a time as a video engineer
at a TV station ran by the US Army Signal Corps School in Fort Monmouth
NJ. During that time I gained an appreciation for good quality TV
picture. At that time I considered the NTSC studio picture to be 'good
quality' and still do. DSS delivers as good quality as I remember the
studio camera video to be at that time. There's only so much you can do
with the 525 line interleaved display, but when it is clean, I am
satisfied with it, I have never been easy to please after the above
quoted job exposure.
However, when I compare my DSS picture with that displayed on this 17
inch .28 pitch computer monitor, I just don't see enough difference that
I would spend big bucks for that difference as displayed on my TV
screen. IMHO only a confirmed video nut would be willing to, given the
small percieved gain in quality, even though there is certainly a
definite advantage in disposing of the 525 line system for those who are
that interested in best quality video. I just don't think the public is
all that interested given the projected cost. Most don't even know there
are 525 lines on their screen.
Also--how about the large-screen projection type sets? Will the same
projection method function on HDTV or will a new scheme be needed if one
doesn't use the NTSC converter? Who wants to be stuck with one of those
that becomes unusable?

My experience has been different. My old, now gone 386SX was extremely noisy (RF-wise). I couldn't have it on anywhere in the house without hearing hash and birdies, especially in the 21 and 24 MHz bands. By unplugging and plugging in the various cables, I determined that the noise was coming from the monitor cable, and the noise didn't change when I turned the monitor off. I also verified that the noise was being picked up by the outdoor HF antenna itself, and not coupling onto other lines (key, mic, power, coax common mode) that were connected to the HF rig.

I now have a 133 MHz Pentium. I have not been able to find any evidence of noise on any HF band.

The old computer was a "no name" built by a large but local assembler. It had no FCC Part 15 label on it. The new, brand-name Pentium has a Part 15 Class B label. Maybe that's significant.

Yes, I know that Part 15 only regulates radiated emissions above 30 MHz. But typically those emissions are harmonics of lower frequency emissions, which I would imagine have to be kept down in order for the regulated emisions to also be kept down.

While I certainly understand your concern, the best copy protection
you have is your cable. Without the cable your software is useless. I
can't imagine too many people would build that particular cable just
to use the software.

Incidentally, I purchased the program and would like to continue to
recieve updates. Do I have to check your website periodically to know
when to mail you my diskette or will you, after registration, make an
effort to notify me of updates?

> 73's W9IXI

Well, the FT227R mic is wired as such...
one pin is PTT...this can be found by grounding it!!! It will key the
radio...
one lead is +12v THRU a 470 ohm resistor...use a voltmeter to find
this lead....
one lead is mic audio.....a lead hooked to it and touched by a hand
will cause a HUM on the TX carrier...
the last lead is GROUND...an ohm meter will find this one...

Now any ham with some knowledge should be able to find that..
I did at age 15 when I first bought my 227R...and its still in svc!
Damn good radio...

If you REALLY can't figure that simple thing out, don't tell Burt

I have a GAP Challenger DX-VIII and it works quite well. I think its best bands are 40 and 20 meters, but it also works well on 15, although I just have not used it enough there to really make a good comparison. Maybe, now that the sunspots are coming back.... :-)

It will work Europe on 80, but not as well as my inverted V [apex at 50', end fed].

I bought mine used and have had it up since `93 with no failures. I'd buy it again.

I have also used it on 6 meters with good results, but it's my only 6 meter antenna so I have nothing to compare it with there.....

Three topics in one message: Batteries, better instructions, and general gosip.

> > OK, so I want to run it on NiCads (the manual says you have to
> > buy NiCads "at user's risk" :@). WHERE'S THE CHARGER?
> > I see there's a pair of (what looks like) charging terminals
> > on the bottom .. what are these for (other than for burning your
> > own radio)?

They're there for the drop-in charger that Alinco wanted to introduce, but hasn't. What with the price drop, they may not be able to make a reliable drop-in charger that costs less than the radio.

Since it says not to use the auxiliary power input when Alkaline (or other primary a/k/a non-rechargeable) batteries are loaded, I have to believe you can recharge NiCds internally -- not sure if NiMh's are as amendable to tricklecharging? -- and they do (now) have a DC adapter and a Cigar-lighter adapter available, or you can do your own 5.5V regulator. I really ought to do this.

Charging out-board is complicated by its taking THREE batteries. To avoid reverse biasing, I try to charge batteries together that were used together, so I haven't use NiCds in them yet; if I find a buy on a NiMh charge that charges singly, I might try it.

I've been feeding my pair of DJ-S41/S11's a diet of Store's Own Alkalkines; our regional "CVS" pharamacy/convenience store chain has a very competitve price on good capacity alkalines.

As regards the non-manual, my early review of the DJ-S41T at http://world.std.com/~wdr/alinco.html has what you can't find on the crib-sheet they supplied. From the look of it, I expect the new DJ-C1/C4T credit-card sized radios have the same user interface and the same non-manual.
My page also has some speculation that I
should update: no, passive re-radiators are a stupid idea, unless you physically stick it into a Yagi as the driven element; the S11 has indeed been released; the FRS version has also been released, but I haven't seen a Business Band version yet, which is too bad, since if you buy a Business Band type-accepted radio for use on a frequency you're covered for, it _would_ be legal to modify one of those for use in the ham-bands you're also licensed for, even though the reverse isn't!
Difference: the DJ-C1T comes with extended receive enabled, and only uses rechargeable internal lithium cells.

References:
Manufacturer: http://www.alinco.com
My early review: http://world.std.com/~wdr/alinco.html
Vendor: http://www.techam.com TechAmerica, a Tandy brand that's
more like Lafayette than Radio Shack has been since Tandy bought it
They're the ones with the $88 price, everyone else is $120.
Don't know if price continues after the new flyer comes out...

Love the radio. Menuing is complicated though and will take some time to learn. Makes "clicking" noise on scan when it switches between HF and 2 meters. Have to set up your own splits for repeater use. Would I buy it again? Yup...

I've heard of a few people that have had problems with over-heating. And I've heard others repeat the story that haven't had the problem. I have had no problems.

Cheapest place to buy? Jun's or R&S. Both are on the Internet but you have to ask for a quote to get the best buy. HRO will meet their price but you have to ask.

969. Negatives To 440SAT Mod?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-10 00:00:00 UTC
From: DavidC <davidc@bit-net.com>
Message-ID: <01bd051d$eb24f460$0c8a92d0@bitnet.bit-net.com>
Source record: 159563

I have been sent this mod to defeat the receive attentuator that kicks in
between 500-1600kHz AM broadcast on the 440SAT. It permits the reception
of distant AM stations without having them attentuated 20db.

The Mod:
> It is not complicated to do this, but the parts are minute and hard to
> reach. I take no responsibility for any unintended results!
>
> Find the "RF Unit" circuit board (x44-1680-00) which contains the
> bandpass filters for each range.
>
> Next to the components for the 0.5-1.6 MHz filters you will find tiny
> resistors R12 (220 ohms), R13 (68 ohms), and R14 (68 ohms). Jumper
> R12, shorting it out. Cut R13 and R14, making them an open circuit.
> You will now have full gain in the broadcast band!

Can any of you Kenwood gurus out there suggest any possible down- side to
this mod for any and all other uses of the 440SAT?

Just want to be sure before I do this! Thanks!

I have had exactly the same problem. I just sent the batteries back
to Yaesu today. I assumed the batteries each had one bad cell as the
terminal voltage would drop about 1.2 to 1.5 volts within the first 24
hours of recharge and no use. I will let you know if it was really
the batteries in my radio or if the radio must be modified to correct
the problem

>
> KA5LMB Hy

It will depend on the rig in question and the specific computer/monitor combination...

I've seen lots of notes from people whos computer/monitor have caused interference problems in their receiver equipment. Myself, I haven't had any problems yet, and I've used four different computer/monitor combinations over the last few years with four or five different tranceivers.

The computer is situated about 24 - 30" away from the rig and the monitor sits on a shelf (eye level) above the radio, about 12" away from the rig. No problems.

If you do have problems with interference, try moving the equipment around and double check you ground connections before tearing things apart to start "shielding" them...

Your reply post covers almost everything, and my comments and
(still yet) speculation follows

> As regards the non-manual, my early review of the DJ-S41T at
> http://world.std.com/~wdr/alinco.html has what you can't find on the
> crib-sheet they supplied.

Saw your review; why not give the copyright to Alinco so that everyone
will be happy?

> From the look of it, I expect the new
> DJ-C1/C4T credit-card sized radios have the same user interface
> and the same non-manual.

No, the card radios (I've been told) have got a better manual.

> the FRS version has also been released,

No. The picture has been on their homepage for a long time,
but never the real stuff. Cannot call it a release. It's just been
a tease

> Vendor: http://www.techam.com TechAmerica, a Tandy brand that's
> more like Lafayette than Radio Shack has been since Tandy bought it

Under normal circumstances, the law of fair trade (don't know the proper
term) should lower everyone else's price. However who knows
that the arrangement is.

Joe B

I would like to buy a copy of the programming software and cable for this radio, but don't want to spend the several hundred bux that KW wants.

I am subject to frequent moves with little notice, so having dealers reprogram the thing every couple of months doesn't appeal to me.

Anyone who has this and no longer uses it, please email me with price and info.

Keith

This is not a good choice as a 2m receiving preamp. The noise figure is
unimpressive, and it is subject to overload and IMD by signals on frequencies
far from 2m. It will likely degrade the weak signal receiving performance of
any decent 2m multimode. This circuit can be used as a utility amplifier on
the test bench, and it can be used to follow a good helically filtered GASFET
preamp to isolate it from varying terminating impedances. But it shouldn't
be used as the first amplifier in a high performance receiving system.

(Note, Tech America sells a similar preamp kit, and there was a construction
article for essentially the same preamp recently in QST.)

SSB Electronics sells about the best commercial preamp for 2m work.
It is a helically filtered very low noise GASFET, designed for mast mounting,
and its TR network can handle 250 watts in transmit. Advanced Reeiver
Research also offers mast mountable GASFET preamps which are good.
If you want a kit, Hamtronics offers a helically filtered GASFET preamp
as either a kit or W&T. It works, and it is cheaper than the better preamps
mentioned above. It is low gain, just enough to overcome the losses of
the helical filters and set the noise figure of the system. That's often
exactly what you want. But you could follow it with the Ten-Tec preamp
if you needed more gain and termination insensitivity. Note that you'll
have to provide your own TR switching circuitry.

(All these companies advertise in QST. Check them out.)

It would be painful to do what you propose. And note that this radio
does *not* trunk track. Even if you mange to set it up to scan just the
channels of a single trunking system, you won't be able to follow whole
conversations because they'll hop from channel to channel at each
"over", and the scanner will stop on the next active channel whether
it is the right one or not. So the fact that it even receives the trunking
frequencies is of little practical value.

If you want to monitor trunking systems, buy the Bearcat Trunktracker.
It finds and locks onto the control channel, and uses the data it decodes
from that to follow a particular talk group as it hops from channel to channel
during the course of a conversation. It's also a 300 channel ordinary
scanner too. And it is more sensitive, and less subject to IMD, than the
FT-50RD used as a scanner outside the amateur bands. $249 from
Tech America. Recomended.

With the money you saved buying the scanner instead of the FT-50RD,
buy a GE PE, or Motorola HT220, or even a Radio Shack HT, so you can
enjoy IMD free amateur band communications too.

Source record: 159582

For the info to all who want to use this mod. I ran this software without uploading any data to the radio. It has 2 switches that are valid to use. One is /R for read. The other is /P for protect. Nothing in the docs say what these switches are for. I ran the program with the /P switch and the radio was locked in "outside" mode with no transmit freqs. No way to get out of this mode or upload any data after running the program with this switch. I ended up sending the rig back to Yaesu and forking over 70 bucks plus the 26 bucks to ship it. They had to replace the EPROM. Several others have had this experience with this mod file. Unless you want to end up with a very expensive reciever (transciever that no longer transmits), don't run this file! Beware!

Felix wrote:

Rod
You bet we should thank Ingra-Beton. If it was not for them I would not have bought the Yaesu HT or the ADMS software.
When I first received the software I had some trouble running it and had to call you. I did get some help from RT but I had to pry it out of you then I was made to feel stupid by the end of the phone call. Hey Rod, no hard feelings, maybe it was just a bad day to call. In my opinion all the patches,the updates, and even the software should be available on your web sight. After all it can't be used without the special cable or the radio that you sell.
The ham radio industry owes a certain percentage of there sales to people like Ingra-Beton. And I, as a user of the information that comes from the news groups, am very thankfull to all the individuals who have contributed accurate information.

> The external power jack on the top, next to the speaker mike jack
is where you plug it in, it will do a through the top charging that way,
of course you have to buy the $38 cable for it. That is why it asks for
5.5 V when 3 AA batteries = 4.5 V, for the charging voltage. I'm making
up a cable with an LM7805, I'll see how well that charges and save
$36.50.

Wish I thought of the NIMH batteries when I ordered it....

I wouldn't trust your analysis if it was the last thing on earth.

> Ok...how does one become a blue collar millionaire? Well, it's virtually
> impossible through hard work alone.

I worked for one as an apartmnent manager. I grew up with his sons. He
worked for McDonnell Douglass and never rose higher than lead man (if
that isn't blue collar, I don't know what is). He and his family bought
and owned three apatrment buildings where I lived, he owned his
residence (in a well-to-do part of the town) and also another house and
apartment building.

He sold each of the three ten-unit apartment buildings, alone, for a
half million each, now,

IF THAT DOESN'T MAKE HIM A MILLIONAIRE, YOU'RE TOTALLY CLUELESS.

[totally clueless BS snipped]

> Face it. You don't give a damn what I say, no matter how well-reasoned it is.

I just received a page, and I consider that more important than the crap
you're saying.

I just proved you WRONG. Why, because you're wrong, that's all. Wrong reasoning. You're even afraid to come out and use your real name.

Good bye, Schmuck.

>backup batteries for the shack.

There isn't one, at least not one that you could apply to all lead-acid batteries, because different batteries are designed with different tradeoffs.

Batteries built for automotive starting put out lots of current for a short period given their size and weight. But their actual capacity in amp hours may not be that large, and if you actually use them for cyclic service they will die rapidly. They just aren't designed to be discharged very far very often.

Deep cycle batteries are designed to be charged and discharged by a large percentage of their capacity many times without failing. But they may not put out large currents into a low-resistance load like a starting battery will.

If you expect to use the backup battery with some frequency, a deep-cycle type will probably last a lot longer. But if you expect the battery to sit there being float charged for years without hardly ever being used, the starting battery is probably cheaper for the same capacity.

Kevin,

For one, you can program in any frequency from 66 MHz to 999 MHz (the radio is RF deaf in much of the lower and higher end). The program was really intended for you to save different files of the whole radios memories/settings. This way, when you go on a trip, you can simply upload/download different memories to the radio.

No squelch, I'm in the habit of leaving it all the way open. (sidebander habit, I guess) I think the problem is in the tx/rx switching, but I'm not 'up' on that circuit. I note that there's no relay in these modern rigs---!? so must be switched by trx or diode?

Hi,
I am looking for the mods for the Kenwood TM-V7A. Also, will this rig work on 800 -1000 Mhz band?
Thanks,
Reggie

1009. Re: Kenwood TH-22AT; "wireless cloning"..

Check Kenwood's website. They have application notes and service
bulletins there. You should be able to find what you're looking for.

No, W32A is brand new, it is nothing like 2SRA. You are probably thinking
about W2A.

Adnan, ICOM America inc.

1013. got an Alinco DJ-C4T (like DJ-C1T but 440MHz)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-11 00:00:00 UTC
From: crum <crum@xmission.xmission.com>
Message-ID: <brg1nzp2lq.fsf@xmission.xmission.com>
Source record: 159408

I wasn't expecting the radio to lack a speaker and require the use of the earphone, but, it's pretty slick, nevertheless!

Anyone else have one?

I like how its transmit range goes down to 420 MHz, out of the box, just like the Standard C5718DA. I don't know of any other radios that do this, do you?

Now, if cordless phone makers would start using Lithium-ion batteries like the C4, that would be great.

For transverters (which are essentially an upconverter, downconverter,
and T/R switching
all wrapped into one) are available from numerous sources. Down East
Microwave is an
excellent example. DEM also has stand-alone downconverters as well.

http://www.downeastmicrowave.com/

For stand-alone upconverters, Hamtronics comes to mind.

http://www.hamtronics.com/
http://www.hamtronics.com/xmtConv.html

They only seem to have stuff for the 2M and 70cm bands, though.

Hello all... I am looking for an automated repeater controller. I want something that still has tech support and parts available to anyone and everyone. If you have something please let me know asap!!!!!!!
Here is the things i'd be willing to trade:

ic-727 hf + 6meters Hardly been used!!!!

ald 24t vhf and uhf mobile (actually a commercial radio) Works great on amateur bands!!

ic-02at vhf ht

as well as some other misc parts.

if you have something of this nature, let me know and even if your not interested in trading maybe we could work something out. If what you have is not of equal value, i either need $ compensation, or other equip compensation.

Thanks de Rod Ekholm Jr. kc7aad@kc7aad.#ewa.wa.usa.noam

Homebrew

Hi all,

It has been a few weeks since I posted anything to the group, but in case you do not know, I have put a few circuits on my homepage. The latest was the G8TGL Terminal Unit which was originally designed to power an old teleprinter. It worked well on the HF bands although it needed a good filter (or a strong RTTY signal).

There have been loads of comments about the transmitters, but surprisingly, the BUG FM transmitter is still the most popular of the circuits!! Isn't it funny how amateurs like to play!!

I am still working on my all valve General Coverage receiver but the last two bands are a bit slow. I have been abroad a couple of times and don't seem to have much time.

Anyway, the URL (the new abbreviated URL) is:

http://come.to/sm0vpo

It is easier to pronounce on HF SSB.

Hope you have some fun with my circuits. Best regards and Merry Christmas. Regards Harry, SM0VPO (ex G4VVJ / G8TGL)

I don't have any experience with that radio, but that problem
is very characteristic of a lot of Radio Shack radios. I know
their 2m/440 handheld ham radios have the same problem,
dead audio for a good 1/2 sec after you release the PTT.
Chances are, there's nothing you can do about it. It
doesn't sound defective to me, it just sounds like a RS rig.

I have a James Millen # 92200, 3KW+ antenna tuner. It uses coax in and coax out, 80meters through 10 meters, with relative power meter, measures forward or reflected power.

The case of the tuner has been repainted light gray, the face is original, and in good condition. The tuner works exelent.

I will ship this tuner, UPS ground, to lower 48 states, for $225.

Dan
The best software to run the 1000MP is written by Juha Lindfors,it includes a simple logging setup,band scope and setup for 1000 memories. Check it out, you'll like it.

> > etc. Looks like brand new. $525 shipped.
> >

A "mint" 520SE can go for about $350 -
DG5 display units go for about $100
MC-50 mikes go for about $50
Shipping will probably cost him about $25 (depending on zipcode)

Add 'em up - comes to $525...

I'd say he's right in the ballpark - not unreasonable at all if the
equipment condition is as he stated...

John

P.S. No, I don't know the guy :)

Wow! You really put me down. You proved the existence of a WHOLE blue collar millionaire. YOU ONLY HAVE TO DO THAT A FEW HUNDRED THOUSAND MORE TIMES TO OUTWEIGH THE NUMBER OF PROVEN WHITE COLLAR CRIMINALS IN THE MEDIA EVERY DAY!

Clearly you can neither read nor go much past what the 700 Club and your goose-stepping friends tell you to think. I could never reason with you however hard I tried. You don't think I'm wrong because I am. You think I'm wrong because you're threatened by anything and anyone that isn't JUST LIKE YOU.

You're nothing but a feckless Nazi with no courage. I'm hiding behind an alias? I'm on the Internet you dullard! I'm no harder to find than you are! That is if you can resolve your rectal cranial insertion long enough to have a little chat with a search engine.

You know...none of this thread would've happened if you hadn't had to just LEAP UP on your soapbox and inform people of your obviously superior knowledge that pirate radio is illegal, which it STILL ISN'T. It's still a violation of Federal Regulations which, in itself, is STILL NOT A CRIME unless such violations are willful and continued!

By the way, you know how the ARRL Handbook and other sources say to keep one hand in your pocket when you're working on a rig? That rule doesn't apply to you. Go right ahead and stick both of those self-satisfiers right into that rig. Electricity can't hurt you any more than your own stupidity, I guarantee it. Shock therapy might help you I suppose.

This sounds like the radio has the AGC or QSK adjustments set too slow.
This is exactly what my Ten Tec does when I select the slow AGC or QSK
settings. If you cannot find an adjustment you will need to contact Rat
Shack and have them adjust it for you.

Depends on what it is. The HW-101 is a classic example of Heathkit
equipment and during its time was widely used by hams. With the power
supply they sell anywhere from $100 to $275 depending on the seller and
buyer. I have one and still fire it up every now and then.

Mine does this too, and in mine the problem is the PTT switch in
the microphone. Sometimes it hangs up and doesn't release unless
I pump the switch a time or two. It does this with the stock RS
microphone, but not with another microphone I've tried with it.

Get a new mike, or debug the PTT switch on yours, is my guess.
But it might be an entirely different problem on yours. GL.

WireHead Prime wrote:

> Wow! You really put me down.

I have you ever listened to yourself and tried to decide what age you are? You sound 13-ish/14-ish. We could care less that you are breaking the law as long as we don't pick up your reception. But if we ever do, you will have infringed on our rights, and at that moment you will reported and your expensive equipment, most likely confiscated. There will be no warning . . .

I would encourage you not to transmit, as is typical with extremist liberals that claim to have all the "fun" (especially those of a teenage vintage), we the middle class consisting of BOTH minorities and whites (wanted to make sure that fact was clear before you jump on top of your racial soap box again), have to pay the bill if the FCC has to send agents out to pay you a visit, and even more if you are sent to prison. Which again, is another infringement upon our rights. So before you go claiming your rights, you had better think about whose and what rights you are taking away in the process. Or are you so self righteous that you can decide what rights of ours you may infringe upon to satisfy your own desire to have "fun"? Remember, we (who are official amateurs) earned the right to transmit, you didn't . . .

Sincerely,

David Pearce

"The World of Ham Radio"
A Gem of a CD
Ike Kerschner, N3IK

Have you ever stumbled onto something truly valuable? Remember the surprise, the thrill? You can experience that same feeling when you examine a copy of the CD-ROM software by AMSOFT called "The World of Ham Radio"! This is one of the best bargains I have laid my hands on in a long time.

This CD has been around for a few years, and I have seen it for sale at several hamfests. Several years ago I looked at it and felt the CD provided a decent call book with some nice software.

The latest copy, however, knocked me over! I held a copy of it for several weeks before giving it the once over, but after I started I couldn't stop. Programs that I had on separate disks were available to me in one location with an excellent menu, and moreover, they would run directly from the CD. For many years I have collected shareware at the price of 2 to 6 bucks a disk, finding many I liked but a lot more that were just ho-bum. If I were to add up the cash laid out to come up with a handful of decent programs I am sure it would be several hundred dollars.

"The World of Harm Radio" is a collection of excellent software, in fact, almost all of the programs I have chosen over the years as being the best are on this CD, plus a lot more, to boot. All of this and a call book, too! Looking up a call is a snap in AMSOFT's "World of Ham Radio." But, let me give you a brief tour of what else is on this CD.

When you type CDVIEW, a listing of many different subjects is presented to you. Choose "Antennas," for example, and you will find 26 different antenna programs that will provide full information on a host of antennas, from simple long wires to yagi and complex loop antennas.

"Basic programs" are a wide range of simple programs written in BASIC which will run directly from the CD. Examples of the Basic listings vary from antennas to z calculations.

Twenty-six different programs deal with Morse code - from learning programs to programs that will allow you to send Morse from your computer keyboard as well as copy code via the computer and shack receiver.

A variety of engineering programs are included, among which are a a simple-to-use CAD program for drawing schematics, a program to lay out PC boards, and tools for designing specific circuits.

Eight different logging programs give you anything you want for contest logging, general logging, and certificate hunting.

One program I particularly like is a training manual for the oscilloscope. As you go through the Oscope manual the computer shows demonstrations of what will appear on the screen of your oscilloscope under different testing situations. Last Christmas a good friend wanted more info on using an oscilloscope and we spent several weekends going over the use of the instrument in my shack. If we had this program, I am sure my friend would have learned a lot more a lot faster.

Equipment modifications also are included on the "World of Ham Radio" CD. I examined all of the mods available on the CD and am anxious to try several, especially one for a scanner I have. Not every piece of equipment is covered, but there is a lot!

Eight propagation programs allow user to determine the best time and frequency to work various parts of the world.

Included are 36 packet programs from very simple to very elaborate terminal programs, information on using packet, and circuits for various packet projects. If you ever wanted to try RTTY, 10 programs on this CD will let you get your feet wet in this interesting mode with minimum outlay.

A very interesting listing for satellite comm- unications provides info on operating and tracking programs, again from simple to fairly complex. There are several programs for SSTV and WEFAX that I am just now beginning to explore.

As always, there is a "Miscellaneous" listing containing 89 programs which I have only begun to explore. There is also a question and answer section that deals with many subjects, Scanner buffs and SWLs will find a lot of good information on this CD: frequency lists, data bases, modifications, and more.

In short, "The World of Ham Radio" gives you hundreds,
if not thousands of dollars worth of information on ham radio,
and all at a price of $29! If you have a CD drive on your
computer, grab a copy ASAP. If you don't have a drive,
consider putting one on your machine just so you can
use this super CD.

Ike Kerschner, N3IK

Greetings. This is a shameless promotion for my collector's guide to
Heathkit amateur radio products. There's still time to get one for
Christmas...
-- Chuck, WA7ZZE

Heathkit: A Guide to the Amateur Radio Products

Reviewed: March, 1996, QST magazine.
Reviewed: Febuary, 1996, Antique Radio Classified.

This is the definitive work on the Heath company, and a "must have" for
collectors and anyone interested in Heathkits or vintage radio. The 250
page book contains:

* a brief history of the company and its product development track.
* a cross-referenced index to more than 160 products.
* a comprehensive reference section to reviews, modifications, and
articles found in QST and CQ magazine.
* a product-by-product description and large, high-quality black and
white photographs of every amateur radio product the company made from
1947 to 1991.

In researching the book, the author interviewed more than a dozen former
employees and many of the engineers who designed and built the now
classic Heath ham equipment.

$24.95 plus $3 shipping and handling.

>I am going to buy my first ham radio. I have selected the W32A. In looking
at prices at AES and HRO, I am surprised at how expensive the accessories are.
Can anyone give me a source for an extra battery, ext. mic/spkr, desktop quick
charger, PC cable and software for packet and for programmi
g memory channels,and a case (vinyl or leather).
>
>Thanks in advance.

Cal:

In the Dec. 97 issue of QST, page 206, the E.H. Yost Co, better known as "Mr.
NiCad" is advertising an aftermarket BP-173 (9.6v, 700maH) battery for the
W-32A. Their price is $49.95. I've had good success in buying products from
the company and recommend them to everyone looking for batteries.

Also, the Radio Shack $20 speaker-mike fits the W-32A.

From: Laird Allshouse <lairda@ncentral.com>
Message-ID: <66pn0s$s80@news2.zippo.com>
Source record: 159490

There is obviously a lot of commerce going on between buyers and sellers using these newsgroups, and as a potential buyer, I would like to know how these transactions are conducted.

How are buyers assured that equipment they are buying is really worth an agreed-upon price? While I know that monitoring the NG will provide a good idea of the range of prices asked for a particular radio, how can you know the electronic (as opposed to the cosmetic) condition of a rig?

Webcor Regent Coronet Stereo Model #2380-1 reel to reel. Made in Chicago. Excellent running tube unit from late 1950's or early 60's. Has separate optional Webcor compact mini-suitcase speakers that fold into little suitcase. Handles 7 inch reels. Has top-end options for its time. Weighs about 38 lbs by itself. No mikes, missing small piece of cover plate on bottom, have SAMS photofacts manual for unit. $200 or best offer plus S&H. Have photos if you wish me to email them to you.

Will consider trades all or in part for Civilian or Military tube tester as well.

> Any one have the Mods for this unit. Need mod for receive on 440mhz.

There is a modification that extends RX and TX in both 2m and 440 bands,
however, it involves removing two TINY diodes sandwiched between the two
PCB's, so hope you are a good surface mount desolderer - I used dikes
and crushed them on mine (good thing I got the right ones).

Unfortunately, I cannot remember which exact diodes need to be removed,
so I will open mine up and find out for you and post here.

Regards,

1084. Re: Kenwood TH-79A

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-12 00:00:00 UTC
From: Mike Bishop <m-bishop@worldnet.att.net>
Message-ID: <66sor8$2f@bgtnsc03.worldnet.att.net>
Source record: 159295

THIS JUST IN...

As I previously posted, there is a mod (unfortunately not a pushbutton) to open TX and RX on the TH-79A... Fortunately I found the instructions so I didn't have to open mine up to see what diodes to crush, er I mean, REMOVE.

This mod will open RX as follows: 67MHz-174MHz on 2m band, 400-511MHz on 70cm band. It was also open TX as follows: 136-179MHz on 2m, 400-511MHz on 70cm. According to the information I have, the output power drops to about .5W at the upper and lower extremities of the opened band.

WARNING! BEFORE PROCEEDING, DISCLAIMER: I AM NOT RESPONSIBLE FOR THE EFFECTS OF THIS MODIFICATION -- IF YOU SCREW YOUR HT UP, IT IS YOUR OWN FAULT!!!!!*

That having been said, here's what you do:

Open up the radio, on the lower right hand corner of the front PCB (as viewed from the back) there are eight TINY diodes, numbered D302-D308. Remove D304 and D307 (hopefully by soldering, so if it doesn't work, you can put em back in <-- YEAH RIGHT, GOOD LUCK).

That's it. You can now monitor outside the band. WARNING! You can also TRANSMIT as well, so be careful not to key up when out of the legal band.

This weekend is the Fontana swap in Fontana at the A.B. Miller high school...

It starts about 7AM or so, and lasts until about noon.. Not a really big one, but usually pretty good.. Fontana is out East, past Pomona and Ontario off the I10 (San Bernardino) freeway.

W32E is European version, and it can't be found in the US. By the way, W32A original antenna (with a plastic base) greatly outperforms ANY rubber duck antenna. If you need something better, consider 1/4 lambda telescoping whip.

1100. Kenwood Th-79/-G71a, Which to Buy?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-12 00:00:00 UTC
From: dkulha@vom.com
Message-ID: <dkulha-1212972333460001@207.212.58.243>
Source record: 159311

I think I deserve a Christmas Present and a new HT is in order...I want a Dual Band HT and Kenwood products have been good to me, I don't see many complaints so I'm leaning this way and considering these models.

I'm torn....I'm not real knowledgeable about either but read the QST review on the 79 a bit back and checked out Kenwood's Website...

On the -79, I like the ability to hear two freqs at once (I know it can be confusing but at least I know the other one is active w/o looking). I like it's form factor more (taller and slimmer). It's an established product. Wish it had the 71's backlit keys and water resistence....

Then too the G71 is claimed to be milspec waterproof and has the backlit keypad, both very desireable. Looks a bit more sturdy. HRO has it for $370ish and Texas Towers for $350....the 79 is around $335 at HRO I believe...I'm a little concerned about new model "bugs" with the G71a

A few bucks don't matter much...Your thoughts are appreciated. I'm wondering just how "waterproof" or resistant the G71 is...I'm signed up to do ACS (aka RACES) stuff at the Russian River and it has been/looks to be a little wet this winter...

Thanks in Advance....Don Kulha KE6QHP

Source record: 159314

I posted the same question awhile ago and got a few answers including this one.I have since then investigated the IC706 my self and this is the correct function.

TSTRT is both an input and output. Pull TSTRT high and the IC706 thinks there is a tuner connected and the TUNE-button is working. When pressing TUNE, TSTRT goes low for 500ms. If you pull TKEY low now the IC706 goes to tune-mode until TKEY goes high again or you press the TUNE-button again.

Good luck

Yes, you are correct there are no relays anymore for that purpose. All switching is done via a transistor. Someone on the NG mentioned the ALC on the front end being abnormally slow for some reason. I agree that would cause this symptom. Maybe some investigation in this area would be in order...

Well, if nothing else, perhaps I kept you folks busy for a few days so you'd have less time to run around with your little DF rigs seeking out 'evil pirates' and turning them in.

Maybe I am immature (BTW, I am quite middle class and nobody ever gave me ANYTHING) but I'll tell you what...you're certainly no better.

In fact, even if I'm totally wrong and misled...at least my heart's in the right place. At least I care about someone other than myself. At least I don't just sit around smugly telling everyone, "That's the way the world is...it sucks... and I'm going to make sure it sucks more for you than it does for me." You'd call me immature even if I weren't.

I've received ALOT of mail messages saying, "Yeah I agree with you but why are you bothering with those guys?" Frankly, they're right. And I've forced you to reveal what you truly are. You're so vile I don't even have a name for you.

So I'm going to prove that I'm the bigger man...and end this thread. You want the last word, here's your chance. You just go ahead and take out all your hatred and self-righteous feelings on me. You may say that I let it go on too long, but so did you. So you just lay into me with all that anger that you've got bottled up inside. Who knows? Maybe you'll get it out of your system enough that your wife, your children or that innocent (gay/lesbian/black/white/asian/buddhist/whatever) will be spared your rage for one evening.

I have the courage to do something you haven't done: Give you the last word.

> I wasn't expecting the radio to lack a speaker and require the use of
> the earphone, but, it's pretty slick, nevertheless!
>
> Anyone else have one?

Got one about a week ago; early Christmas present. I've been very pleased with it so far. I was able to use it for five days before needing to recharge the battery and that was without giving it an initial juicing; I just pulled it out of the box and fired it up. Recharge time was right at the 2 hours advertised.

I have been surprised with both its range and audio quality. I have a local repeater system that I can light up two of its sites with the C4T (5 miles and 12 miles away approx). Also, the menuing system is butt simple to learn. The extra flexible antenna for "pocket mobile" operation was a nice touch.

One thing that you may not know is that Alinco offers a speaker/mic that will work with the DJC1/4 series WITHOUT the EDS-7 adapter. It is an older model (EMS-1Z), but has a 3-conductor plug which precludes the need for that extra adapter. Ham Radio Outlet had one for $39.95; hope it's not bigger than the radio.

Now if someone would do a micro-mini TNC I could combine my PalmPilot Pro with the teensy Alinco and have the world's smallest packet station. :)

1114. Computer Noise

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-12 00:00:00 UTC
From: Tom Branch <k4nr@mindspring.com>
Message-ID: <01bd0710$09c63de0$LocalHost@ms166705>
Source record: 159352

Greetings,

I just upgraded my old 486 to a Pentium--fired up the rig and computer (logging) and found S9 noise on 40, 80, and 160. Shutting off the monitor was no help--but turning off the CPU eliminated the noise. Disconnected the antenna and noise goes away as well. Tried grounding the computer case to the station ground--no help. I'm going to try replacing the keyboard with the older one later today. Anyone else experience this kind of problem? Any ideas would be appreciated!

I need someone experienced in working on older receivers to repair and
allign my old HRO 50-T1. It needs a power transformer (I have one that
I think will work), and I would like it tuned up and working well,
recapped if needed, etc. It's well beyond my capabilities to do a good
job on it. Prefer someone reliable anywhere around the Austin area.
Reasonable pay is no problem. WB5JEO Lockhart

Tom,
Several things come to mind:
Bad or noisy cooling fans on the power supply or CPU.
Are your coax cables routed close to your PC case. (I had this problem combined with bad grounding, moved my coax away from the PC case and RFI cleared up.)
If you can, make sure that your PC is on a seperate voltage source from your Rig.
Two words, Good Grounding! :-)
Move your PC farther from your RIG and see if this clears up the RFI.

These are some of the more common causes to your problem, also when you upgraded did you replace any of the system hardware, floppy drive, HD, etc., this could also be the noise maker.

Hope this helped, and good luck.

> the electronic (as opposed to the cosmetic) condition of
> a rig? de KB4INK Laird

Mostly trust, the honor of people in community, and some public opinion-related accountability. Sort of how a real civilization is supposed to function. :-)

Generally it works out pretty well, I've only had a couple of small bad experiences as I have thrashed around buying, selling, and trading to get "just the right" mix of gear for my newly reconstructed shack.
(Yes, I know, I'll never get it quite right!)

If you want extra protection, I guess you could buy COD. It's a pain for all involved. You have to be there when it arrives. The delivery person has to wait for you to open and inspect it, someone has to pay extra for the COD cost, and the seller has to wait a while for their money.

Ask lots of detailed questions (I tend to drive people a bit nuts with all of my questions, but then I'm trying to learn about things as well, it's part of the hobby.)

Ultimately, trust is better, and my experience is that hams will deserve your trust.

>
>1. Is it a good radio or are people experiencing lots of problems with it.
>Please tell me the good and the bad.

I think it is a nice little radio. Its main charm is that it *is* little, IE it
won't do anything a larger radio can't do, it just does it in a smaller
package. The itty bitty speaker doesn't have much output, so it can
be a problem in a noisy area. And it doesn't have a touchtone pad,
though you can pre-store numbers in a dialing memory. There is
some IMD, as expected in a radio too small to have proper front
end filtering. It does have a wide frequency coverage, which can
be of novelty value, but does add to the IMD problems. It isn't well
designed to be a scanner, though it does scan. Etc.

If you need or want the very small package, then it is a good buy.
Otherwise you might want to opt for a larger and more powerful
radio.

>2. How far can a half watt actually transmit (in miles). Anyone with
>experience with the radio, your transmit experience and range would be
>greatly appreciated.

Half a watt can transmit several billion miles (Goldstone is still receiving
Pioneer 10, and it is beyond the orbit of Pluto). OTOH you might not be able
to reach someone a hundred yards away if the terrain is unfavorable. This
is really a meaningless question. Low power VHF/UHF operation depends
on line of sight. If you've got it, then there is virtually no limit to the range
you can achieve. If you don't, then you're hosed.

In practical terms, there is a repeater 5 miles from here that I can't hit at
all with the VX-1R, but there is another 20 miles away that I hit easily. And
the same holds true with a 5 watt HT. It is all a matter of terrain. You have
to jump up to the 50 watt class to get reasonable coverage beyond pure
line of sight.

>This is the only radio I am looking at right now. The wife actually thinks

>wait to use either radio. Any impute would be greatly appreciated.

I think the little radio is fun to own. And you are much more likely to carry it everywhere than you are a bigger radio. But since you already have a HT, I'd be hinting strongly for a 50 watt class mobile rig. That's a much more practical radio for use in either the car or the house than any HT. About the only real use I get out of a HT is at a hamfest to keep in touch with my buddies, or used with the mobile rig in crossband mode as a sort of wireless mic.

HTs are *not* general purpose radios. They are specialty tools for foot mobile operation. You are much better served by a 50 watt class mobile rig for most operation. Especially for operation in a moving car, the other folks on the repeater will thank you for not subjecting them to listening to a handi-scratchie fluttering in and out of the passband.

It does have some firmware drawbacks (very limited ability to scan multiple bands in the same set of memories... the entire implementation of memories is crippled somewhat compared to other products), but if you want to use it primarily on one band or another and can deal with selecting bands (rather than just memories) to move between your bands, it's OK. The ad copy talking of many groups of many memories is rather misleading.

>package. The itty bitty speaker doesn't have much output, so it can

But the output it does have is pretty clean, compared to the standard C108.

>some IMD, as expected in a radio too small to have proper front

It is very dependent on the duck antenna they supply to reduce IMD; the stock duck antenna is itself pretty selective to reject frequencies above the 2M band.

...

>Half a watt can transmit several billion miles (Goldstone is still receiving

Here in Colorado, where our repeaters are thousands of feet above flat terrain, there is *no* penalty for the lower power level. I routinely can access repeaters 50 miles distant.

...

By the way, the AC charger is MUCH BIGGER than the radio. Something to keep in mind if you travel alot. I don't see how Yaesu could have made the supply so large considering that it's just a 6 VDC voltage regulated current limited AC supply.

This is another case of Radio Shack doing something right, and catching hell for it. On the VHF/UHF handhelds, the radio is dropping the CTCSS tone before the RF drops out. Thats why you don't hear the squelch tail on the end of a transmission from a RS HT.

Dan,

Thanks for the note. I rerouted the coax--no better. I then used a long extension cord to plug the computer into another room--noise level dropped from S9+ to S3. Removed the cord and plugged it back into the original outlet and the noise returns back to the S9+ level. So, we know it's power related. Any ideas on a way to reduce the noise backfeeding onto the power line? I wonder if one of those electrical noise filters could be placed on my Aston 35's power cord? I figure the power supply can draw about 4.2 amps. (35 amps * 13.8 volts = 483 watts | 483 watts / 115 volts = 4.2 amps). Any thoughts?

>amps). Any thoughts?
>
>73 de Tom

Great Tom,

My next step would be to install the filter on both the Aston, and the PC. Next get yourself a circuit tester for your house wiring to make sure your outlets are properly installed. If the wiring is not correct it can cause line noise. You can get a circuit tester from Lowes, or any home improvment store.

73, Dan

Dan,

Thanks. I took the computer apart and disconnect the CPU cooling fan--no change. I disconnect the motherboard and the noise decreased some. It appears that the power supply makes more noise as the load on it increases. I'm considering buying another power supply--just need to plug it in and listen to the radio. I wonder who makes a decent Computer power supply...

You mentioned filters for the AC plugs on the Astron and Computer. Where can you get these filters? I've heard of some for major appliances but never had to look for one.

I have an AC outlet tester (somewhere)--I'll check on that over the next day or so.

Tom

Try putting Iron Ferrite Toroids on all all cables leaving your
computer. They will help if not eliminate much of the RF generated by
the computer. Radio Shack has them they are split retangular iron
ferite with a plastic retainer. They come two to a package and cost
about 5 bucks for two.

Source record: 159389

I have a great entry level radio for both voice and CW. The PS is a 20 Amp, 12V supply. I also have an electronic keyer and Bencher Paddle. Radio is portable on 12V auto system. I have home brew digital frequency readout with it. Al can be yours in time for Chistmas... only $400! Trap vertical antenna system separate, new, only used 6 months-- $200.

Can ship fedex or UPS. Questions are welcome!

Kevin

It makes it much easier to program the radio, you get a screen that shows all the parameters for each of the memories. You can save the file and down load it to your ft-51. You can make up profiles for the radio unique to different geographic areas and store them as files in your computer. If for example you know your going to be in Rochester NY you can call up the file for Rochester that you previously made or got from a buddy and down load it to your rig in a matter of seconds. When you return you can download your original profile. It just saves a whole lot of fat fingering of freq from the face of the radio.

Source record: 159420

Someone help please.

I just recently (last Sunday) passed the test for my amateur radio license. When the VEC examiner gave me my certificate, he said that they didn't use electronic posting and that my call signe would probably be available on the QRZ web site in about a week. OK.... I know that I am not licensed until the call sign is posted by the FCC. I understand that perfectly. BUT, can I BUY a transceiver now? I noticed that a lot of magazines want your call sign in order to purchase a radio. Does my neat W5YI VEC Examiners certificate, all signed and filled out help any? Do I have to wait until I have my call sign before I can buy the radio? My wife wants to buy me a new radio as a Christmas present, and I'm not sure she can buy it without the call sign.

Can someone shed some light on this issue for me?

Regards,
J.R. Smullen
Call Sign TBD :)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-12 00:00:00 UTC
From: acorbin@roanoke.infi.net
Message-ID: <66q6eg$ai7$1@nw003.infi.net>
Source record: 159426

I
>I just recently (last Sunday) passed the test for my amateur radio
license.
>
Congratulations.

When the VEC examiner gave me my certificate, he said that they didn't
use
>electronic posting and that my call signe would probably be available on
>the QRZ web site in about a week. OK.... I know that I am not licensed
>until the call sign is posted by the FCC. I understand that perfectly.
>BUT, can I BUY a transceiver now? I noticed that a lot of magazines
want

That depends on that particular vendor. Some do and some don't. It is
not required by law or FCC reg, but some vendors will not sell to someone
without a license.

>your call sign in order to purchase a radio. Does my neat W5YI VEC
>Examiners certificate, all signed and filled out help any? Do I have to

Again that would be up to that particular vendor. Perhaps if you
explained the situation and offered to fax them a copy of your
certificate of passing, they might accept that.

>wait until I have my call sign before I can buy the radio? My wife
wants

Best regards,
Andy

1169. FS: VERY RETRO AMPRO 1950'S REEL TO REEL

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-12 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <66qeobkoj4@csu-b.csuohio.edu>
Source record: 159430

FS: VINTAGE AMPRO REEL TO REEL RECORDER

A CLASSIC COLLECTABLE VINTAGE AMPRO REEL TO REEL RECORDER

AMPRO CORP MODEL 758 TWO SPEED HI-FI REEL TO REEL TAPE
RECORDER -- MID 1950'S IN NICE SHAPE & EXCELLENT WORKING
ORDER

- GREAT 1950'S ERA BEAUTIFUL STYLING & DESIGN WITH:

* COCOA BROWN CONTROL PANEL & GRAY KNOBS/BUTTON AND RAISED
GOLD AMPRO LOGO.
* MATCHING COCOA BROWN CARRYING HANDLE AND AMPRO LOGO
COVER LATCH
* HAS GRAY SHARKSKIN CASE WITH FULL-FRONT BASKET WEAVE
SPEAKER GRILL. Just a great looking unit if you're a
1950's buff & love that styling.

- GREAT UNIT FOR REEL TO REEL COLLECTORS OR FOR SOMEONE
WHO JUST WANTS A GOOD OLD FASHIONED HIGH QUALITY MONO
UNIT.

- HAS ORIGINAL SHURE MICROPHONE MADE FOR AMPRO (MODEL #189).
IT'S ENAMELED TO MATCH THE REEL TO REEL AREA SHEET METAL
OF THE INTERIOR -- A NICE TOUCH BY AMPRO CORP.

- Ampro made high quality tape recorders in their time and
seeing this unit is an example of it.

Great sounding and EXCELLENT running unit for it's age.

The interior panel is like new and the case shows some wear, but
very minor for a unit of this age. We're talking about 40+ yrs!

- SIZE (APPROX.)

16 5/8" WIDE x 10 5/8" HIGH x 16 1/4" DEEP

- WEIGHT (APPROX.)

38 pounds (fan cooled) TUBE POWERED

CONTROLS:

- Dual 3 3/4 & 7 1/2 IPS tape playing speeds.

- Green Eye Tube Recording Level Indicator

- OFF/Volume Knob

- Treble/Bass Knob

- Buttons
* Record & Lock
* Forward
* Rewind
* Play
* Stop

INPUT JACKS

- Radio/Phono

- Microphone

OUTPUT JACKS

- External Amp or Speaker

- Remote Control On/Off Switch & Plug

Handles 7 inch reels.

Plus shipping and handling which won't be much, because I'll pack it free (the buyer will save there). To take it to a professional packing place can cost quite a bit--I hope you agree. Also, to show my gratitude to the buyer, I'll bring it directly to UPS instead of using a local private shipping store which marks up the UPS shipping costs 40% to 60% which is the practice for these stores in order to stay in business.

The asking price is $150 or best offer, since this unit is in fine shape and not what you would normally expect for a collectable vintage unit. The fellow I bought this unit off of refurbished the mechanicals (his hobby) and gave me a copy of the SAMS PHOTOFACT FOLDER he used with it to work on it. This edition is for the Ampro 757 & 757-A, but is close enough should the unit require maintenance in the coming years. I'll throw that in too.

I can email a color photos of the unit for your review, if you wish in the .jpg file format. If you can handle a zipped .jpg file let me know.

Thank you.

I am new to Ham radio and have not passed my test yet, but my wife wants to know what I want for Christmas and I am thinking of asking for this radio. I have a Kenwood TH-22AT 5W which I really like. I just think this VX-1R is kind of a novelty radio, but I still like it. The questions I have are:

1. Is it a good radio or are people experiencing lots of problems with it. Please tell me the good and the bad.

2. How far can a half watt actually transmit (in miles). Anyone with experience with the radio, your transmit experience and range would be greatly appreciated.

This is the only radio I am looking at right now. The wife actually thinks its a neat little radio and she doesn't know anything about radios. I just bought a bigger hand held in TH-22AT and if I ask for one of the same size that will cover the same frequencies my wife will not buy me one because she thinks I already have one that size (no concept of what radios are). She thinks the Yaseau is cute and I think is going to buy it for me weather I want it or not. I am taking my test the second week of January and can't wait to use either radio. Any impute would be greatly appreciated.

Tony

Hi, I made programming software for Yaesu FT-50 and VX-1.

To use it, you will need
- Linux computer (tested on i*86)
- Connection cable (e.g. from ADMS-1C or ADMS-1D)

Please note that this is ALPHA test software. Use it at Your own risk.
Feedback is appreciated.

Software can be obtained via anonymous ftp from

ftp://ftp.funet.fi/pub/ham/rigctrl/linux/yaesu-0.1alpha.tgz

It contains full sources and protocol and data descriptions.

I think it is a great little radio. I've had mine since September and have
had no problems
with it yet!

>2. How far can a half watt actually transmit (in miles). Anyone with

This is impossible to answer accurately, because it depends on terrain etc.
I would suggest changing the standard antenna. Comet make one that is about
10 inches long
and it *really* improves receive coverage and help transmit range a bit too!

I hope you get one for Christmas and also that you pass your exam and get
your license.

Have fun on the bands when you do....It's a great hobby!

>Chris
>
>
If you mean is there a low level RF output for a transverter the answer
is no. I use mine to drive a MEON 6 metre transverter and I have to turn
the mike gain down and use an attenuator in the transmit side of the
transverter. If anyone knows a better way I would also like to know.
This is the only failing of an otherwise super rig.

Looking for a good home for some of you older HAM gear?

I am looking for any broken or working Ham Radio Gear that you might
want to get rid of. I will pay shipping (or pick up in northeast).

I am also willing to pay modest amounts for newer non-working radios.

I'm interested in reparing and rebuilding older tube type radios,
especially AM rigs, tube type receivers, broken all mode VHF/UHF rigs,
and broken pre-amplifiers.

> 73 Dave WB0GAZ dgf@netcom.com

Actually this may be easier than you think. I've done something similar
with my Icom 706. I wrote a program that controls the radio from my
computer. Then I used PCAnywhere32 (which is available for free if you
just want to do this simple type of application) and controlled the
radio over my network link from my office. For communicating audio,
just use the sound cards, as you suggested, and internet phone as a
conduit for the audio. PCAnywhere could be faster, but this technique
will work.

73,

John W2FS (ex-WA0PTV)

Phil:

There are comercially available units to do this. Understanding your
needs, I'd still op for a true portable repeater. Using surplus parts, a
portable repeater can be built for <500 bucks. In the mean time, have
you considered using a dual band HT with 'repeat' for communication
"over the top"?

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,

I am a new radio amateur, living in Haifa, Israel.
My license restricts me to 15 Watt max power, Morse tranceivers only.
I would like to buy such a tranceiver.
When I posted this message some months ago, I received only offers to
sell 100W max power, but I am not allowed to use such a device.

I would like to buy such a device. Please contact me by phone, because I
don't usually subscribe to this group.

Source record: 159246

Jefferson Search and Rescue operates in the Olymic Mountains of Washington State. Often when a team is on the other side of a ridge or down in a valley, a relay is dispatched to an opposite high point in order to maintain radio communication. The relay operator receives traffic from one team and then repeats it to base camp or another team.

We have often thought that a portable repeater would be very useful but haven't seen appropriate equipment. When Bud Johnson, w7tca@olypen.com, and I discuessed this at the last ARES/RACES meeting, he said - why can't you just digitally record the transmission and then retransmit it. Pursuing this idea, it sounded pretty good. Only need one portable radio plus a store and forward controller. Receive and record until reception ended, then transmit the recorded message. The first party transmits their message, hears it retransmitted and then after a delay, hears the other party's message retransmitted.

So here's the question to rec,radio.equipment - has anybody done this or have an idea of what equipment it would take? We would appreciate any and all ideas.

Thanks and 73

Try disconnecting the monitor from the rear of the computer. I have found that the interference invariable comes from the monitor, not the computer. Switching the monitor off usually makes little difference, but disconnecting the connection to the computer does. If this cures the problem, try ferrites on the cable. Sometimes it is necessary to open the monitor case and put the ferrite bead right at the pc board. Good luck. KB7FA

Don,

I have had a TH79 for a few years now. The small size of the HT is a nice feature. However, the radio does seem to suffer from intermod problems, and I have always been frustrated with the low power output. I would strongly recommend the highpower version. I've found the controls and programing to be pretty straight forward, but have never used more than a few of the features.

Good luck,

Rick

1199. Kachina 505DSP on a LAN

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-13 00:00:00 UTC
From: dgf@netcom.com
Message-ID: <dgfEL4wp4.EGz@netcom.com>
Source record: 159251

I sent an e-mail to Kachina to find out if their 505DSP HF transceiver could function completely on a LAN. The idea was that the radio and it's computer would be in one location, and the user and the speaker/mic/ptt/etc. would be on another computer in a different location (presumably using a sound card as the user's voice I/O).

Anyway, turns out it is not supported; the Kachina is essentially a regular HF rig with a RS-232 port instead of a front panel. The rest of the I/O (mic, spkr, ant) are independent I/O connections. Also, the client software is not directly networkable.

However, I think there is a possibility of achieving this anyway by having a separate network application use a sound card at each end to move the audio across the LAN, and something maybe with a parallel port pin to move PTT around.

Is anyone out there a good windows network programmer that could pull this off?

Also it occurs to me that the controls interface being RS-232 might be easily reverse-engineered (or they might even publish the protocol), which might allow for alternate front-end operating system to be supported (such as LINUX on a TCP/IP system). That in principle (ingoring the regulatory issues) might lead to a HF rig "server" on an internet web site.

Any thoughts?

1204. FT920 mod info ????

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-13 00:00:00 UTC
From: airnig@gmtnet.co.uk
Message-ID: <3492b8e6.18940100@news.gmtnet.co.uk>
Source record: 159256

I have here a set of 5 files, that are supposed to perform the Eprom rewrite on the FT920 to allow open TX.
The files are:

att0272.doc 3,315
att0274.exe 39,882
ft920mod.txt 1,922
ft920 adjustments.txt 1,417
gen-tbl.txt 344

The mod requires a serial connection to the CAT connection on the FT920, and a keyboard entry sequence to get the set in engineering mode before starting.

The text and att0274.exe file make reference to a file tx0734v.exe, which I do not have.

On running the att0274.exe file (unconnected to rig), the title page reads :

"A0734 outside tx table write program ver 1.00
Dos/v by micro system design T.Warabikawa"

THERE IS ALSO SUPPOSED TO BE A ROGUE PROGRAM AROUND THAT WIPES EPROMS AND REQUIRES A NEW EPROM FROM YEASU!!!

Has anyone does this mod successfully, and if so are these the correct files???. Do I need TX0734v.exe???

Also has anyone been caught out by the duff files in circulation, and if so are these the rogue files I have ???

Please email me before you attempt this mod yourself, and I will pass on what I have learnt.

Cheers and Beers
Nigel

Tried disconnecting the monitor as you suggested--no change. I'm still leaning towards the PS (voltage regulating circuits) as the problem. I opened the case and disconnected the power from the motherboard--saw a slight decrease in the noise. I'm going to open it up again and disconnect the power to everything. I plan on attaching only the power cord to the PC and turning it on. This should isolate the power supply from everything else. If the noise stays, I think I will have found the noise generator. If not it's got to be the new IDE CD-ROM as the HDD and FDD came from an older case that had no RF problems. In fact, I'm considering swapping out the two power supplies as it would cure my problem. But, since the kids have the older PC, I'll still have it in the house generating noise all over 40, 80, and 160 meters. I've got a European television that generates noise all over 20, 15, and 10 meters. I always know when the kids have it on! (They always have it on whenever the rare DX is just above the noise floor!) Do you have a source for the beads you mentioned?

Source record: 159259

Hey Folks,

I had lots of noise from 2 new PCs. Both of them had noise coming from the switching power supply. Switchers have always been notoriously noisy, and as computer prices lower so does quality.

On both PS there was a PI filter (I think it was a PI) on the PC board that had not been populated. Take off 2 caps and an inductor save a buck on costs. That's a lot for a manufacturer and in 99% of the users it makes no difference.

I added a Corcom filter to each supply and made a significant improvement (4 to 6 S units). Using star washers between the computer chassis and cover helped a tiny bit also.

Regards,

George (KQ4QM)

You can get 420-450 coverage by removing the plastic door on the side,
the card inside and cutting the green wire which will be exposed. Reset
the microprocessor after doing this.

The most complete mod info I have seen for the TH-79 is at ftp.hamrad.com
in /mods/kenwood/th79mods.zip. This is a series of scanned pages from
what looks like a Kenwood document. This shows all the diode change mods
and more.

Hi John:

I've owned the TS850S since they came out. Have thought
about upgrading to an 870. Could you tell me:

1. How do the receivers compare. Specifically, how does the
DSP filtering compare to an 850 equipped with dual 500hz
filters and the 1.8 Khz SSB filter?

2. How does the DSP QRN reduction system really work? Does
it meaningfully reduce the background noise?

Any other thoughts on the 870 will be gratefully listened
to. None of my friends has one, so I haven't had any
opportunity to really use one.

Seems like a long and involved way to get the 10 watt signal out on the IC-706 MK II.
There was a guy who said he built a simple circuit that plugged intot he Antenna Tuner
connection and this allowed him to press the tune button and put out 10 watt carrier .

There is a better mod for GEN TX transmit. It has been posted on this
newsgroup many times. It involves simple pushing of
buttons on the front panel and turning the VFO knob. No wires to cut or
opening up the radio. I have not tried it but have not heard bad things
about it. Look in DEJA NEWS for it. I have it somewhere. I also have the
older software/computer mod
that has worked in 5 guys radios and one guy says it ruined his EPROM .
Perhaps he did it wrong or the software only works
on certain serial #s. If I were you try the "pushbutton mod" that has ben
posted. It has something to do with menu 33 .
Cheers, Austin Powers

Austin/Ken - I came across this mail recently which may be of interest
to you. I havn't tried it myself but it may be worth playing with:

Subj: IC-706 AH-3 connector
Date: 97-11-04 04:51:33 EST
From: jtn@te-cats.COM (John T. Nogatch)
To: jdonimi@aol.com

I investigated the AH-3 connector on the IC-706 so I could
make the TUNE button do something useful without an Icom tuner.
Eventually, I came up with a small circuit which plugs into
the AH-3 connection, and fools the IC-706 into thinking
there's a tuner connected. The TUNE button now puts it
into 10w CW keydown mode until pressed a second time,
regardless of the mode setting. I find this a great convenience.

The 4 pins are:
. ground

. 12v fused for 0.5a (?)

. TSTRT normally high, this pin pulses low twice when the
TUNE button is pressed, telling the tuner to start or stop.

. TKEY normally low if no tuner connected, in which case the
TUNE button is non-functional.
TKEY normally high is tuner is connected. After receiving the
TSTRT signal, the tuner may assert TKEY low to key the
transmitter.

I don't remember which pin is which. After I got this circuit working,
I concentrated on making QSOs.

Note that the AH-3 connector doesn't work on 6m.

1219. IC-706 Auto-repeater offset! (Was Tuner Button)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-13 00:00:00 UTC
From: Scott Gray <comm5@pacbell.net>
Message-ID: <3492E2CE.5F27A9D8@pacbell.net>
Source record: 159271

Nice IC706 feature upgrades:

Stuff ICOM wasn't thinking about while designing the 706 and 706MKII..

KO6YD Designs.
dwestvik.sbm@lnn.com
916-728-4359
http://www.calweb.com/~westvik/ko6yd/

He has a very easy kit that uses a single 8 pin PIC on a small internal or external mounted PCB you can now have AUTOMATIC repeater offsets for 10, 6 and 2 meter bands! Work's on Narrow FM mode only and is activated by turning off the "narrow" filter from the front panel (doesn't really shut-down the filter). 6 meter offset is selectable. Cheap (30 to 40 bux maybe a bit less, w/ instructions in KIT form.) Easy construction ALL (five) components included - non destructive install (nothing gets cut). ARRL Bandplan.

Also, Some other features INCLUDING some stuff related to the Antenna Tuner thread.

Easy and much less difficult to QSY about the VHF bands....

Should work on the MK-II w/o any changes.

Go here:
http://www.calweb.com/~westvik/ko6yd/

>along.

First off the A and E indeed stand for America and Europe.

There are a few differences between the 32A and 32E.

For one the European version has the 1600hz tone burst required to
open certain repeaters over there.

Second the "unlocked" xmit freq range is different

American is: 144-148 mhz and 440-450 mhz
Europe is: 144-146 mhz and 430-440 mhz.

Using the American radio in Europe is not a problem as long as you
have obtained authorisation from the host countries you are visiting.

I have personally used my radio in the UK during a visit last January
with no problems at all using the call m/ve2vfd which the UK's
version of Industry Canada assigned to me.

Just make sure not to xmit out of their assigned band! 146-148mhz in
the UK is used by the Police!

Message-ID: <3493033F.3B8CCE5@ix.netcom.com>
Source record: 159288

It is a start but I don't want to wreck the radio. I think it is a shame Icom didn't allow
the users to enable the tune button to put out a 10 watt carrier. I had a Kenwood TS-440
with no antenna tuner in it. I set up the radio to believe there was one installed. It was great...simply press the tune button for 10 watt carrier and hit it again to stop.
For some reason you can't "fool" the Ic-706 MK II into believing you have a tuner when you really don't.

1242. ICOM R71A power supply fix

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-13 00:00:00 UTC
From: pierfelice <pierfelice@NoToSpam.MCI2000.com>
Message-ID: <01bd0764$ed2e4b00$LocalHost@default>
Source record: 159317
Cross-posted to:
rec.ham-radio,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.shortwave

My R71A had power supply trouble as many have had or will. The design of the supply results in poor regulation and AC ripple on the supply output. My solution was replacing the active components with one ECG1954 low dropout 12 Volt 1Amp 3 terminal regulator. The ECG1954 requires but 13 Volts at it's input to function unlike other 3 terminal regulators that require about 16 Volts (such as the 7812). The ECG1954 is a TO220 case as was the original pass transistor Q1. Cost of the ECG1954 was $5.
Basic steps I performed:
1) Remove the regulator unit from the radio.
2) Remove the PC board / transformer from the regulator unit frame.
3) Remove everything on the PC board except
C11,L1,F4,D1,C3,C4,C5,C6,C7,C9,T1
4) Install the ECG1954 where Q1 used to reside. Note that the mica insulator is no longer necessary on the heat sink and can be removed for improved heat transfer.
5) You will have to jumper the input and output pins of the ECG1954 appropriately. Add a jumper from the cold end of the fuse to the ECG1954 input. Jumper from the ground side of C7 to the ECG1954 ground pin and jumper the ECG1954 output to the radio's DC input. I removed J2/P2 from my radio.
6) I also glued a rubber grommet on top of T1 to contact the bottom cover and reduce vibration induced in the cover from T1's field.
7) Put the radio back together.
Note that this fix may not work with other than "bare bones" R71's. Mine does not have the crystal heater, FM, remote or any other option. The radio uses almost 1 amp as is and radios with more options may require a second regulator.
How does it work? Great! Even though the radio was designed to run at 13.6 Volts, mine runs fine at 12. No hum and stable down to 105 Volts line. I also installed an International Radio (WWW.QTH.COM/INRAD) Fox-Tango CW filter at the time of this modification and I am very happy with the filter's performance.

From: "J.R. Smullen" <maccpl@geocities.com>
Message-ID: <01bd0767$d7d61780$5ae330d1@maccpl>
Source record: 159319

Greetings,

I'm about as green as you can get to this hobby, my call sign hasn't even been posted yet. But I am the proud owner of a new ICOM dual band IC-W32A. It was a tough choice and I struggled between the Kenwood TH-79a(D) and this baby. But I bought it. One of the things I DIDN'T like about the ICOM was its antenna. It looks a little on the flimsy side. I'm not challenging its performance (won't know that for a few more days), but it does look like it could bread at any time. THEN I opened the manual and saw that the manual was for both the 32A and the 32E. What I thought, was this 32E? I hadn't seen it anywhere in my studies. AND the 32E (there were pictures of both), looked identical except it had a very sturdy looking rubber duck type antenna.

Best I can figure is this 32E is the european version of the radio. And for some reason ICOM chose to use a different antenna (number on it appears to be FA-8270C). OK so here's the question. Can I use the 32E antenna on my 32A? Where can I get my hands on one? Any ICOM finatics out there that can help me out?

Cheers and Thanks in Advance,
J.R. Smullen

As far as I can tell, the antenna that comes with the 32A works fine,
but MFJ and others make replacement antennas that are taller and have
somewhat greater gain.

Your note does bring up a question that does bother me. What exactly
are the differences between the 32A and 32E? In particular, what
problems will one have if one tries to use the 32A in Europe? I will
be spending some time in France, and I was planning to take my 32A
along.

>in mind if you travel alot. I don't see how Yaesu could have made the supply
>so large considering that it's just a 6 VDC voltage regulated current limited
>AC supply.

This is an interesting point.

I guessed that Yaesu had problems with a switching version so, at the
last moment, they ditched it in favour of a linear PSU. One of the
selling points of the radio is that you can get 1w on tx if connected to
the PSU. I wonder if they encountered dirty tx output with a switching
PSU connected? Or perhaps problems with the AM broadcast reception?

Austin,

I have a IC-706MKII and assume you want a 10 watt carrier to tune up using a outboard tuner or amplifier. Presently what I do is go into the "RTTY" mode, set the power control to "1" and key the mike. This will give you approximately 10 watts or 10% of full power output. I use this method to tune the rig to a wire antenna through a MFJ tuner. If you find a way to do this with the "TUNER" button, please let me know.

I have a Uniden bc200xlt handheld scanner
for sale. It works perfectly, looks almost new.
It has the resistor cut to open up cellular.
(never tune cellular, neither would you, right?)

I got a new table top scanner and don't use the
handheld anymore. Comes with battery pack
and charger. I'll ship anywhere for $170.

Thanks... Mike..

Source record: 159148

I had the a similar problem years ago in the 386 days. I started unplugging cables from the computer while it was on (monitor, keyboard, serial ports, phone line, etc.) and found a great deal of the noise was being radiated by those cables. Some snap on ferrite cores helped reduce that. I also bought a better case, which had more metal in it, and what little plastic there was (front panel) was painted with dag paint and grounded.

Overall, I still had some computer noise, but I reduced it 10 fold and was able to conduct a reasonable QSO with the PC on.

SELLING my HT's

I have (2) Radio Shack HTX-202's . They come complete with battery and charger.
they cover the 144-148mhz range and are NOT convertable to other frequencies.
One of the radios I am selling is as is......the radio, battery, antenna, charger

The other comes with all the above plus a homemade deskstand, mic, and a mobile
quarterwave antenna.

the first radio is $160.00 shipped.

the second radio is $ 180.00 shipped.

the 3rd radio I have is a Yaesu VX-1. it is unmodified. I have the original antenna, but also bought the comet dualband antenna, because of the better gain, and receive characteristics. It comes with (2) Lithium-ion batteries and the charger and an extra
battery case in which you can insert a regular alkaline cell into for when your other batteries are kaput. the Lithium cells charge in about an hour with the wall transformer.
the radio does have a small scratch on the clear faceplate about 1/8 inch, but it is off to the side and does not obstruct the view of the readout. it is almost unnoticeable.$ 285
shipped.

reason for selling, is that i am preparing to move and need the cash.
you can reach me at KB2QQM@MSN.COM or at 518-383-8655 in Albany, NY.

Consider this: programming 70(35 VHF and 35 UHF if you have the radio in
alphanumeric mode) channels, CTCSS(PL tone) codes, strange offsets,
power level settings, all the bell-and-whistle options, etc. by hand.
Consider doing a Memory Wipe and Reset of the radio and programming all
that info in, again by hand.
Now consider plugging in the programming cable and using the programming
software to load the RDF file of your choice (you can have different RDF
files for different regions of the country, different public service
events, etc.) containing all the above info.
Unless you don't have access to a Win 3.1 capable computer, the ADMS
software and cable is well worth the money.

How hard is it to replace the SSB filter in the FT-920?? Is it similar
to the FT-890 or
FT-900at where you had to "CAREFULLY" take out the stock filter without
trashing the main PCB ??? This task is not for the "FAINT OF HEART". I
have been a tech for many years and still haave goosebumps thinking
about it. I LOVE THE 2.1 KHZ FILTERS
from Inrad.

One more thing. If you get the 1.8 KHZ filter for the FT-920 then you have to take out the 2.4 wide filter and then have to live with the NARROW 1.8 KHZ filter ALL THE TIME. I Strongly suggest getting the 2.1 KHZ filter. I left mine in all the time and lost only marginal fidelity.
Cheers, Austin Powers

>Good, when are you going? Their loss will be our gain.

Maybe the Netherlands is freer in some respects. However, firearms laws
are much more restrictive. Example: A business associate from the
Netherlands was surprised at all the guns and ammunition sales around
here. He is a small-game hunter. He must store his gun at the police
station, sign it in and out, and if one of the clerical folks messes up on
the paperwork, he is held responsible, not the clerk who made the error.
Now, I do think the Dutch are much freer about sex, drugs, and rock 'n'
roll!

1288. Kenwood TS940 PLL Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-14 00:00:00 UTC
From: appld@sk.sympatico.ca
Message-ID: <671c8f$9ao2@dragon.sk.sympatico.ca>
Source record: 159163

I have the usual pll problem with my TS-940. I have removed the pll board and found that it has a black piece of foam material under the VCO consisting of L34, 26, 27, 28 and 29. On removal, the foam came apart and fragments are sticking to the circuit board. Along with this, it appears to be coated with wax from the potting material.

The question is, does anyone know of a good, save method of removing the black foam residue and the wax from the bottom of the board. It does make inspection difficult, even through a glass.

I also have a wax problem underneath the VCO consisting of L14, Q5,6,7,8, and 9.

Also, when I reassemble the unit what kind of foam should I be putting underneath the first VCO mentioned above??

Thanks and 73

Message-ID: <349436DB.5A81@hnvr.com>
Source record: 159164

I've acquired a nice Motorola MX340S UHF handheld that I would like to program with some different frequencies. I haven't checked yet, but I'm guessing the local Motorola shops will put a real hurt on my wallet (making the radio about as useful to me as a brick).

Has anyone here devised a way to program these radios "amateur" style? Something like drilling a hole in the top of the program module and interfacing a standard EPROM? I have no idea what the programming code would be- other than the fact that it shifts two 8-bit words per channel, and then powers off the PROM. Any info appreciated.

1293. ICOM Cloning Software for the IC-W32

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-14 00:00:00 UTC
From: "J.R. Smullen" <maccpl@geocities.com>
Message-ID: <01bd08d2$5fabf060$0736e2cf@maccpl>
Source record: 159168

Greetings,

Just got a nice shiny new ICOM IC-W32 the other day. One of the reasons I selected it in lieu of the Kenwood Th-79 was the cloning software. But now I'm not too sure. My software appears VERY BUGGY. Sometimes when I save a configuration and then return to it, the VHF frequency assignments are different than they were before. The lower group of frequencies are now assigned to the bandedge pairs. This is not a GOOD thing. So far, I've been able to recover by downloading from the transceiver to get a new start, but that's not the way this is supposed to work.

Anyone else had problems with this software? It's dated June 2, 1997, so it appears to be a relatively recent version. Any help would be much appreciated.

Do you have a metal case? If not, try to shield the inside of the case with
foil or spraying any of it you can (or get a metal case). I also bonded all my
drives, MB gnd and PS case together with the case and connected it to the
station ground.

You know, ever since they let the Codeless morons into Ham Radio, the hobby really has gone downhill. Do you know how many of the people on these frequencies have a class of license that permits them to actually get on those frequencies?

Thank you ARRL, thank you EIA, thanks all of you money hungry bastards who run the local Ham Radio outlets for your part in the action to get more Hams licenced. I'm only glad to say I was around Ham Radio when it was a fun hobby, and that was less than twenty years ago.

Hi Everyone

A friend of my is thinking about setting up a
40 meter BBS. The problem is he's only a Tech Plus,
when I got my novice ticket in 87 novice could only
run CW on 80,40,15 meters and SSB on the lower part
of 10 meters. He was told by the FCC that as long
as he transmits in the 40 meter novice part, digital
mode was ok. I dont think this is correct !

If you happen to know weather he is correct or not please
e-mail at n3qom@netusa1.net

Thanks Carl

Howdy Dude--

Are no-coders the problem, or are you scape-goating on the basis of a convenient assumption? Alcohol and drug abuse--along with anti-social and outright predatory behavior--are present at all IQ levels, and in people with both good and poor coding skills. If someone is really driven to act like a flaming asshole, they're probably going to do it--no matter what their morse code speed is. In fact, I'd be willing to bet some of the worst offeders hold an advanced or extra-class license and have been hams for a long time.

If enforcement through FCC field monitoring were more efficient (as it used to be), I suspect most of this nonesense would stop overnight. Consider this--if the cops in your area kept the same speed limits, but sold off their radar guns and stopped arresting people, don't you think a few of the more loosely-wrapped folks in town might begin to drive faster and with a less decipline? I do.

I have heard there is a way to make the IC-706 MK II TUNE BUTTON on the front panel put out a 10 watt carrier. I do not have the an ICOM autotuner but want the button to tranmit the 10 carrier into a manual tuner . It is a lot easier than changing modes and then lowering the output power. Several guys say they saw this mod and one guy said he designed a circuit and it works great but he doesn't have the info handy. I think this info
would help out a lot of hams from pressing a lot of buttons to tune up.
Of course we could cough up the $500 for the Icom AT-180 tuner!

I have seen several messages with instructions to modify the Yaesu FT-50RD, but they all say to use the ADMS-1C computer kit.

I do not have the ADMS-1C kit. Even if I had it, I could use it with my Macintosh.

Is there a way to modify the radio, to get the widest RX frequency coverage (76-540 590-999MHz, with cellular), without using the ADMS-1C computer kit?

And does this modification have any known negative affects on the radio?

Thanks for your suggestions.

I use a Radio Shack speaker in my truck and it works fine. I mounted mine using the screw from the clothes hanger. Works real well. Radio shack also has an amplified speaker if you need more power. I use the standard one.
Greg Romaniak wrote in message <6727j9gdr1@antares.en.com>...
Greetings,

I have a Kenwood TM-V7A in the car. The rig sits under the passenger seat with the control head remotely mounted on the dash. I find that when the car is quiet, the audio from the internal speaker is fine -- but as soon as the windows open or there's someone else talking in the car it becomes difficult to follow the radio.

I've already decided where I want to mount an external speaker, as a friend with the same model car has it mounted in the same place, and audio is excelent. Unfortunately, the speaker is attached to the power moonroof control unit, centered just above the front windshield. Becuase of the placement, and becuase I'm 6'2", I need something very low profile so I don't thwack my head on it.

My friend has the kenwood SP-41 I think. The speaker is very nice -- but I have a hard time with spending $50 on a simple speaker. Can anyone suggest a decent quality low-profice speaker with good audio? I'd also appreciate any sources of these types of speakers even if you don't haev a specific recommendation -- a catalog would be great.

Thanks,

Greg, N8XOS

REPLY...

Actually, a radio like was described in the original message ("a low power transmitter which is able to cover a radius of 300 ft"), is not illegal, or a violation of FCC regulations.

In fact, you can buy a device like this in almost any toy store (wireless microphones for broadcast to FM radio receivers). And, with the right antenna, one of these can easily achieve a range greater than 300 feet.

If you want something more sophisticated, try the professional wireless microphones designed for musicians. Some of these use the FM radio frequencies (or can if tuned slightly), and some even offer stereo output (again a better antenna would increase range).

You might also want to get a catalog from Ramsey Electronics (716-924-4560). They offer several low-power radio kits (AM, FM, and FM stereo).

I couldn't agree more. The $150 (used) 2mFM HT is nice, but a $25 kit that
teaches some theory (as opposed to paraphrasing it in HAM-SPEAK) would
breath some life into this hobby.

Somebody sent me a schematic for a simple low power broadcast FM transmitter.
It's so elegent. Two 2222As. I put it into SPICE and have been testing it,
with the idea of altering it for 6 or 2 meters. In the process, I'll learn
more about SPICE _and_ controlling the deviation in FM.

So following this thread hasn't been totally useless.

Is anyone pulling buy, sell, swap/trade and ham radio equipment discussion traffic off the regional packet clusters and posting it close to real time on the Net?

If so, where, please?

If not, is there a "rebroadcast" regulatory reason that prevents this?

If there is not a prohibition, could someone suggest how this might best be captured to a web page and perhaps I'll do it for the more active local New England area cluster(s)!

They do publish the protocol, on their website. And you could write your
own control program. To duplicate what they offer under Windows would
be quite a bit of work, but it is certainly doable. Doing it with X is one way,
but better is probably to make it a browser applet. Adding a digital voice
stream on the network side is pretty trivial with Linux. Just using VOX
will handle the PTT issue.

At the Dayton Hamvention in 1995 four Rockland 7530B FFT Analyzers were sold - with sets of the appropriate manuals.

I just have a need to make a copy of those manuals, so if you were at Dayton in '95 you might know one of the four lucky people that went home with a Rockland unit with manuals. I'm trying to contact them, but unfortunately, the seller doesn't have any of their addresses.

Also, if anyone you know of has one of those Rockland 7530B FFT Analyzer's (It fits in a Tek Series 7000 Mainframe, into all three slots) could you have them contact me if they have the books ?

Thanks !

I have For Sale or Trade the following items:

Motorola MT1000 UHF 99 channel with charger.....$300.00 obo

Motorola MT1000 VHF 99 channel with MVA and many other accys.
very good condition, MVA is 1 year old.....$750.00
obo

Motorola MTX800 Conv./Trunking 16 channel with charger..$300.00 obo

Kenwood TK801S UHF mobiles 1-16 channel /1- 6 channel both are 25 watt. and
in good condition.....$250/$200 obo.

Please email me for information or offers: TTEMTP@usa.net

All equipment is in good or better condition and is all in excellent working
order.

I will ship to you FREE anywhere in USA if prepaid (cash or certified funds)
or COD and you cover costs. I am located in Michigan.

1367. Small dualbander dilemma

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-15 00:00:00 UTC
From: hberg@0spam.uiuc.edu
Message-ID: <674c55$5e5$1@vixen.cso.uiuc.edu>
Source record: 159055

I am looking for a dual-band HT for my wife. something with a small profile. I have a Yaesu FT-530 (which I love). She has used it quite a bit and likes it, but wouldn't mind someting smaller. Right now we're trying out a FT-50 a friend of mine lent us. She likes the size and the audio, but itsn't impressed by all the bells or whistles, most of which she will never ring or toot. I may just end up getting her a used FT-530 that's available locally, but before I make any decisions I wanted to see if anyone has experience with other radios that might fit the bill. The other advantage to another 530 is that I already have extra batteries and a rapid charger. Another radio will almost certainly mean new stuff in the battery department.

QST just did a review of "simplified" 2m HT's, but I'm looking for a dual-bander.

Any thoughts?

1370. Re: FT920 SOFTWARE MOD :::::BEWARE::::

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-15 00:00:00 UTC
From: Austin Powers <Powers@ix.netcom.com>
Message-ID: <3495C048.1192C064@ix.netcom.com>
Source record: 159058

I have BOTH FT-920 MODS. The lastest mod which has you simply push buttons on
the frontpanel in menu 33 etc.
doesn't seem to work. many people say it does. I sent the "SOFTWARE MOD"
which is a program to load from your computer to the FT-920 and heard many
people thak me for the mod and reply "IT WORKS" the only problem is it doesn't
expand the 6 meter frequency spectrum ,only the HF part 1.6 to 30 MHZ
continous and 6 mts is left alone.
I held this software back aftera fellow said he had to send his radio to Yaesu
to have the E-prom changed . Since then I have a
recieved alot of requests for the software mod. Against my better judgement I
sent it to another ham who is knowledgeable
about software/computers and he said he will take hos chances even after I
warned him! He said the other mod you have seen
wich mentions"DESTINA" doesn't work. I will not send out any more software
mods until I hear more positive results from
guys that have the mod. Incidently, I got 5 confirmations that the Software
mod worked after sending out 38 of the programs.
I got only 1 message that his radio is not working and 32 no comments. I can
only assume the mod works .

If this is the SB102 mentioned earlier in the group; $200 -250 for working good and looking good unit with the power supply. All the better if it includes the matching speaker to put the PS inside of.

Watch out for the wafer switches used for band changing. They were of inferior design (cheap), an inherent problem with most HW and SB series stuff.

When built properly and tuned up (aligned) correctly, many said they were a poor man's KWM-2. They just lacked the quality of the latter. Personally, I liked the SB series.

Sir, these performance improvements are precisely the "MODS" that were
once treasured and passed along (see ARRL Hints and Kinks).
Today, the question, "whats the mod?" has come to mean, "How do I hack
this radio in order to get on CB, Police Repeaters, Cellular Radio
Phone, Baby Monitors, or Fast Food Intercoms?" Some of these fools
actually admit that they want the modification for CB, Baby Monitors,
Volunteer Fire, McDonalds, etc. There is no longer any honor in this
question.
If MARS and CAP actually had as many members as one would assume from
this often asked question, ...
And there are a tiny number of transverter users.

Good going on finding an actual performance improvement to pass along!
73, Brian/N0iMD

1389. Re: Making a Low power FM transmitter

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-15 00:00:00 UTC
From: Cliff <teknocolor@aol.com>
Message-ID: <01bd08e3$c9fad7e0$2b1f03cf@turbopig>
Source record: 159096
Cross-posted to: alt.radio.pirate,rec.radio.amateur.equipment,rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.misc,rec.radio.amateur.space,alt.radio.broadcasting,alt.radio.digital

I don't think that I can stand any more of this rampant idiocy. This poor kid wants to know how to build a low power FM transmitter, and we bombard him/her with legalese and empty threats. What we, as a community of professional amateurs, are passing up is the opportunity to encourage a young (and obviously intelligent) mind to do some scientific and independent thinking.

The design and implementation of a low cost, low power FM broadcast-band transmitter (an undertaking that CAN be kept inside the letter of the law, by the way) is not a simple task... this has been made quite obvious by the number of replies that avoid the question altogether. I have a feeling that amateur radio has (d)evolved from a knowledge base to a toy parade... this feeling is reinforced everytime I go to a hamfest and see twenty gadget booths for every one book booth. By the way, if anyone here knows of a good, technical newsgroup that isn't a glorified swap shop, please let me know. Does anyone even open up the cases on their radios anymore(other than to scrawl their name/call on the inside)?

As for the young man/lady who wanted information on the FM transmitter, please don't be discouraged by those here who would waggle their callsigns so piously in your face. By the time that you complete your project, your working knowledge of RF electronics will greatly overshadow most of theirs. Plenty of them didn't work as hard as they say they did to earn the *privilege* of transmitting (NOT broadcasting)... the book is $14.95 at Radio Shack and can be memorized in a matter of weeks. I wouldn't usually be so hard on the hams (I'm one too...), but the callous attitude they have displayed as of late makes me a little angry.

A good friend of the family got his start in radio broadcasting with a pirate rig that he built himself and ran from his basement when he was just an 8th grader in my parent's sunday school class. A local radio station scooped him up soon afterward, and now he is a *very* successful regional operations manager for a large broadcasting company.

If you would like more info on building a LEGAL fm transmitter, go ahead and e-mail me. If you want to tell me how much Amsterdam sucks because you have to keep your gun at the police station and read all the paperwork, keep it to yourself. And if you think that someone counts as a blue collar millionaire because he owns property, do *NOT* admit it to the world. That blue collar millionaire could quit that blue collar job and still be a millionaire, you idiot.

To anyone who shares my admittedly liberal opinion, I apologize for any generalizations I may have issued.

Source record: 159101

Hi,

I have a Yaesu FTS17-A tone decoder for several Yaesu mobiles and portables. If you are unsure if this unit will work in you radio, please ask, there is a list included in the package and I can check for you. This unit is still in it's original bag with instalation instructions, although it has been opened, the unit has never been installed in any radio. Looking for $40.00 OBO, I'll ship this in CON-US

I would consider trades for;

Secure Capable VHF SaberI,IE,II,III or System Saber I or III, with or with out the DES
or DES-XL module
Keyloader for DES and DES-XL
Keyloader cable for MX series and Saber series radios

Thanx
Mike

Mike,
I'm not sure what was so "special" about the Kenwood S2001A tubes; I've used 6146B's in both the TS-820S tranceivers and T-599D transmitters. Don't know where you're at, but a "WTB: NOS/NIB 6146Bs" post might get you some leads. Check the Svetlana tube ad in QST if you want really new ones. In any event, someone else may answer with more useful info.

Greetings!

I have a set of Kenwood Twins (R599/T599) that need some work. I don't have the time to put them back on the air, and I need the space, so I'm making them available for sale.

The receiver works great and is in nice shape cosmetically. The only problem with the receiver is that the inner vernier knob slips; the outer knob works fine.

I have not tested the transmitter as yet (can do so for a buyer), but the set powers up. The transceive cable is missing, and I don't have a manual. The transmitter appears to be complete, and I'll wager that it is working as well.

I also have the original boxes. $160 shipped (the're fairly heavy).

Thanks & 73,

Tony N8SNC

1401. Looking for suggestions on speaker

Newsgroup: rec.radio.amateur.equipment

From: greg@snoopy.gwr.com
Message-ID: <6727j9gdr1@antares.en.com>
Source record: 159108

Greetings,

I have a Kenwood TM-V7A in the car. The rig sits under the passenger seat with the control head remotely mounted on the dash. I find that when the car is quiet, the audio from the internal speaker is fine -- but as soon as the windows open or there's someone else talking in the car it becomes difficult to follow the radio.

I've already decided where I want to mount an external speaker, as a friend with the same model car has it mounted in the same place, and audio is excelent. Unfortunately, the speaker is attached to the power moonroof control unit, centered just above the front windshield. Becuase of the placement, and becuase I'm 6'2", I need something very low profile so I don't thwack my head on it.

My friend has the kenwood SP-41 I think. The speaker is very nice -- but I have a hard time with spending $50 on a simple speaker. Can anyone suggest a decent quality low-profice speaker with good audio? I'd also appreciate any sources of these types of speakers even if you don't haev a specific recommendation -- a catalog would be great.

Thanks,

Greg, N8XOS

1411. MODs for HTX-202

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-15 00:00:00 UTC
From: ve5kc@qsl.net
Message-ID: <882171405.1124597765@dejanews.com>
Source record: 159118

The HTX-202 is a great radio. I own two of them and other than the the low audio from the mic and the later problem with the DTMF tones being to high, after RS increased the mic gain, I am completely happy with the rigs.

While these are not exactly mods for the HTX-202 the information may come in handy for users of this rig. I have tried to make it easier for others to do these easy adjustments, learning from my personal experience.

HTX-202 (2 Meter HT) - Adjusting the Mic level and DTMF tone levels (Radio Shack Cat No. 19-1120) (Should apply also to the Maxon 2M HT)
==========

Mic Modulation Level ---------- Most of the early HTX-202 HTs had very low mic audio. The problem is even more obvious when your signal is weak. This is very easy to fix, once you carefully have your radio apart on the table! You have to adjust VR1 on the main board. This is the one with all the larger parts, mounted in the metal frame. After you have removed the screws, carefully take the part of the radio, mounted in the metal frame out of the front plastic case. You will note that there is a flexible piece of PC ribbon cable joining the two parts of the radio. Fold the two pieces apart. VR1 is marked and there is even the word mic on the PC board. It is located near the bottom part of the board, next to 2 small PC boards standing on end. It is the one with the plastic top and very easy to adjust. If you don't have test equipment, have someone listen to your signal, while you slowly adjust the pot. If possible compare your signal with someone that has a good audio level. Now you have improved your modulation level, you will most likely have to make the next adjustment to set your DTMF tone level.

DTMF Tone Level ---------- If you are have trouble with the touch-tones on the HTX-202 HT not work with the phone patch or link control on the local Repeater, this should fix the problem.

You have to Adjust RV 1001 on the CPU board. Don't bother looking for a variable resister marked RV 1001 as there are no such markings.

Thanks to a bulletin from KA4NMX, I had a starting point to fix this problem. Here is some additional directions to help find RV 1001 and make the adjust- ment. The CPU board is in the front part of the HTX-202 case, on the back side of the TT pad. Look for a flat type battery mounted on a metal shield covering the PC board. Near the bottom, towards the speaker there are 2 small round holes which give access to VR1001 and VR1002. You want to adjust VR1001 (1K POT)which is the lower one closes to the PTT switch. Looking at them with a magnifying glass mine had markings 10 2.

(the other one is VR1002 a 47k pot marked 47 2) These controls are very small so be very careful not to damage them or ground the pot to metal shield. Not having test equipment handy I just turned the control down a little until I could reliably turn the link on and off and access the autopatch. - - - - - - - It may be better to use test equipment if you have access to it but this is "amateur radio" ... As long as it is working and is not causing any problems or breaking any regulations...

There is a mod out there that involves removing a surface mount resistor to open up the RX to something like 40-1000MHz and TX to some rediculace range. Do an internet search for Yaesu FT-50R and see what you can find. I know it's out there because I'v seen it. Try Yahoo, it usually works well for me.

Good luck,
Tracker

I agree, a low power repeater would be the best, and about the same
price as a digital recorder/controller. And you have the benefit of
real time communication. There is also a company that makes a device
that interfaces between 2 portable radios, making them a very simple
repeater. Cuold be cross band or in-band either one. Best as I
remember, these interfaces were less than a $100 ea.

I just ordered the MRP372 morse program and got a copy back via email. The program works very well. I guess it is the best that I have used so far. I really like the way you can see the code comming in and adjust the levels for best copy. I use a Mic. near the speaker and it picks up the sound very well. I am sure that it would be even better with a direct connection to the audio source. The only draw back is the copy protection. Every time you load in onto a computer you must send an email to get a new password. Real fast response on that. They are sending the manual and a disk via air mail so I will wait and see if the disk has a little better copy protection system. too bad we all must suffer for others actions. all in all it is worth the money if you need hard copy of morse code. Teamed up with a good CW keyboard it would be a killer system.....

My two cents worth! Simply go to "Best Buy", purchace a simple
FM stereo transmitter that is intended for use with a CD player to
tramsmit into your own car radio. These cost $20-30, and are simple
and cheap enough for anyone. Now learn more about it, and educate
yourself by solving the problems you encounter.

The advice from the posting above is sound. Always listen to cool-
headed reasoning IF any is offered. And go ahead and work on getting
your Amateur radio Operators License. With an inquiring mind and the
willingness to experiment, you can not help but acquire knowledge that
will bring you to the forefront of any field you wish to pursue.

Good Luck@

A good transverter and HF rig can be a joy to operate. But you need a good high performance transverter. The best is made by SSB Electronics, but there are others which are acceptable. Microwave Modules, Down East Microwave, Maple Leaf Communications, and even Ten-Tec make acceptable transverters. And of course you can build your own. Prices range from $750 for a SSB Electronics transverter down to about $100 for the Ten-Tec 2m transverter. You rarely see a SSB Electronics transverter on the used market, but the Microwave Modules units are fairly common at hamfests, the going price is about $150. I haven't seen many of the other brands in the hamfests, so I can't even guess what the going used price is.

Note that almost all transverters expect between 1 and 5 mW of drive. The IC-735 has a transverter jack, but it must have been designed to drive a transverter that Icom never decided to market because the output is only 10-50 uW. That won't even tickle most of the transverters out there. There are several ways you can fix this.

And there's another issue to address. Some transverters have a split IF, IE they have a Tx in and a separate Rx out. Others combine this transceive fashion. The same on the antenna side, some are split, some are combined. This will complicate your setup. Frankly, having a split IF is an advantage. Having a split antenna side can be an advantage too if you're using an external PA or a mast mount preamp. But if you're running barefoot, having a transceive out on the antenna side is a plus because you won't have to scrounge up a TR relay.

The best way I've found to use the IC-735 with a transverter with split IF is to do a bit of modification to the radio. Open up the radio and locate the coax coming from the transverter jack on the back. Follow it back to the main board and unplug it there. Near this plug on the main board, you'll find another coax that goes to the PA module. Unplug this at the main board and plug the transverter cable into the jack from which you unplugged the PA cable. Now drill a hole in a handy place on the back panel and install a RCA coupler (female-female chassis mount). Plug the loose end of the PA cable into this.

For normal HF operation, install a short coax jumper cable between the two RCA jacks on the back (the same way external receive is handled now). For transverter operation, unplug the jumper ends for Tx and external Rx on the back of the radio and hook your transverter to these ports. The level on Tx will be just right for almost every transverter on the market, IE 1-5 mW. Don't inject the voltage on the accessory connector to activate transverter operation, you've bypassed that. (If you want to automate all this, you could use a pair of relays back there to do the coax switching. But I find it is no big deal of plug and unplug a couple of cables when I want to switch from HF to transverter operation.)

Note, if you won't be switching back and forth frequently, you don't have to drill the IC-735. You can just move the transverter cable to the PA out jack on the main board as described above, and leave the PA cable dangling when using the transverter. Then open the radio and put the cables back when you want to operate HF. These cables are out in the open once you open the radio, so this isn't a really big deal. But if you have to do it several times a week, drill the hole and add the extra jack on the back. If you're going to jump back and forth several times an hour, add the relays.

With one of the SSB Electronics transverters, which use a transceive IF, I think the best thing is to go inside the transverter and split the IFs and bring them out to separate jacks and proceed as above. But you can use them with an unmodified IC-735 by going inside the transverter and adding a stage of amplification to the TX side (a MAR-6 works well) *after* the transverter's IF TR switching. This will allow the 50 uW from the radio to drive the transverter. Then hook up normally to the IC-735 transverter port and put voltage on the pin of the accessory connector which puts the radio in transverter mode, as explained in the manual, when you want to use the transverter.

I don't have a Ten-Tec transverter, but I think it is odd in that it wants a couple of watts drive, IE it has an input attenuator. You can jumper that out, then proceed as above. *Don't* try to throttle the main PA of the IC-735 back with the RF power control and drive it directly. The RF power control works via the transceiver's ALC, and there will be a 100 watt spike each time you key until the ALC can grab control and throttle the radio. This spike only lasts a few milliseconds, but it is likely to eventually punch a junction in the transverter. You have been warned.

Of course there is another no mod way to operate. You could operate the transceiver into a dummy load and use a 30 db coupler to get the proper level to drive the transverter. This actually works pretty well for SSB operation. (The PA isn't linear worth spit at low power, so you want to operate it fully boogy into the dummy.) Rx gets hooked to the external Rx connector on the radio as in other split IF setups. The only drawback to this method is the power you're wasting in the dummy load. That's an issue if you're operating portable because the PA drains the batteries pretty fast. It doesn't matter for home operation.

I have used the cloning software for the T2A, not the W32, but the
original version I was sent (1.02) was infested with bugs. I spoke to
the tech support person at RT Systems, the publisher of the software,
and they acknowledged the problems. After a few weeks they emailed me
a new version of the software (1.02). The update fixed ALL the bugs I
reported.

I'd contact RT systems directly and see if you have an old version of
the software. Their phone number is in the software help file. Not in
the help file is their email address: rts@rtsars.com.

> did not tell me which one). Hope this info help those of you who has
> the same radio.

I have the same radio, a TH-79A(D), but a different problem. I started
with the following diodes, as advertised:

```
o o o o x o o |
______________|
2 3 4 5 6 7 8
```

I removed two diodes and this was the final result:

```
o o x o x x o |
______________|
2 3 4 5 6 7 8
```

I removed #7 first and tried the radio. That one gave the 300-399 MHz
coverage, if I recall correctly. Then I removed #4. What I have now is:

VHF: 118-173 MHz
MIL UHF: 300-399 MHz
UHF: 410-469 MHz

Those are taken from the "VFO Prog" menu options. I used to only have
up to menu #18, but now have a 19 and 20 after doing the mod.

What I'm really curious about is this: The mod promised UHF coverage
from 400-509 MHz. I'm only getting 410-469 MHz. I tried changing the
appropriate VFO Prog settings, but it won't go any higher or lower.

Any clues?

Regards,
Charlie - N3HAZ

REPLY...

Give me a break Jean-Marie. :-)

I'm running an old, and somewhat beat up, 68k PowerBook 190cs.
SoftWindows is S..L..O..W on this machine. Perhaps when I get one of
those shiny new PPC laptops (its in my immediate plans), running
SoftWindows will be an option.

But, in the meantime, I have a shiny new radio on the way that I want
to play with now. And that is the reason I posted the question.

Now, either answer the question, or go away ;-)

Chris,

Very slick little rig for mobile / portable operation.
I run mine mobile with the control head and separation cable.
Had it about 6 months so far, no glitches.
Has very few front panel knobs and switches. Uses extensive menu system that took me a long time to get used to. Some of the more common commands shouldn't be hidden in those menus, like power output.
Operating manual is not user friendly, sparse, not especially descriptive. In fact there is at least one function on the rig that the manual doesn't address.
Requires external interface to work with many amplifiers.
Has that famous ICOM SSB transmit audio. Which means don't be lookin' for too many glowing reports on how pretty it sounds. Restricted audio fidelity on SSB transmit. Not bad SSB receive audio when using an external speaker or headphones.
The general coverage receive is not so good, especially AM.
Has pretty hot front end for VHF. FM transmit audio quality seems good.

Dec 1997 QST review nicely says it's not enough radio to be a serious home station, but okay as second rig at home. Would agree with that and add it's a pile of fun in the mobile/portable application.

73, Mike W8MKW

Source record: 158962

I got the software from Limmerads Ham Radio Store in Germany. They have a Web Site that I could look up for you. Anyways, the software seems to work fine on 3 peoples(that got back to me)
radios so fare and 33 more people got it with no comment wether it worked or not. I assume if I didn't hear back from them that it worked. There appears to be one or two people who claim their radios don't work at all. I have sent this software to a guy who
claims to be knowledgable in such matters and he will look it over try it at his own risk and report to the Newsgroup. I will not send out anymore mods etc till this guy reports
back. There also appears to be another mod that was posted that involved simply pressing buttons on the front pannel. It appears that that mod doesn't work on most peoples radios and also DOES NO HARM. Anyone who used the software mod read
that I assume no responsibility or liability afor the mod or its consequences.

Cheers, Austin

IMHO, DSP is great, but if CW is what your interested in, a good CW filter is better. In general all IF level filtering and signal processing is better than audio processing for numerous reasons.

However, the audio DSP boxes do a wonderful job of killing the AM birdies on 40 meters if your working SSB. Again, since it is audio level DSP and not IF, your reciever will still suffer from reduced sensitivity, but you will be able to pull signals out of the crud.

Sorry fo the previous post on the rig, it got garbled somewhere:

I have a great entry level radio for both voice and CW. The rig is a
TenTec 540, and has 300 watts input power. Godd for voice, excellent for
CW, great for driving a linear amp. The rig has a 12V input, so is great
for mobile or emergency applications. The PS is a 20
Amp, 12V supply. I also have an electronic keyer (MFJ) and Bencher Paddle.
I have home brew digital frequency
readout with it. All can be yours in time for Chistmas... only $400! Trap
vertical antenna system separate, new, only used 6 months-- $200.

Can ship fedex or UPS. Questions are welcome!

This package goes beyond complete. Check out the list below, both Windows and Macintosh platforms are covered, and all the accessories you could want (well, all the accessories _I_ ever wanted. :-)

Everything is in great condition, well cared for, ready to use. The Zaurus itself is in pristine condition, no scratches; it's lived in the padded leather case all it's life.

I've put the current prices from the Rupp catalog (www.mobilescape.com) rounded up to the nearest dollar) beside everything so you can see what a great deal this is.

If everything was purchased new today this would be over $1000 worth of organizer and extras,.

First $600 offer gets it. If you can't afford $600, send me your best offer, I'll consider it. Please don't send me offers on parts, I want to sell this as a bunch.

So what's it include?
Zaurus ZR-5800: 2MB RAM, Modem, Backlight, Spreadsheet, Compuserve link, Addresses, Notes, Calendar, etc. ($400)

Two Cases:
Deluxe leather case ($60)
Soft Naugahide case ($10)

2 PC connector cables ($50 each)
1 Mac connector cable ($50)
1 PC Infrared connector cable ($90)
2 AC Power supplies ($15 each)

1 MB PCMCIA Card (~$130)

Oak desk stand and stylus ($50)

Zaurus link software PC ($15)
Zaurus link software Mac ($15)

Game Pack: Poker, Othello, Mastermind ($50)

Extra (Damaged) ZR-5800, for spare parts(?) ($???)

Back-Issues of Digital Ink magazine - Tons of Zaurus use tips. (Year's subscription was $30)

Reply to the address _below_ after you've removed the spamblock spaces.

Message-ID: <677nm4$18n$1@newsfep4.sprintmail.com>
Source record: 158975

Not sure where to find the info on that but will equate maybe some relation to Enhanced 911. When someone dials 911 in a service area with enhanced capability, the phone company receives the call and the computers recognize where the call is coming from and when the call is routed to the appropriate phone the call ID info is also transmitted. So when the phone starts ringing the call ID info is also present to be read. Basically when the phone starts to ring that electronic info is at the phone that is being called. This all occurs in just a couple of seconds.....

Hi all

I am a lapsed swl who has decided to take it up again. I am looking for a good quality all-frequency desktop receiver with computer control. I was at first tempted by the Icom PCR1000 but I am beginning to think that I would prefer a 'proper' box with all the knobs etc!

From what I can see from mags etc., the best one around at the moment is the Icom ICR8500. Can anyone help with comments/recommendations etc on both units? Is there anything better around?

I live in UK, and one retailer here appears to be offering via the web new ICR7100s at 899 pounds sterling. I presume this has now been discontinued but is it a good buy? How does it compare with the 8500?

Thanks for your help
Ninian Yule

Love mine. Have had the battery problem (see my web site for more about that). Also, the audio DSP is probably not as good as an IF DSP. Sometimes you can hear someone is nearby even if you can't really hear them because the DSP cuts them out.

Otherwise, great little rig and I really enjoy it. Great for RTTY especially.

There was a lot of talk about these radio's when they first came out, are they anygood, can you get any range out of them,. Well, I just received mine this weekend I thought I would share my views with you.

To summarize, its a good radio. It has most features I could want, except a DTMF keypad, backlit keys (does have a backlit screen), and the killer, an external antenna jack. The lower part of the antenna is nice finished black metal, but the part that extends up is plain steel (or something) so hooking a clip lead on to that part and then on to the center of my coax works pretty good. It would be hard in mobile installations. I was supprised that I could get many repeaters from my living room. 340mw seems enough to do the job most of the time. And for close simplex work, the low power 50mw option will save battery life. With an external 5.5v DC it will put out 450mw. The flip up antenna feels a little loose when flipping up and down. But it also has a nice feel to it. The radio itself is VERY small. It really is just a little larger than a pager. Its runs off 3 AA's. This radio has no squelch control, and it doesn't need one. It has a monitor button on the side just under PTT if you want to hear static. I preformed the extended RX/TX mod and now I can receive NOAA weather broadcasts. Just becarefull with that soldiering iron, there's not much room in there. The resistor you have to remove is the size of a piece of dirt. For those who have not seen the radio, you can at: http://www.alinco.com/Products/DJ-S11T.shtml Well, that all I have. Thanks for reading.

Ryan

Just thought I would let you know that most 100 watt tranceivers can have
power reduced to less then 15 watts. I typically run 9 watts with my 100
watt tranceiver.
Don't know if that will help you but good luck.

Hi, I have a Westinghouse portable AM/FM/SW1/SW2 radio,model RF43W070. I'm trying to align it,and didn't get far.It calls for the tuning gang to be either open or closed.The manual shows a pic. of the tuner string,and pulleys,but doesn't explain what it is I'm looking at. Could someone please tell me what an open and closed gang means,or tell me where I could find out? Thank you.

Yes the tuning gang fully open means the tuning capacitor full open, ie
unmeshed, minimum capacitance and fully closed means the vanes fully
meshed for maximum capacitance.

This rig is very nice. Works perfectly and surprises me too!! Much narrower than youd expect and side channel rejection is super. 110 watt out, super rig. For the money, nothing else will touch it. Have manual, boxes, and will ship with regular hand mic. or with Shure 444 that works great! $475. shipped lower 48 or trade for amps newer rigs etc. Ill be glad to talk to you on it if you like, some say it sounds better than my FT 1000. Must be the tubes!! Thanks Murray

Source record: 159033

Hello all,

I've recently acquired my Technician license and I see that I've
got a great deal yet to learn.

A friend of mine has a handful of these Motorola Spirit radios for his
business (in a large warehouse). They have ten channels and operate in
the low 460MHz range. I'm curious about these:

1. He didn't need any kind of license. Did Motorola buy these bands?
2. This is outside ham space, so is it considered an out-of-band
transmission to communicate with my friend using my own (opened-up)
radio?
3. Can he set up a repeater or the like on this frequency? Just how is
it governed?

Thanks!
Mike

1507. IC-706 / CW pitch control

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-16 00:00:00 UTC
From: ddouglas <ddouglas@crossroads.com>
Message-ID: <676mbvobk1@client2.news.psi.net>
Source record: 159036

What does the CW pitch control do in the Icom IC-706? Does this adjust the CW offset on transmit?

For example, if I am receiving a CW station and I tune the IC-706 such that the pitch of the received station is the same as the pitch of the side tone does this mean that I'm now zero-beat on the received station?

Thanks!

From: Cregger <ecregger@jnlk.com>
Message-ID: <3496E0C0.DE1423F5@jnlk.com>
Source record: 159039

Having bought two Icom HF rigs that were superceded in a year or less, I wonder how long it will be until Icom announces their latest effort to destroy the resale value of the IC-756?

I'll wager that the announcement will be made in mid summer. How about you? Will it have two meters and 70 cm added in order to compete with the new Yaesu rig? Will you be able to get $1,200 for your "old" IC-756 afterwards? Don't hold your breathe.

Needless to say, I will not be in a hurry to buy another Icom HF rig. I can't afford the depreciation. Also, their transmit audio passband is tailored for women, not men.

I've been a good boy this year and Santa is bringing gifts from the candy store.

I am looking at the Timewave DSP599zx and am wondering if a DSP really makes that much difference. For CW work, I can usually hear the signal I want with my 250 Hz filter although there is some ringing. On SSB, after a couple of tries I can usually hear the signal I am looking for with the notch and IF Shift/PBT. So what I "think" I really want is something that will help with SSB adjacent signals, static (man made and lighting crashes) and those pesky AM stations on 40m.

Any comments are appreciated

1512. Yaesu FT-1000D circuit improvement?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-16 00:00:00 UTC
From: Serge Pashenkov <serge@obelix.tracertech.com>
Message-ID: <m2iusp2fed.fsf@obelix.tracertech.com>
Source record: 159041

Hi,

I got FT 1000D recently, had some questions about it, so I called Yaesu and they said that I need to do "circuit improvement" on the radio. They were pretty vague as far as what the improvement is all about, something like "sensitivity on 15M" and also "auto tuner speed", and also some other improvements ... It certainly had nothing to do with problems I had (which later appeared to be an antenna problem), but they say it's "strongly recommended". The parts are gonna be free (Yaesu says it's $350 value), but labor is not, neither is shipping (from Maryland to California and back, and you know how heavy it is), so I'm looking at a minimum $150 expense.

Question I'd like to ask is: has anybody heard about the circuit improvement, does anybody know what's it all about, and is it worth it? Any advice will be appreciated.

The radio is about 1.5 years old, serial # 3G330097.

Thanks in advance for your help,

serge

Hello all,
Does anyone have any guidelines for determining the health
of a lead-acid (or gell-cell) batterey? I have some older
batteries that may not have had the best of care and I would
like to know if there is a diagnostic test to determine if
they are good, bad, or what. Is it just voltage? If the
voltage is low after charging the battery is bad? Is there
a relationship with the amount of voltage and the total energy
stored in the battery; i.e. the lower the voltage the less
amp-hours you can get out of the battery?

Thanks,
Craig Anderson

The DSP is what you want. I've used a couple of different models
previously to great advantage - I am now going to try the NIR-10.

For some reason when the battery was low and the HT went off and then
when I put it on the display on the left didn't give any numbers (freq.
etc).
On the right side it still give the channel number. The big knob doesn't
seem to work also when I push it down!

Can anyone tell me how to solve this problem??

I have forsale a 'like new' Commander HF2500.
This amp uses two 3CX800A7s and provides brick on the key full legal limit PLUS!!

This is a killer amp but I don't have the time to spend on the bands anymore...

Asking $2200.00 with original boxes and documentation.

Shipping and/or delivery (MD/DC/PA/VA) are negotiable.

email me direct randy@mail.ameritel.net

see me on my webcam page @

Source record: 159079

Hi,
I need to change the VHF output module in my Kenwood TM-741A. The only place I know to get this is RF Parts, in California. Do you know any other place I could buy it? Could it be cheaper from Kenwood directly? The component I need is:

VHF 50 watt power module (144-148 MHz) Toshiba S-AV17 ($74.95 from RF Parts)

If you could suggest any replacement, or any distributor with better price, please let me know. Send me your messages by e-mail please:

ddufault@dsuper.net

thanking you in advance, 73's. Daniel VE2BAP, Montreal, Canada.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and

feature priority scan and a separate trimmer capacitor for
each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from
the crystals used in the conventional single channel
Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Greetings,

Got two questions. First, does anyone know of any suppliers of Nickel Metal Hydride (NiMH) batteries for the ICOM W32A Dual Band HT? Prefer something equivalent to the BP-173 with 9.6v but more than the NiCaDs 650 MaH. Also would like to know if these batteries are chargable with the ICOM BC-119 charger? Do the NiMHs require anything special in a charger?

Cheers,

I have had the Kenwood TS-570D since July and have enjoyed it. I've had to change the battery (a process noted elsewhere in this newsgroup.) Ignore the manual and turn the radio off before you turn off the power supply and you won't have a problem. I've gotten great reports with a modest system (Gap Titan DX Vertical @ 100 watts) from New Zeeland, Europe, etc. I do think I'll regret not buying the 570S when 6 meters opens up a bit but a budget is a budget.

Hi Guys;
I have three 2 mtr. Kenwood radios that need some work. All are virgins, in other words, they have'nt been "fiddled" with!
two(2) Kenwood TM-7850's both in boxes w/manuals and mikes, no power cables. One radio works fine but loses squelch in hot ambient temps. power out is fine and freq is within 1 khz.
The other recves fine but no output on a meter/load but audio is present on a scanner.
Both are in real nice condx otherwise!
The Third is a Kenwood TM-7950, almost mint, in box w/manual, dc cord, mike. This unit works fine other than the rcve frequency is off by 150 MHZ, tx freq is correct.
None of the units have tone encode!
All units are from the original owners estate sale and are really clean but I do not have the skill to repair. I bought them for BARTER many years ago but its now time to move them out!
Any Takers out there? For All three though! I have a tech manual for the 7850's
Please make a fair offer!

Thanks es 73.....RICH RLUCCH2098@aol.com

Hello all.

I am looking for the following T-368 parts for a "F" model that I am restoring. If you have these or any other 368 stuff I would be interested. Hopefully someone has some of these goodies laying around.

-Exciter, complete or parts unit.
-Meters, esp. the Excitation and Fil Voltage units
-Pilot Lights, and or lens
-Circut Breakers frm Front Panel
-2 Deck Handles
-Mic Plug and Socket
-Connector for rear Panel control jack

If you have any, all or other T-368 stuff I would be very interested in hearing from you, will even pick-up complete unit within 400 miles of Buffalo, NY. Small stuff I will pay shipping on.

Please contact me via telephone at 716/625-800 days, 716/689-6727 evenings, or email to kg2ic@amsat.org.

Thank you!

If you want a dual IF radio the TH-79AD is for you. The TH-G71A has 200 memory channels, PC programmable, Large backlighted keypad, alpha-numeric and sensitivity is excellent. In comparison it outperforms other manufacturer radios for intermod rejection. The stock antenna is a good performer and partially the reason it will do 6 watts output with a 13.8 dc input. If you don't need to listen to two bands at a time get the TH-G71A.

I love the built in DSP on my TS570D. Nicer if it were in the IF, but still very good. The noise reduction features work good once you get used to the funny sound. The beat cancel works well for AM heterodyne interference, too. Don't know about the Timewave, but I would be really sorry to go back to a rig that doesn't have DSP.

Another nice feature on the 570 is the DSP works on your transmit audio, too. I get so many people tell me what good audio I have on the air (when I'm not working RTTY). Never used to happen.

I confirmed Gary Fiber's statement at two Ham stores who I trust. They got
a fax a couple of weeks ago saing they are raising the price of the IC-756
to where it uses to be
in order to make room for the IC-746. So if you want the IC-756 ,I
STRONGLY suggest you buy it before the end of the year. The price will go
from $1900 (best price) I
saw to $2400 (approx). For once I agree with Gary Fiber!
Cheers, Austin Powers

Bob Snyder wrote in message ...

>I am looking at the Timewave DSP599zx and am wondering if a DSP really
makes

I have a DSP599zx and it works well.
Advantages:
1. Continuously adjustable upper and lower band frequency cut off (full
time)
2. Excellent view of what's happening (you get to see your settings)
3. Dual channel operation (but only one at a time)
4. Save settings and can be used as test equipment etc. (signal generation)
5. Small delay from input to output of audio signal (NIR-12 has long delay)
Many more including being able to power speakers directly (most do) etc..

Disadvantages:
1. In a head to head comparison with NIR-12 the ZX did not reduce noise as
much.
2. RS-232 cannot be used as a programming input to the DSP (NIR-12 does).

Depending on what you are doing, DSP works very well especially for noisy
environments. When you get a SSB signal a few KHz from the signal you want
to listen to you can easily cut him off with the upper frequency cut off ant
the same time you are reducing the general noise around the signal you want
to hear. This does not increase your signal level but does attenuate the
noise around the signal. The result is easier copy and lower ear fatigue.
Email me if you want more conversation on this..

Thanks

>
> Thanks, Don

Depending on the age of the radio, it may not be possible to open the
800mhz receive on the radio. The simplest "no solder" mod is to turn
the radio on while holding down the up/down arrow keys simultaneously.
This will clear the radio memories but will also open up the receive as
well. Doing it a second time restores the radio to normal
out-of-the-box mode.

According to the information in the data catalog that came along with one of the decoder chips, the data is sent using 1200 baud tones (old standard like we use for 1200 packet) between the phone rings. I believe that it was sent ascii, but not certain on that point.

1554. Extended Receive Standard?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-17 00:00:00 UTC
From: cdurand@tri.com
Message-ID: <882373735.65339397@dejanews.com>
Source record: 158914

Here is a question? Why don't amateur radio equipment manufacturers build all their units with extended receive standard? I know some companies do already, but not all. I know I would like to have extended receive on a few of my radios and could care less about extended transmit. I myself see no reason why someone should be able to transmit on the local cops repeater for any reason. If you have a reason the cops will give you a radio.

Just a thought, I just finished reading a story about a kid you was jamming the local police with his handheld and thought he might not have done it if the option hadn't been so easily obtained.

Item #1
Hello All;
I am selling 5ft Glen Martin Roof Tower w/ matching thrust bearing
and 9ft heavy duty aircraft aluminum 2" diameter mast. All in great
shape almost like new. Email: n2rif@amsat.org You can try calling
but my phone is usually busy cause Im on the net most of the time.
My ph# is 609-386-9382..
New it cost over $400 for everything. I am asking $290 OBO. It is
assembled. Shipping will probably be a bit hard to re-package. So
anyone who is within driving distance should probably re: My qth
is Burlington, NJ about 5 miles NorthEast of Phila,Pa and 12 miles
South of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Item #2
Hello All;
I'm selling used 2mtr 2x11 Element Crossed satellite X-yagi and
70cm 2x19 Element Crossed satellite X-Yagi.
Both are in good cosmetic & working shape. For details Please re:
email: n2rif@amsat.org You can also try calling but my phone is
usually busy... My ph# is 609-386-9382.. I am Asking $155.00 OBO
for both. No CODs All cash offers will be considered
Also since both of these antennas are too large to probably ship.
It is better for anyone within driving distance of my qth to come,
look and consider buying these beams. My qth is Burlington, NJ
about 8 miles N-E of Phila, Pa and 12 miles S-E of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Item #3
Hello All;
I'm selling a "like new - used 9 times" Mirage B 1016G [made
by KLM not by MFJ] Pre-amplified 10w-in 160-170w-out 2mtr
amplifier with all orignal boxes & docs.
Worked the "Sats" with this amp & has super preamp. Reason
for sale is strictly financial. I am asking $270 + shipping OBO.
Sorry No CODs...
Please re: me via email: n2rif@amsat.org Or Packet
N2RIF@K2UL.NJ.USA.NOAM. You can also try
calling but my phone is usally busy. My ph# is 609-386-9382..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Masa,

Excuse me but the "spam" that you allegedly received from us was not spam at all. That e-mail was sent to a database of address that we have complied VOLUNTARILY on our webpage. You added your address to this list youself, and if you'd like I can forward you a copy of the e-mail in which you did so.

I concede that I made a mistake by pasting the addresses into the "TO" field of the e-mail instead of the "Bcc:" field. However, that does not make my e-mail "spam."

I suggest you cancel this usenet post immediately, as it amounts to defamation of this company. Further, I note that you yourself have been accused of spamming the usenet, and that you have copyrighted pictures (stolen from our www.adi-radio.com webpage) posted on your radiotelephone.net page. While I haven't taken any action against you for this yet, I certainly could.

Your post on this matter is incorrect, defamatory, and, frankly, illegal. Please cancel it at once.

The Garmin 12XL is an excellent 12-channel unit, and yes, it has a great
ability to acquire sattelites rapidly in adverse conditions.

For a comparative study of various GPS units, you might like to check out the
study by some members of Cibola Search and Rescue which compares a number of
different units with respect to acquisition time, positional accuracy, price
and user-friendliness. The study can be found at http://www.swcp.com/csar.

>Rick K1BQT

I agree with Rick for the most part. I have been a licensed ham since about 1980 or 81 and have seen many changes. One thing that especially irks me is last year, a blind ham friend of mine was cited and fined by the Federales for accidentally transmitting out of band while having a CW QSO at which time his cat bumped the VFO causing the out-of-band violation. The FCC still does the menial stuff as they did to my friend but they are too lazy to enforce anything else. At the same time they will attempt to take away portions of our frequency spectrum and sell it to the highest Commercial bidder. There are some Fellow hams who do SWAT training out of Quantico Virgina who have talked about finding these fine pillars of the airwaves and doing a few practice runs on them. I think they are just kidding but God help the poor assholes who fall prey to these Whacko's. I hear that some of those who have been raising havok aren't licensed at all but just bought HF gear and moved down from the C.B. band which is less crowded so there was nobody left to listen to them. Then there are those who just plain need Psychiatric evaluation!

I have for sale a Kenwood TS-700S 2m all-mode in beautiful cosmetic condition- but the pre-amp doesn't work, and one bulb is burned out behind the "BAND" switch. Will take $275 and you pack/ship. I have the original box, mike, and manual. It has the mod to allow you to work repeaters on 145.XXX. This is a 10 watts out radio. No deals, price is firm. Will consider an even trade of a similar _working_ 440 all-mode radio. For $25 more I will sell an ARR pre-amp with a bad "SSB-HOLD" capacitor to the purchaser of the radio.

Have you tried the various processor resets?

Partial reset: while pushing (vfo)CLR turn power on.
This does not clear memories.

Full reset: while pushing SQL, VFO, and MR turn power on.
This returns all programmed contents to their
default settings.

Bob,

First of all congratulations on being a good boy. I am sure Santa will reward you appropriately.

A DSP is great, but it does not perform miracles. I find that it is very good at removing white noise and it can dig some SSB stations out of the background noise quite well. However, as someone else pointed out, it is *not* a replacement for a good IF filter, but it *does* augment the IF filter.

The noise reduction is somewhat related to the level of filtering (some of the DSPs allow you to set the level), but at a high level of filtering the DSP will also distort the voice signals. That may be acceptable for working the odd DX station, but is not much fun for ragchewing. I would recommend a DSP with variable filter level for that reason.

Being able to tune the bandpass is also nice. This capability can be used to optimize the filtering for a particular voice and can improve readability under adverse conditions. I would recommend a DSP with continously variable bandpass filtering - if high and low bandpass can be set seperately, it is even better.

I have tried quite a few different DSPs, e.g. Radio Shack 40, Timewave 9, Timewave 9+, Timewave 59, W9GR DSP-3, JPS NIR-12 and The DanMike DSP-NIR. Of those, I like the NIR-12 and the Danmike DSP-NIR best.

The NIR-12 uses two DSPs. It is also the most powerful of the DSPs, I have tried. The negative points: the headphone socket is on the rear panel and the filter level switch is also there. I like to change the level depending on the type of QSO and my unit is mounted in a rack, so the level switch and the headphone are both unuseable.

The Danmike DSP-NIR is sold by Down East Microwave and is the most expensive of the DSPs. However, it also has a continuously variable filter setting and it also gives the best voice quality. It has an AGC which is particularly nice on FM signals and it has several fixed filters: HF packet, SSTV and RTTY.

If you only use the DSP for CW, you can probably get away with cheaper models - even the RS DSP works well here. However, for any wide bandwith operation (even scanning the band for CW stations), I would recommend either the NIR-12 or the Danmike DSP-NIR.

I hope my long-winded discourse helps. If you have specific questions, please send me an email to: erik_skovgaard@bc.sympatico.ca.

73 & Season's Greetings de VE7MDL ....Erik.

> Tinkerman

Your reciever's channel bandwidth may not be wide enough for a high speed data channel. Try installing a wider IF filter. This is easier at the 455 KHz IF rather than the 10.7 MHz IF. The NFM mode on a scanner usually uses a filter about 5 KHz wide. Try one about 15-20 KHz wide. Murata and Kyocera mahe them. Some types come in a variety of widths. Find out what filter is used in your scanner, look it up in a catalog or on the manufacturer's WEB site, order a similar, but wider unit and install it. Note: now your radio's NFM mode will cover 3 or 4 5KHz wide voice channels, so you might notice adjacent-channel interference on crowded bands. for more theory on digital radio, read the publications of the Amateur Radio Relay League. Hams do a lot of digital stuff these days.

Good Signals!

I have had a GAP Titan for a year and a half and love it.
Works great, with 1:1 to 1:5 SWR on all bands. I use it on 6M with no
problems.
Best thing I can say about it is - I'd buy another one.

> > Dennis

Hi Dennis,

I have a 706 and find it to be a good radio. I have it up for sale but my big gripe is the fan noise if you're using it fixed. I bought it for the mobile, but never put it in. I spoke to an ICOM manager after noting the fan noise and he offered me my money back if I wasn't happy. I didn't take him up on it, because I liked the radio otherwise.. Everyone has a different story... try the radio yourself before you decide.

Best of luck,

Barry K6ZA

Hi there
I bought a DSP-59+ thinking it would make the noise vanish on
SSB, worst mistake I ever made. It removes some noise but the audio gets
chopped a lot. In my opinion, a DSP is very good to remove heterodynes but
that's all it does. I got rid of my DSP, sold it to a ham who needed it for
cw, he loves it. Hope that helps.

Hi there
In my opinion, you should look at rigs that are a little older but better equipped. For example, you could get an Icom IC-735 for less and have a radio with a lot more bells and whistles. This is the way I went and I don't regret it. An FT-840 is a good rig but it is very lacking. It doesn't even have an RF gain control and this is something you need in my opinion. You also need to buy an AM filter because shortwave reception is very bad without it. An IC-735 has AM, FM and SSB already built in, just add a cw filter if you want one. The passband tuning control can replace the cw filter in most situations. At least 3 models of antenna tuners are available so that's not a problem.The automatic antenna tuners offered by Icom, Kenwood and Yaesu have problems with some antennas like the G5RV, If you plan on using one, get an automatic tuner like the LDG AT-11 or get a good manual tuner like the MFJ-949E. I hope this helps a little, if you want more info, just email me.

Hi there
You have to snip D33 and D34 which are standing on end near the microprocessor. I bought mine modified like that and it transmits everywhere it receives. Power output is not the same everywhere, you have to check it out with a wattmeter. I hope you have a good tuner because transmitting on the AM broadcast band is not easy unless you have a very long antenna. Good luck.

Hello Dudes,

The heading says it all: after tapping my scanner's discriminator output and still not acheiving a sufficiently fast data receiver (above 8K baud, not just pocasg...), I'm looking for a reasonably priced receiver with a built in data port (i.e. data slicer, outputting the high speed bits modulated on the signal such as MDT, POCSAG, EDACS, etc. for external decoding). Ideas, anyone?
Just in case, if someone HAS managed to acheive high speed data reception with a standard scanner plus discriminator tap and possibly improved (compared to mine) data slicer, I would sure like to hear about it...;-)

cheers,
Tinkerman

Note: when Replying, please email me directly in addition to posting here, so no responses are missed. Don't forget to remove the "97" from my email address inserted as an anti-spam counter measure...:-)

>
>What is the populatity of digital coded squelch and what are predictions for
>future popularity in both amature and commercial markets.
>
>I'm just curious about this topic.
>
>Tracker
>
>

The reason for digital was that the commercial radio users in large cities ran out of analog tone squelch combinations. In those days there was no 800 MHz band. Everyone was crowded onto ~35 MHz, 150 MHz and 450 MHz. Frequency sharing among dozens of companies was common. On the lower frequencies (35 MHz) there was interference from distant stations during "skip" conditions of high sunspots.

By sending a repeating bit pattern along with the voice, it was possible to increase the number of squelch combinations and reduce likelyhood of cross country dispatching of police cars and such.

Digitally coded squelch was superimposed on the FM carrier exactly the same was as analog tone squelch; about +/- 700Hz of deviation. As I recall, it ran about 100 bits per second.

Hope that helps.

This is a real decent looking amp,(could paint it and it would be new looking.) Has 4 Brand New 24LQ6's in it. Was converted from 6LQ6 because of easy and cheap availability of the 24 volt tubes. Also has new relay in it and in now functioning perfectly. For $300 shipped it would be hard to beat! I had 7 other tubes with it but all were soft!....New ones from Antique Radio for $12.50 each and plenty avialable from several sources. 73 and where do you want it shipped. If you arent satisfied with it, I will take it back or trade you UP!! Murray

>antennas but would like to run just one.
>
>I'm WAY OPEN for suggestions!

Two cans won't do it, Dino. Most repeater duplexers will be 4 or 6
can units. There are two different kinds. The most common, and
cheaper, duplexer will be all notch. For best performance, this needs
to be a 6 can unit. Three cans will be in the transmit side and three
in the receive side, tuned so that they notch the opposite frequency.
A good price for a used notch duplexer is $200.

The better, and more expensive, duplexer will be bandpass/band reject.
These are typically 4 can (but more complex cans), though the very best
units are 6 can. Each can combines a bandpass and a notch which are
separately tuned. The normal setup is again for an equal number of
cans on the transmit and receive sides. The pass is tuned to the frequency
of the side on which it is installed, and the notch is tuned to the opposite
side's frequency. A good price for a used duplexer of this type is $350.

The bandpass/reject duplexers are usually worth the extra cost
because they deal better with broadband transmitter noise, and with
strong off channel signals at the site. The notch only duplexer doesn't
do a thing for you with regard to those problems. For portable use at
a relatively low RF site, the all notch design will suffice, and save you
some money.

Note that the cable harness which connects the cans is part of the
duplexer. You can't just use random interconnect cabling. The harness
is cut to phased lengths in order to make the combining work properly.
If you scrounge some bare cans, it'll be up to you to correctly build
the harness. Use very high quality double shielded cable (or Superflex).
Also use high quality cable to connect the transmitter and receiver to
the duplexer. Any leakage here will reduce the effectiveness of your
expensive cans.

Note that if your repeater can get away with running low power (5 to 10 watts),
you can use the much smaller mobile duplexers originally intended for IMTS
(the old radio telephone system before cellular). These can often be found
cheap, and they're small. (the UHF IMTS cans are much more common than
the VHF IMTS cans, however, so you may have to do a good bit of searching
to turn up a set of these.) A good price for one of these duplexers is $60.

I use a set of UHF IMTS cans for my briefcase repeater. Works fine.

>
> 1. He didn't need any kind of license. Did Motorola buy these bands?

Nobody owns a frequency band. Although, recently the FCC has been auctioning off the right to use various pieces of the spectrum. Most of the auctioning I think has been connected with cellular services.

Also, if he is operating on the commercial frequencies he has to be licensed. Or, he could be using the NEW Family Radio Service (FRS) channels of which there are 14 freqs, 7 at 462.5~ and 7 at 476.5~. These are regulated to be 1/2 watt radios with non-removable antennas. You can buy FRS radios at Radio Shack and probably WalMart these days.

> 2. This is outside ham space, so is it considered an out-of-band
> transmission to communicate with my friend using my own (opened-up)
> radio?

YES, its illegal...amateurs can only communicate with other amateurs on amateur freqs. You cannot legally set up your Handi-Talkie to receive a 460 mhz freq and transmit on say 446.x (operate an odd freq split...even though many HTs will do it). Also, you cannot transmit to him on his 460 freq because you are not licensed to xmit there, and because you radio is probably not FCC Type Accepted for commercial service.

> 3. Can he set up a repeater or the like on this frequency? Just how is
> it governed?

The FCC has regulations defining communications of all sorts, be they amateur, commercial, citizens band, FRS, etc. He can setup a repeater if he is applys to the FCC to do so and get the license for it. If he is operating on FRS channels then the answer is NO...No repeaters allowed.

1615. SWAP pentium desktop PC for UHF repeater & Duplexer

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-18 00:00:00 UTC
From: Jason Goldring <jasong@cgocable.net>
Message-ID: <67bpc0$58q$1@tor-nn1.netcom.ca>
Source record: 158807
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Pentium 120 with 16 mb ram, 1 GB maxtor SCSI disk drive and Adaptec 1540 controller, 1 mb pci video card, your choice of desktop case or tower case. 14" NEC multisync II monitor, 16 bit wavetable sound card, 28.8 internal fax/modem.

Will swap for a UHF repeater with controller & duplexer. Prefer synthesized repeater, but crystal is acceptable. I also prefer to deal in Canada but I may consider US trades depending on the equipment.

Computer comes pre-loaded with Win'95 and Ofice 97 professional, as well as a few other programs. System works fine.

Please respond to jasong@cgocable.net

1620. ic706 - ALC input to control power to transverters ?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-18 00:00:00 UTC
From: ed finn <ed.finn@ustc.vlsi.com>
Message-ID: <34996EFA.7E4A@ustc.vlsi.com>
Source record: 158812

Hello,

I am generating a negative voltage to the ic706 alc input to knock back the 28 mHz power to a level suitable for a dem 432 transverter (~ 0dBm). I am noticing some warmup related power drift on the transverter output. I am not sure how repeatable the ALC input circuit in the ic706 w/ a stable minus input.

Anyone playing w/ this successfully?

The spec, as I understand it:

alc input impedance : > 10k ohm
alc voltage range: 0 to -4vdc

I have seen this fault described in a packet bulletin some time ago and
I clipped it into the back of my manual in case it happened to my 232.
Try checking diode D13 on the main board, the diode is a 1N4448
according to the message.

For Sale:

Like new Cushcraft R-7000 vertical antenna. Used 9 months and then taken down, when I moved. No place to put up at the new QTH, so need to liquidate. I have done all of the hard work by tuning and marking the antenna so that all you need to do is put it on a pole and you're ready! It's in 3 sections now. Would prefer a local (Dallas, TX) sale, but will consider shipping.

Worked great on all HF bands 10-40. I have the manuals. Asking $300 plus shipping.

73,
Glen Kitto

REPLY...

I suppose it was only a matter of time before someone, while talking about amateur radio, would bring the Soviet Union, and North Korea, into the discussion (they seem to creep into every other discussion).

What any of this has to do with radio is beyond me. Perhaps Jonesy imagines that holdovers from the old Soviet empire are using amateur radio to subvert the free world. And giving Technicians access to the HF bands would further the goals of that evil empire.

1637. Yaesu - Problems w/ FNB-41 Batteries

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-18 00:00:00 UTC
From: Ed Walsh <emw-1@SPAMNOTworldnet.att.net>
Message-ID: <67ck2i$79n@bgtnsc02.worldnet.att.net>
Source record: 158829

Hello.

I am currently using two FNB-41 batteries on my FT-50R. I have recently found that when dropping either one or both of the batteries into the rapid charger, there is no response at all from the charger. I am able to completely charge the batteries successfully using the wall charger, but needless to say that ties up the radio and takes many hours. I tried a friends battery in the charger and it worked fine. It appears to be something with the batteries.

Does anyone have any thoughts as to why the batteries would not be recognized by the drop-in rapid charger?

Thanks very much!

I just got my free programming software for the IC-W32A. I notice that extended recieve can be turned on and off with a check-box. Although, I don't yet know any key strokes to cancel extended recieve.

BTW: The software is quite nice and is a time saver. It is a little clunky though (i.e. works like an early Windows 3.1 shareware program).

1641. Re: IC-W32A Power Conservation????

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-18 00:00:00 UTC
From: dnult <dnult@concentric.net>
Message-ID: <3499F0B4.5AA1@concentric.net>
Source record: 158833

I've noticed the same thing on my W32. I measured the current drain
just for kicks and here is what I found:

(with power saver off)
440 recieve 82mA
140 recieve 69mA
Both recieve 130mA
Both U/V recieve and backlight 205mA
140 xmit low 400mA
140 xmit hi 1.6A
440 xmit low 500mA
440 xmit hi 1.5A
Audio on either band adds 18-60mA depending on the volume per channel.

In summary, Yes, turning off one band will reduce the current drain.
You might also turn off the beep function. I'd also recommend the Power
Saver function. (I use Auto to prevent chopping up the audio).

I figure that eventually some manf. of batteries will start carrying
replacement packs for these radios. I'm particularly interested in a
lower voltage (i.e. 7.2V) high capacity (i.e 1100mAh) packs in NiMH.

From: Steve Ellington <n4lq@iglou.com>
Message-ID: <01bd0a57$0fa8dfc0$37efffcc@n4lq.iglou.com>
Source record: 158860

Most computer noise comes from it's power supply. I tried using the Radio Shack ferrite chokes on the ac line to no avail. Finally, I dissambled the power supply and soldered some .01mfd, 1kv disc capacitors across the line cord and from each leg of the cord to ground (green wire). This reduced it to acceptable levels.

Using open wire feeders increases your chances of noise pickup. Use coax and a matched antenna. Open wire feed will work if the antenna is balanced. Otherwise, the feeder acts as an antenna in the shack thus more computer noise.

A couple of questions:
What are the best filter sets/kits for this rig? Aftermarket or otherwise, that is!
Has anyone used this rig for AMBCB DXing as well as the obvious ham bands, and how does it stack up?
How well does the notch/peak etc. filtering compare to, say, a decent gen.cov. receiver in a similar price range?
I know, a lot of questions but that's the only way I'm going to learn anything!
Thanks for putting up with me!
Mike in MO.

I fail to see why the non-code license holders should be blamed. I think the code should always be used if that's what folks want to use; let the FCC and the ITU/WRC folks worry about its status as manditory/not manditory.
But why blame Tech's /Tech+'s? If the use of the HF bands was any cleaner or nicer than the bands allotted to Tech's, I'd agree with the original post, but we all know this is just not so.
It's the General, Advanced and Extra ticket-holders who must accept responsibility and act accordingly; the airwaves mat be our right, but you'll hold on to that right a lot stronger if you treat it as a priveledge!
It's just like the kids of the '60's parents hating the Beatles. Sure, the kids WERE buying the records, but who was SELLING them to 'em? Grown-ups the same age as those kids parents? Don't yell at the "kids/Techs" for bad usage of bands if your own room is a mess. Grow up and take some responsibility.
Mike in MO.

>makes that much difference. So what I "think" I really want is
>something that will help with SSB adjacent signals, static (man made
>and lighting crashes)and those pesky AM stations on 40m.

Hi Bob,
DSP units are great. The NIR10 is absolutely superior for SSB if you
can find one out there with the ver. 4 upgrade. I own three of them and
after side-by-side comparisons with the rest of the stuff out there,
wouldn't sell them at any price. I like them much better than the
NIR12s, but the newer unit is also quite good.
Best accessory you can own.
73 es happy holidays de Rick, N6CR

Don, use your web browser to search for radio mods or go to the
Shortwave Radio Web page "http://itre.ncsu.edu/radio/" On the second
or third page you should find a reference to radio modification. I
have modified my FT530 for out of band recieve. Mine required
removing a solder bridge between two pads. My friend's already had a
green wire connecting the two pads. We just had to clip the wire.
You do have to reset the cpu to get it to acknowledge the additional
frequencies. Let me know if you cn't find it and I will forward.

Webcor Regent Coronet Stereo Tube Model #2380-1 reel to reel. Made in Chicago. Excellent running top-end three speed tube unit from late 1950's or early 60's with extra features. Has separate optional Webcor compact mini-suitcase speakers that fold into little suitcase. Handles 7 inch reels. Has top-end options for its time. Weighs about 38 lbs by itself. No mikes, missing small piece of cover plate on bottom about 2"x 3" for access (Just screw in any plate to cover if you wish), have SAMS photofacts manual for unit. $100 plus UPS Shipping. Will pack it free.

Have photos if you wish me to email them to you. Must see.

Will consider trades all or in part for Civilian or Military tube tester as well -- or guitar or bass amp.

1678. IC-W32A Power Conservation????

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-18 00:00:00 UTC
From: Cal Kutemeier <ckuter@ix.netcom.com>
Message-ID: <67b5t1$ac4@sjx-ixn8.ix.netcom.com>
Source record: 158882

I am surprised how quickly the BP-173 battery is used up with my new W32A. It seems that I get about 2 hours or less usage before the radio starts beeping and the display starts flashing (5.0 V). I have two questions:

1) I am using both the 2 meter and 70 centimeter bands at the same time. If I turn one of the bands off, will I use less power, ie. get more time on each battery charge?

2) Is there a way that I can use the W32A with power coming from an AC source? Is the OPC-254 cable the one to use to do this? If not, what is it for?

Are there any other suggestions for extending the life of a BP-173 charge?

Thanks for your help.

>1) I am using both the 2 meter and 70 centimeter bands at the same time. If I turn one of the bands off, will I use less power, ie. get more time on each battery charge?

Yes using 1 band at a time conserves battery life

>2) Is there a way that I can use the W32A with power coming from an AC source? Is the OPC-254 cable the one to use to do this? If not, what is it for?

The OPC-254 is made to connect up to a 13.8 volt power supply. What
you need is a 13.8 volt power supply capable of at least 3 amps. The
radio does not draw that much current, but having a larger supply de
rates the supply and allows it to operate with in middle range of its
current capability.

Once the radio is connected to the power supply the battery is
continuously charged so it is best to exercise the battery often.

>Are there any other suggestions for extending the life of a BP-173 charge?

The life of the battery depends upon the user. The more you talk the
less battery life you have. Use lower power, shut one band down if
not required, do less scanning etc. All will help extending battery
life. The W32A draws over 1 amp of current when transmitting on high
power.

Automatic antenna tuner built from a kit (not by me).
Got it from a ham in Ontario who bought it at Denton
from a U.S. ham who had built it himself.

In perfect working order. Sells for $230. assembled.
I will ship it insured to your door for $150. U.S.
Comes with manual.
If interested, contact me by email.

1685. Re: Yaesu FT-1000D circuit improvement?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-18 00:00:00 UTC
From: Howard Gould <w4nvf@avana.net>
Message-ID: <01bd0bc9$017f64a0$f83d2acf@w4nvf.avana.net>
Source record: 158889

The trouble with your FT1000D is an ongoing thing Serge. I have one that is about 5 years old and there were 35 modifications made to mine before I bought it by Yaesu.
I also bought the service manual which is not cheap. The problem is they don't keep you abreast of their mods by mail so as years go by they add more mods to keep fine tuning it. The service manual will list all the mods made up to a certain serial number but after that, you have to keep in touch with them. I would say if yours is only a year or so old, don't worry about the mods. You probably would not know the difference when you got it back and it surely won't change the rigs operation so you would see a difference. mine is a little slow on tuning up on the AT and they probably changed a timing thing or two to make it tune quicker but for me to send it back just for that and a couple of other things that are minor would be a waste of good dollars.

Run it and enjoy.

For filters I use both of the 500 Hz filters, and the 1.8 Khz for SSB.
These are stock from Kenwood and work great.

I find the notch filter to be almost useless. One of the few poor features
of this otherwise excelent radio.

The receiver overall is still superb, even though it lacks DSP.

It seems I made a booboo, the ham got it at Dayton, not Denton. I received a few questions. No, it cannot tune a hubcap on 10 meters, that is the specialty of MFJ tuners. With a standard antenna like a dipole, it does tune on every ham band with no problem. Yes it does make funny noises because of the relays inside, you get used to it after some time. It operates on 12 volts and doesn't consume much power. The tuner always aims for a SWR below 1.5 to 1 and tells you what it got with 4 leds on the front panel. It can work in full auto mode or manual, take your choice. I am selling it because only my MFJ-949E can tune my G5RV everywhere. The G5RV is a very funky antenna when it comes to SWR. All the auto tuners I tried have a nervous breakdown with a G5RV, even the best ones. Maybe I should get another antenna!

Works reasonably well. Real fun to use. Of course you need a real antenna,
the one that comes with it is very marginal. If you can get the
configuration files that come with the Japanese version it will receive
dc-daylight unblocked.

1702. FT101 AUDIO PROBLEMS

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-19 00:00:00 UTC
From: Itis Fermi <itis.fermi@lunet.it>
Message-ID: <01bd0c4c$6b701fc0$4e05fac3@internet>
Source record: 158708

I am Andrea IK5QLO, and I have a question about
an Old HF RADIO.
A friend of mine bought some days ago a SOMMERKAMP FT277 wich is
identical to the FT101 but I think It was sold with this name by
this swiss inporter. Its serial n. 22048E applied in LUGANO Switzerland.
Its almost perfect ,it gives abt 120W out on 20Mts so I think the final
tubes are OK. But It has a defect. After you have trasmitted for more
than 2 minutes when it goes back to RX it has no audio output.
After it cools for another couple of minutes the audio returns.
can you suggest me something ?

best 73 ! Andrea IK5QLO

I have a Kenwood TS830S that receives but has very low power on the output. Only about 5 to 10 watts. It has new tubes and the antenna is fine. Any ideas where I should start looking for the problem. It's been sitting for the last year just waiting for me to finish my Ironman triathlon stuff. Now ready to get back on the air.

I just purchased an IC-756 last month and have been quite pleased with it.
I find it extremely difficult to believe that Icom will raise its MSRP by
$400 or so dollars at the end of the year to "make room" for the Icom IC-746.
Pricing on Japanese rigs still seems to reflect the 80 yen to the dollar
exchange rate that occurred a few years ago when manufacturers last raised
prices. I've seen no corresponding across the board price reductions to
reflect that the dollar has appreciated something like 50% on the yen
since then.
Despite the assertions that the price is going up, I'll believe it when
I see it. We probably shouldn't be trashing Icom just yet for something
that may not happen. I've seen nothing (yet) on the AES, HRO, or Texas
Towers WWW pages warning of an impending price increase.

Source record: 158752

I disagree. First, I commend Gary Fiber (ICOM) for being the only guy to represent a Manufacturer on a regular basis on the Newsgroup. For all the flaming rom people like
me (hee hee) he does a good job. Second, Icom comes out with new ideas such as
the ICOM 706 and doesn't wait for the competition to top it. They just updated the IC-706 calling it the MK II. The IC-756 is revolutionary because of the built in SCOPE
for a reasonable price (very unique). The IC-746 will be nice too. If it wasn't for Icom
I bet Yaesu wouldn't have come out with the new HF-6 meter radios. Yes, they change models often (like Alinco) but I like the new stuff. I'm sick of seeing old models like
the Yaesu FT-736 still be offered as "HIGH TECH" etc.
Cheers, Austin Powers

Hello,

I received yesterday my new Kachina radio and promptly went to work setting
it up
on my machine which runs NT server. The software installs ok but could not
talk
with the radio no matter which (of my 8 com ports).

I tried a laptop running NT Workstation. Same result.

Finally I tried a Win95 clunker I have for software testing. It worked!
Whew... At least
it was not the radio.

So I called Kachina. Like a few other posts here. I got GREAT support.
Within ten minutes I was talking with one of the software guys. There
currently is a problem under Windows NT but they have a fix that will be
released just after the 1st.

Nice radio... Nice company. Keep up the good work Kachina!

Source record: 158762

Hi, Gary. I do not own an IC-756. It was chosen as a topic because it has not been superceded yet, that is all.

I'm not bashing Icom. If I did not like their radios, I would not care what they did, one way or the other. It is apparent that I am not communicating my thoughts to others as they are to me. My apology. Certainly, I am not bashing you. You are an asset to rec.radio.amateur.equipment.

With that said, and with the understanding that I am speaking in a broad sense, Icom (and all of the other amateur radio equipment manufacturers) would be far better off (i.e., sell more equipment) if they would look at their actions from the consumer's point of view.

For instance, take the IC-706, please (pah-rump-pump!). The design should never have gone into production. The Mk II should have been the original IC-706. There are no quantum leap, hi-tech improvements incorporated in the Mk. II. Just plain old common sense changes that should have been incorporated from the very beginning. Inadvertantly (I hope), Icom has disenfranchised many owners of the original 706 by seriously eroding the resale value of the unit with the introduction of the Mk. II. Most hams that I know are not rich, and many depend on a good resale value of an existing rig to help finance the purchase of the latest and greatest equipment. That is how I operate.

I do not expect you to comment on Icom policy. After all, you are an employee. On the up side, your contributions to the group are invaluable. Keep up the good work.

Yeah, i looked at this radio, but for the cost as compared to other
radios, and given how much i use my computers (which is a lot), If I had a
stand-alone radio as opposed to the kachina, I could still use my
radio even if i lose my hard drive or the computer wont boot...

Plus i don't have to wait to boot the darn thing...
Which isn't too much of a problem to me, since my computer hasn't been
turned off in over 8 months... ;) but to others... maybe?

Plus i doubt that kachina has versions for linux/xwindows... :-)

Given, though, it is a VERY interesting idea! :) For novelty sake, i
wouldn't mind having one if i had another radio to use otherwise.

I do think it's cool that they have such great support for it though. that
is hard to find nowadays.

I suggest that you purchase a book titled 'Weather Satellite Handbook'
published by the ARRL. I have this book, and it has all the information
you need to build a weatherfax converter.

You can find the book at the ARRL web site:

http://www.arrl.org/catalog/index.html

The book is located under the 'space and satellites' section.

assembled. Shipping will probably be a bit hard to re-package. So
anyone who is within driving distance should probably re: My qth
is Burlington, NJ about 5 miles NorthEast of Phila,Pa and 12 miles
South of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Item #2
Hello All;
I'm selling used 2mtr 2x11 Element Crossed satellite X-yagi and
70cm 2x19 Element Crossed satellite X-Yagi.
Both are in good cosmetic & working shape. For details Please re:
email: n2rif@amsat.org You can also try calling but my phone is
usually busy... My ph# is 609-386-9382.. I am Asking $155.00 OBO
for both. No CODs All cash offers will be considered
Also since both of these antennas are too large to probably ship.
It is better for anyone within driving distance of my qth to come,
look and consider buying these beams. My qth is Burlington, NJ
about 8 miles N-E of Phila, Pa and 12 miles S-E of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Item #3
Hello All;
I'm selling a "like new - used 9 times" Mirage B 1016G [made
by KLM not by MFJ] Pre-amplified 10w-in 160-170w-out 2mtr
amplifier with all orignal boxes & docs.
Worked the "Sats" with this amp & has super preamp. Reason
for sale is strictly financial. I am asking $270 + shipping OBO.
Sorry No CODs...
Please re: me via email: n2rif@amsat.org Or Packet
N2RIF@K2UL.NJ.USA.NOAM. You can also try
calling but my phone is usally busy. My ph# is 609-386-9382..
Thank you for reading my bulletin. Thomas J or just T.j. -73

hi all,
I have a Kenwood TS-430S that has started to draw 33 amps while transmitting on 40 and 80m. It used to draw about 23. When i key down i turn the carrier gain down until i get about 50w out and the meter on my power supply says it is drawing 33 amps. slowly the reading will start to fall and i can turn the gain up little by little and finally make it up to 100w. too fast and the power supply quits. if i dont transmit for 30 seconds or so, i have to repeat the process. Operation on other bands is fine. any suggestions or ideas? please send replies to zootv@erols.com thanks

>amp-hours you can get out of the battery?

There are a number of tests you can perform on a lead acid
battery to determine its health. The first and simplest test is
a terminal voltage test. If after fully charging the battery, you
don't see 13.8 volts immediately after the battery is removed
from the charger, or 12.5 volts after sitting for a day, then the
battery is ill. (This assumes a nominal 12 volt battery of course,
if your battery is a different voltage, adjust accordingly.)

If the battery is a wet cell type, do a hydrometer test of the cells
if it fails the voltage test. If one cell is significantly different
from the others, put the battery on float charge for a few days
to see if the charge equalizes. If it doesn't, off to the recyclers
with this battery.

Next is a load test to determine capacity. Discharge the battery
at a 0.05C rate until the terminal voltage falls to 10.5 volts. You
should be able to draw very close to the rated amp-hour capacity
of the battery before terminal voltage falls to 10.5 volts. If you
can't, the battery is ill. (C is the battery rated amp-hour capacity
taken as a plain amperage, IE for a 65 amp-hour battery, C is
equal to 65 amps.)

If the battery fails this test, it is likely significantly sulphated.
There are some patent elixirs you can try at this point to rejuvenate
the battery, but they probably won't work, or won't work for long.
A complete change of battery acid may help. Otherwise, it is off
to the recyclers.

Finally, a dynamic load test should be performed. Draw current
from the battery at a 10C rate for 20 seconds. Terminal voltage
should not drop below 8 volts during the test, and should immediately
rebound to at least 10.5 volts at the end of the test. (If the battery
is fully charged at the start of this test, terminal voltage should
rebound immediately to 12.5 volts at the end of the test.) If the

battery fails this test, it is ill. (Note, gell cells may fail the 8 volt portion of this test. That doesn't necessarily mean that they are bad, but it is cause for concern.)

This test determines the battery surge capacity and internal resistance. A good battery won't even fall close to 8 volts during this test. Older batteries will drop closer and closer to 8 volts. When they drop below 8 volts, they should be retired.

Gell cells naturally have a higher internal resistance than wet cells, so they may look like a weak wet cell type on this test. If they rebound rapidly, they may still be Ok. Any battery which doesn't rebound immediately is fodder for the recyclers.

For the most part, if the battery fails *any* of these tests, it should be replaced. In some cases, there are things you can do to revive a battery which fails *one* of these tests. But if it fails two or more, it is ready for the recyclers.

The stock NBFM filter will *not* be 5 kHz wide. With a 5 kHz deviation,
and a peak modulating frequency of 3 kHz, the filter *must* be at least
13 kHz wide. Normally, NBFM radios are fitted with filters either 15 kHz,
or more commonly 20 kHz, wide.

For 10 kb FSK data with a modulation index of 1, you need a filter which is
at least 30 kHz wide, preferrably 35-40 kHz wide to allow for phase non-
linearity at the passband edges. Murata makes suitable filters. Digikey
sells them.

This may not actually be the problem you're having, but FWIW...

Check the solder joints on the two PA transistors. These rigs have a
history of the emitter leads coming unsoldered from the PWB. I had
this happen to my TS-430S back about 1986 or so. Yours may not have
come fully detached, but the connections may be weak. If the emitter
connections are resistive, the rig may draw excessive current. As
the connections heat up, they may conduct better, lowering current
consumption.

Universal Radio is very good.

My wife ordered me a portable SW radio last Friday (12/12). It arrived yesterday (12/18) without any problems.

I gave her a couple of choices, and had her ask them which one would best suit my specific needs. Either a Grundig YB400 or YB500. They recommended the YB400, and after doing some research, I agree with their recommendation.

Both models were discounted. The YB500's being old stock (I presume) and the YB400's being re-furbished units. Both were priced very close, so It was a toss-up for me as which one to get.

Now, if Christmas would hurry up and get here!

>recognized by the drop-in rapid charger?

Perhaps the batteries' impedance is too high? If it is, and the charger tries to push the 800 mA fast-charge current into the pack, the voltage goes up beyond some threshold and the charger decides it can't charge the pack.

Another possibility is a bad contact on the pack. The fast charger charges through the contacts on the bottom, while charging through the radio uses the contacts on the side.

You have a fast charger, several battery packs that don't fast charge, and you can borrow one that does work. Try taking a meter and looking for differences between the working and non-working packs while resting, during charge, and during discharge.

Dave

1748. Excellent Alinco DJ580-T and accessories for sale

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-19 00:00:00 UTC
From: wd4sgu@juno.com
Message-ID: <882571066.1288503304@dejanews.com>
Source record: 158791
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

For Sale:

Alinco DJ-580T dual-band handheld in excellent condition (a 9+ out of 10)
with original box, manual, antenna, NiCad battery, and wall charger.

The radio covers the following frequencies:
AM aircraft 110-143mhz
VHF ham & Public Service 130-174mhz
UHF ham & Public Service 420-480mhz
and full cellular/etc. 800/900mhz

Mars/CAP tx is also enabled.

Full accessory package includes two extra standard batteries (EBP-20N),
soft case (ESC-17), remote-control speaker/microphone (EMS-8Z), dry-cell
battery case (EDH-11), and drop-in quick charger (EDC-34). This charger
operates from a wall transformer (included) or a 12-volt car cord that
allows for charger operation from any 12-13.6v source, so you can even
charge the batteries from your car lighter socket! You can also operate
the radio while it is in the charger. LEDs on the charger indicate
battery charge status.

This radio has 40 memories plus 2 call channels, simultaneous dual-band
scan/receive, CTCSS, Digital Coded Squelch with paging and messaging,
full crossband duplex, crossband repeat, 3 DTMF autodial memories, and a
host of other features you would expect to find in a first-class radio.
It even has a stereo earphone jack that allows for separating the audio
from the two bands. It has a jack for direct connection to a car cord or
other power supply for a full 5 watts output. Output from the standard
batteries is 2.2 watts, but 12v batteries are also available, and work
with the drop-in charger.

This is a terrific package for the new or experienced amateur. The
accessories alone have a value of close to $200.

Total package price: $350.00.

Body handling: Binary attachment payload not displayed: earphone.jpg, lapelkit.jpg, palm-mic.jpg

Do you know where I can find earphones exactly like this for
radioamateur. These are Otto Eng., but they don't work on
radioamateur. So anybody know WHERE I CAN FIND EARPHONES LIKE THESE...

[One or more binary attachments are retained only in the source text.]

Date: 1997-12-19 00:00:00 UTC
From: ka0rny@midusa.net
Message-ID: <3499ca81.90015110@news.midusa.net>
Source record: 158840

Hi Everyone.

I understand there exists a modification to the Kenwood TS-850S that allows adjustment of the CW sidetone volume from the front panel using the Monitor potentiometer. The normal monitor operation is said to be unaffected by this mod. The problem is that I can't find this anywhere! All of my searches have come up empty trying to find this bit of information. If some kind soul has it in electronic form I would appreciate receiving a copy.

Yes, I know that. I'm trying to get hold of the I.F. frequency of my
modified scanner (PRO-36) to get a replacement filter. Can anyone on
this newsgroup provide this info?
There's also the issue of "non linear group delay" of the i.f. filter,
causing excessive jitter in the signal.

>for more theory on digital radio, read the publications of the
>Amateur Radio Relay League. Hams do a lot of digital stuff these days.

Have you heard about someone who has acheived around 10K baud with a
scanner?

>Good Signals!

Thank's pal.

Note: when Replying, please email me directly in addition
to posting here, so no responses are missed. Don't forget to
remove the "97" from my email address inserted as an anti-spam
counter measure...:-)

Thanks and best regards,
Tinkerman

equinox@nospam.itl.net wrote:

> And Icom have just announced a DECREASE in the UK as the
> radio is over
> priced!

This is precisely my point. Icom is playing pricing games with no regard for its customers received value.

Which brings me to another point; Is Icom, the manufacturer, or Icom America the importer, the one who is playing these games?

Yes, we live in a capitalistic society, and, yes, we have the right to charge whatever the market will bear. No argument from me. However, as a consumer, I have the right to choose another brand of rig. One whose price remains somewhat stable and one that will not be made obsolete (perceived as, that is) in just a few months after they have worked the bugs out of it.

Before the kiddy-kiddies out there begin harping about "state-of-the-art" and all of that rubbish, I defy them to point out anything new that has been introduced during the last several years that makes a damned bit of difference in operating effectiveness or ease for the average ham. Blinking lights, fancy names and tons of buttons I'll never use do not impress me. Give me something I can use. For instance, someone said that Icom Tx audio is tailored for DXing. That's nice, but how about adding a button that permits the user to select a little better EQ for ragchewing? THAT would be a feature I would find valuable in a low priced ham rig.

This is a forum that is wonderful for informing the powers-that-be of our needs and desires. I have no malice toward Icom at all, and they certainly are not the only producer of amateur radio products that can stand a little constructive criticism from time to time. However, there are no sacred cows...

Source record: 158847

In the first 2 months of new ownership of a ft-50rd, I made a post here about my battery pack.
The problem was on mine , I could have a fully charged pack on the radio, radio operated fine. I would power off and then later when powering on the radio would not come on until the battery pack was completely remove this happeded w/ the 9.6 and 6 volt packs. I tried to just slide the pack around w/ out breaking the contacts. I figured this would kinda eliminate a corrosive effect(??) on the contacts. the happed up to three times a day on 2-3 occasions but would happed only once every 4 days or so.
I know this seems a little distrcated from your post. but info is good. sometimes...

Source record: 158606

Here it is. The TS -570 is great long as you own stock in the 3 volt lithium battery companies. For some reason this radio goes through batteries every 3 months. There are
various messages from Kenwood and many people have sent their radios back and forth to Kenwood with no improvement. I would reccomend waiting till Kenwood figures out
the "REAL PROBEM".
The IC-756 will be going up in price to $2400 on January 1st, 1998 to make room for the IC-746 radio. If you want the IC-756 then get it now. OTherwise wait for the IC-746 which is similar with 2 meters allwmode at 100 Watts. NICE.

The FT-920 is nice but beware of all the options Yaesu sticks it to you! You have to pay extra for :CTCSS encoding, FM (please guys), AM filter. To be fair they give you the
PC interface built in for free.

I would reccomend going to a local Ham store and trying them all side by side.

Cheers, Ausin Powers

Yaesu has included a few things in the FT-920 that I did find
useful. It allows four different EQ settings, which do change
the audio considerably.
It also has a built-in digital voice recorder, which I realize is
not for everyone, but I am somewhat of a contester, and I
absolutely love it.
The 920 also will increment serial numbers from it's CW memory
keyer. Another contester plus. Again, I realize it's not for everyone,
but then again, you can't build a radio for "everyone".

Happy Holidays

>The FT-920 is nice but beware of all the options Yaesu sticks it to you!
You
>have to pay extra for :CTCSS encoding, FM (please guys), AM filter. To be
>fair they give you the PC interface built in for free.

Yep, they do get you. But, what is wrong with paying for the AM filter?
Do you get an additional AM filter in either of the other two? Yaesu makes
a free pass-through board to allow tx on AM without the filter.
I have CTCSS encode on my 920 and didn't cost me a dime. The FM
board does cost you $60 bucks though. That is a little cheesy.
The PC interface does work flawlessly. And it also gives you a built-in
digital voice recorder, which used to cost $200+ dollars for the 1000, 990,
890 line.
I am pleased with my 920, and would purchase another.

>I would reccomend going to a local Ham store and trying them all side by

Not true!! This is a resonant frequency for heating water. Nobody's sure why, but it causes the water content of food to heat much faster than other frequencies. That's why microwave ovens use it.

Source record: 158621

I stand corrected. The CTCSS is included with the FT-920 plus Digital Voice
Keyer.
These are usually EXTRAS for other brands so I guess it all evens out.
STILL....Charging
for FM is "cheesy". The AM filter is first rate but I suggest you buy it from
INRAD instead of Yaesu.
The scope on the IC-756 is too slow and as QST say"like choppy seas".

Austin Powers

Dave
SWR on 6M is around 1:1.5 to 1:2 depending on the freq.
Next question did I change or tune anything? NO.
I'm using an ICOM 706 Without a tuner.
Just go with it
I talked to a guy who could use it on 160M.
SWR on 160M is about a zillion to one for me.
Merry Christmas

Since when do you need to know the code to get a ham license? I've got a no-code tech, which was real easy to pass (of course, I had a former FCC First Phone, but what the heck the tech class was really easy. It only took about 4 hours study time to pass the test.

Does anyone know where I can get a service manual (or just schematic)
for a Beckman Industrial Model 9104, 40 MHz Oscilloscope (made in
Korea)? None of the manual outlets seem to have any.
Who does service for Beckman Industrial products? Maybe I could get a
schematic from them. My scope has an intensity adj. problem....too much
beam intensity. I guess I could change the xister near the internal adj.
pot.....but a schematic would be great to have.

Thanks

Mike,

I've looked it up in the service manual for the TS-430s. I found
this:

Pilot lamp 14V, 80mA
Part number B30-0817-15

I think this is the right item; it is listed just above a listing for
"meter" on page 17 of the service manual, left column, 5th line from
the top.

Good luck.

Hi there...

I am looking to trade some or all of the following radios for a 2 Meter/440 Dual Bander with wide-band recieve (including aircraft and 800 MHz).

*Bearcat 200XLT Portbale Scanner - Great portable scanner, covers 29-54, 118-174, 406-512, and GAPLESS 806-956 MHz (yes, including both the mobile and base cellular phone frequencies). Digital PLL tuning, LCD Display, Backlight, and all the other good features you would expect to find in a excellent scanner. Have two batteries, charger, "rubber duck" antenna and manual. One sratch on the back of the unit, but otherwise very much in good condition.

*Realistic HTX-202 2 meter HT - This portable HT covers the 2 meter Ham Radio band, has 5 watts output, DTMF, PL Encode AND DECODE!! Memory channels, backlight, etc. Have all original boxes and manuals, "rubber duck" antenna, two battery packs, one "dry AA" type, and one NiCAD type, charger, PLUS external Speaker/Mic unit. Very good condition.

*Motorola DPC-550 Cellular Flip Phone - No, this is not an ordinary "Cell Phone". This is much more than that. By using a simple jumper (already installed) you can use this unit as a "Cellular Band Monitor", a mobile "Beacon", a wireless link, a "Room Monitor", a pager, and many, many other practical applications, the possibilities are endless. All documentation for these procedures is included. Phone is in EXCELENT condition, barely used at all, comes with Dual Overnight Charger, three batteries, one Car DC Cord, and all ESN/MSN info.

I am looking to trade ALL of the above units for a good, solid, dual band (2 meter/440) HT which has wide band recieve, (800 MHz included) and has at least 4 watts output power. May also trade for another decent item, just email me and we'll see what we can do. BTW, I also have a Realistic HTX-100 10 meter rig with a HF preamp, the radio tunes 26-30 MHz, will only trade for something good. I am located near Philadelphia, PA (South East PA) Thanks.

From: Rick Pemble <pemble@ix.netcom.com>
Message-ID: <67ff9d$q05@dfw-ixnews6.ix.netcom.com>
Source record: 158718

The CID signal is modulated in Bell 202 format (1200 Baud). The Caller ID data is sent between the first and second ring signal.

The ring signal is a 20Hz ring for 2 seconds. 0.5 seconds after the first ring, the CID data is sent.
First 20 bytes of 01010101... for a pre-amble. then 70ms of marks.
data is then: 1 byte of message type, 1 byte message length, 1 byte paramter type, calling name (in ASCII), 1 byte of parameter type, 1 byte of paramter length, the 144 bits of month, day, hour, minute and the calling number. last byte is checksum.

You can visit the Motorola web site and request document DL136/D which is the communications device data handbook. Lookup IC MC145447 which is a CID decoder. They also have a evaluation kit described, along with the CID format

cheers

Hello all,

I need help locating IF filter specs in PRO-36, BC-3000XLT, AR-8000
(manufacturer and part number). Can anyone help?
If someone can help me get a PRO-36 schematic (not available on Radio
Snake's web page) I'd sure appreceate it too.

Please send a copy of your response via direct email too, since I
don't want to lose any responses.
Note: remove the "55" from my email address to get the correct email
address.

Cheers,
Ami

Sean
Comet makes a nice 3 band SMA mount antenna it is about 10 inches
long and really improves the performance of the VX-R1. It is the COMET
model SMA-3 "3 band handy". Give it a try I think you will like it.

Hi Austin,
Well for starters the filter is a mechanical filter and does not have
'poles' as a crystal filter. That particular bandwidth of 2.75 is the SSB
filter. There are many other bandwidths available. The advantage of this
filter is that they have exceptionally steep skirts. The bandwidth stays
pretty close to it's design bandwidth down 40DB or more. The disadvantage
of this filter is it's rather high insertion loss.(10db or better) But that
can easily be made up with the inherent design of the receiver itself.
Hope this helps a little. 73.....Lee W7AX

: to scrawl their name/call on the inside)?

Yep. Much of Amateur Radio has become a hobby consisting of a bunch of
operators of expensive appliances. The tests are a joke - they can be
passed by anyone who can memorize the answers. No knowledge of
electronics is necessary.

1837. Kachina 505DSP- 1st impressions (kinda long)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-20 00:00:00 UTC
From: Ed Picha <edpi@mcs.com>
Message-ID: <349BDD9D.552C@mcs.com>
Source record: 158742

Hey folks...

Thereï¿½s been a bit of interest in the Kachina 505DSP on this newsgroup, so
I thought I would share my experiences with this rig after a few weeks of playing with it. I wonï¿½t dwell on the specs or features since they are fairly well described on the Kachina web page, http://www.kachina-az.com, and in the full page ads in QST.

Overall, the radio performs well, meets all the specs I have been able to test, and is a
real blast to play with. I have gotten used to the tuning scheme of using a mouse to click UP or DOWN on the digit to be changed, and although itï¿½s hard to get used to at first, it does grow on you. I havenï¿½t experienced any problems due to noise generated by the computer or monitor.

Iï¿½ve controlled the radio with two W95 machines (no-name P100 and IBM Thinkpad 760ED laptop) with no problems. Control is very real-time, with no noticeable lag between activating a control and hearing the effect in the radio. The user interface is very intuitive, and it doesnï¿½t take long at all to get comfortable using the radio. You can do most operation either with the mouse or with keyboard. If you get lost, thereï¿½s a ï¿½cheat sheetï¿½ with most of the major single-keystroke commands, and thereï¿½s always the pull-down help that goes into more detail. You can download a demo version of the software that will give you a good feeling for how it works from Kachina'a web site.

I did some basic bench checks, and the radio was well within specs for power-out and receive sensitivity. I plan to do more detailed tests (particularly on receiver performance) when I can get the equipment together at work.

I did my own little PA torture tests by running the radio for 24 hours, CW full power out into a dummy load, keyed by a memory keyer in beacon mode. I also tested continuous duty PA performance by keying in CW mode continuously for 30 minutes. In both tests, there was no power output slump, and the PA temperature stayed under +50 C.

LIKES:
DSP-based noise reduction can be very effective! Likewise the automatic notch.

Ability to tailor transmit audio response is a nice feature. Iï¿½ve gotten many unsolicited positive comments on the general audio quality, both with the speech processor and without.

Spectrum analyzer is useful, and itï¿½s slick to be able to click on a signal you see in the analyzer window and have the radio automagically tuned to that frequency.

I like the idea of a calibrated S-meter that is accurate on all bands. (I checked...itï¿½s well within the claimed +/- 5 dB accuracy). Itï¿½s also nice to be able to configure the S-meter to read in dBm, uV, or S units.

There are two antenna ports that you can assign by band, or use one for transmit and one for receive. This setup accommodates the typical installation where you have a wire antenna for 80/40 and a beam for the higher frequency bands

The squelch operation is neat...there are two modes, level and syllabic. With level, you can set the absolute level for squelch threshold. With syllabic squelch, the radio looks for signals that have characteristics of voice. In case youï¿½re wondering what good a squelch feature is on an HF radio, I use it for scanning of shortwave utility frequencies. Speaking of scanning, it works pretty well too, although the scan speed could be improved. The minimum ï¿½dwell timeï¿½ is 200 mS, so the maximum scan rate is something like 5 channels per second. In addition to scanning the 100 programmable channels, you can scan a programmable frequency range.

The choice of IF filters (Hz):

6000, 3500, 2700, 2400, 2100, 1700, 1000, 500, 200, 100, DATAHI, DATAMED

is OK, and the filters work well. It would have been nice to have continuously variable filtering like some of the external DSP boxes have. The DATA filters are 500 Hz wide, and have center frequencies of 2210 Hz (DATA HI) and 1700 Hz (DATA MED). Center freqs can be moved using IF shift.

Almost everything you could want for interfacing the radio is brought out on three accessory connectors. Connectors are provided for audio/PTT/misc (DB25), antenna tuner (DB9) and external amplifier control (DB15). Nice that they used three different sized connectors so that thereï¿½s no way to screw up by plugging the wrong connector in the wrong jack.

DISLIKES:

The ï¿½whisperï¿½ fan on the PA is noticeably loud and is not thermostatically controlled. Instead it runs all the time. Fan noise is a function of main supply voltage...at 12 V, itï¿½s pretty quiet. By the time you run it at 13.8V, itï¿½s pretty noisy.

Thereï¿½s no FM mode.

Thereï¿½s no low-level RF jacks for transverter operation.

The manual is light, no discussion of operation. However, you can get a good theory of operation section from the Kachina web page and Kachina will send schematics on request. There is currently no service manual

available. By the way, the folks at Kachina have been VERY responsive, both by email and by telephone.

Why doesnï¿½t notch, IF shift, and noise reduction work in AM mode? Also, you have no choice of filtering in AM....6 KHz is it, like it or not.

On CW, you can select right-handed keyer, left-handed keyer or straight key modes. (Nice touch, accommodating paddles wired any which way!) When you select straight key and use an external keyer, it appears that the self-completing feature of the keyer is still active. If you have the external keyer set to a speed that is FASTER than the speed set on the internal keyer, the radio does not follow the external keying very well. The simple workaround is to set the internal keyer speed to max (80WPM) when using an external keyer.

I canï¿½t find a way to generate a continuous TUNE signal short of plugging a good old straight key into the jack.

Antenna tuner is not very robust...not much range of z match, and it would be nice if it could work outside the ham bands. To be fair, they advertise it to be used with VSWRs of 3:1 or less. Looks like it will be easy to interface homebrewed autotuners.
You may as well skip the $239 for the internal tuner and cobble up your own. By the way, the internal tuner is currently sold as a user-installed option by AES. It goes in very easily.

The control software is not smart enough to detect minimized previous versions. If you run more than one version of the control software, the operation becomes very unstable.

A relay was used for TR switching...solid-state switching would have been nice. The relay makes QSK a bit clumsy and noisy, but it does seem to work pretty well (with limited testing) up to about 30 WPM.

Anyway, thatï¿½s my initial take on the 505DSP. So far I like it and Iï¿½m glad I bought it. If you have any specific questions, Iï¿½d be glad to try and answer them.

Hello !!

I like more information of TM 742A KENWOOD. (not documented)

This equipament have a lot of commands not included in owner manual.

You know ?? Email- me please. Thanks

From aveiro@mandic.com.br

All of the phones on the 1.9 Ghz band are 1W-PEP. The only 3 watt
phones are the Full Size mobile/Bag phones used on 860 Mhz. Most if

not all of those are Analog.

My Microwave oven operates on 2450 Mhz 545 Watts.

1840. CHEROKEE AH-50 6M HT

Will the AH-50 receive down to 45.98 without mods? This is the frequency of the local PD. I know the AZDEN HT does this. Please e-mail if you can help.

Thanks

Rich/N2UKB

I have for sale a FT-890 HF-rig with built in ant tuner.
Covers 10 thru 160 meters with gen coverage rcvr.
I am the orignal owner (non smoker) This rig is total mint
it also has the latest diode modification installed in it for the
reciever.This makes a much more quiet reciever and cuts down the
QRN greatly.It was sent back to yeasu to have this done.Everything in
excelent working condition. $900.00 plus shipping. Supplied with
orignal stock mic manual,and boxes. This transciever has all the bells
and whistles.

Phone 215-535-0912 e-mail richar@earthlink.net

Thank you, Rich K3PIQ.

1842. cherokee ah-50 mods??
